

GSA Office of Governmentwide Policy

Federal Fleet Report, Fiscal Year 2009

January 29, 2010

Dear Reader:

We are pleased to present the Federal Fleet Report for Fiscal Year 2009.

The Federal Fleet Report is produced through the Federal Automotive Statistical Tool (FAST), an Internet-based application that collects fleet-related data from Federal agencies. FAST satisfies several distinct but overlapping reporting requirements:

Federal Fleet Report.....General Services Administration
Energy Policy Act Compliance.....Department of Energy
Federal Vehicle Location Reporting.....Energy Information Administration
Agency Fleet Budget Reporting.....Office of Management and Budget

This year's Report reflects additional spending to acquire fuel-efficient vehicles under the American Recovery and Reinvestment Act. The Act provided \$300 million in additional funds for Federal agencies to replace older, less fuel-efficient vehicles with newer, more fuel-efficient ones, while also stimulating the automobile industry. ARRA acquisitions averaged 40 percent better fuel efficiency than the vehicles they replaced. This infusion of fuel-efficient vehicles occurred during fiscal year 2009, so its effects may not be fully apparent until 2010 and beyond. The scope of the effort is revealed in Table 2-9 (page 34) with over 15,000 more vehicles purchased and \$322 million more spent than in 2008.

Copies of this and previous Reports are available through our Internet site at <http://www.gsa.gov/vehiclepolicy>. Please feel free to contact us at vehicle.policy@gsa.gov if you have any questions about the Report, or would like to offer comments or suggestions on its content.

We trust that this year's report will be of value to you.

Executive Summary

Overview

Federal departments, agencies, and their contractors use motor vehicles to perform their missions. These vehicles, totaling more than 652,000 for Fiscal Year 2009, are obtained from three primary sources: agency purchase, lease from the GSA Fleet Program, or commercial lease. This report presents inventory, utilization, costs, and fuel use associated with the Federal motor vehicle fleet. The data in this report are summarized by:

- Overall Federal Fleet Profiles
- Inventory
- Cost
- Utilization
- Fuel

The data are also displayed by vehicle type, and in some instances, by location (foreign vs. domestic). Overviews of tabular data are also displayed in graphical charts for the current year and 5-year trends.

Privately-owned motor vehicles used by Federal employees on official business are not included in the Federal Fleet Report, nor are short-term commercial rental vehicles (used less than 60 continuous days).

Background

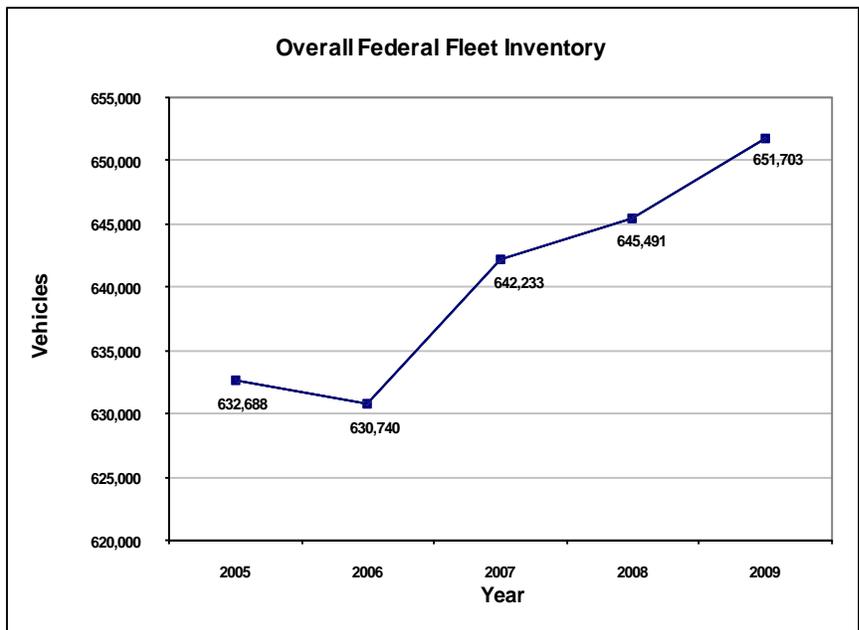

The report summarizes statistical data by passenger-carrying vehicles, trucks, and all other vehicle types. Data are further summarized by characterizing each agency’s vehicles by civilian, military and U.S. Postal Service, and in some instances, by vehicle source and location (domestic vs. foreign). Vehicle types identified in the report include:

- Sedans and station wagons
- Passenger vans
- Sport utility vehicles
- Light trucks (4x2 and 4x4)
- Medium trucks
- Heavy trucks
- Ambulances
- Buses

Major Federal Fleet Trends

Worldwide Motor Vehicle Inventory

The Federal government’s worldwide fleet grew by nearly 1 percent in fiscal year 2009. Agencies with inventory increases were led by the Departments of Agriculture (3,925), Homeland Security (3,340), State (1,574), and Justice (1,547). Offsetting them with sizable reductions were the Air Force (-3,250) and Postal Service (-2,912). Other agencies gained and lost inventory in smaller numbers. Much inventory fluctuation from year to year is normal and simply reflects the timing of vehicle acquisitions and disposals. Nevertheless, there is clearly a persistent slow growth in the overall fleet over the last three years.

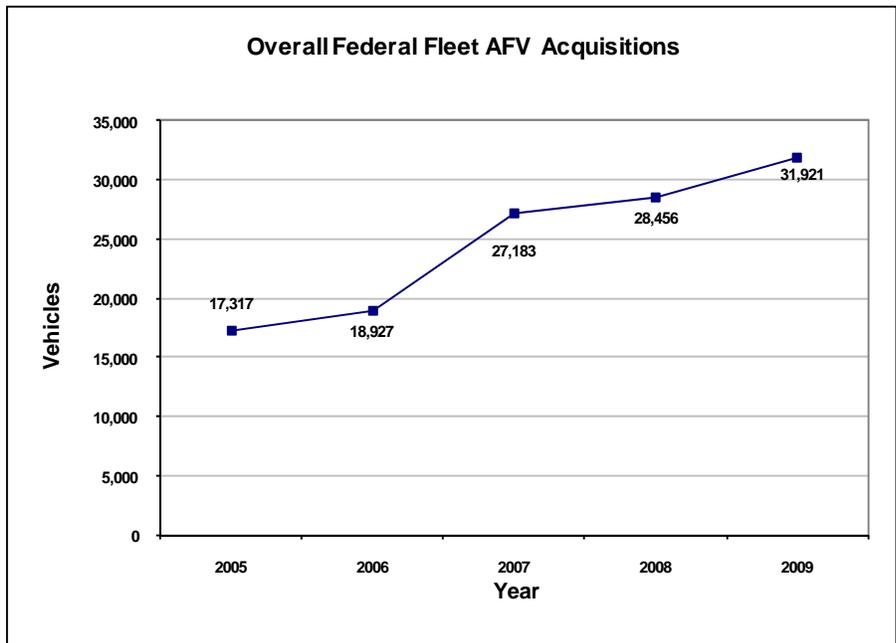

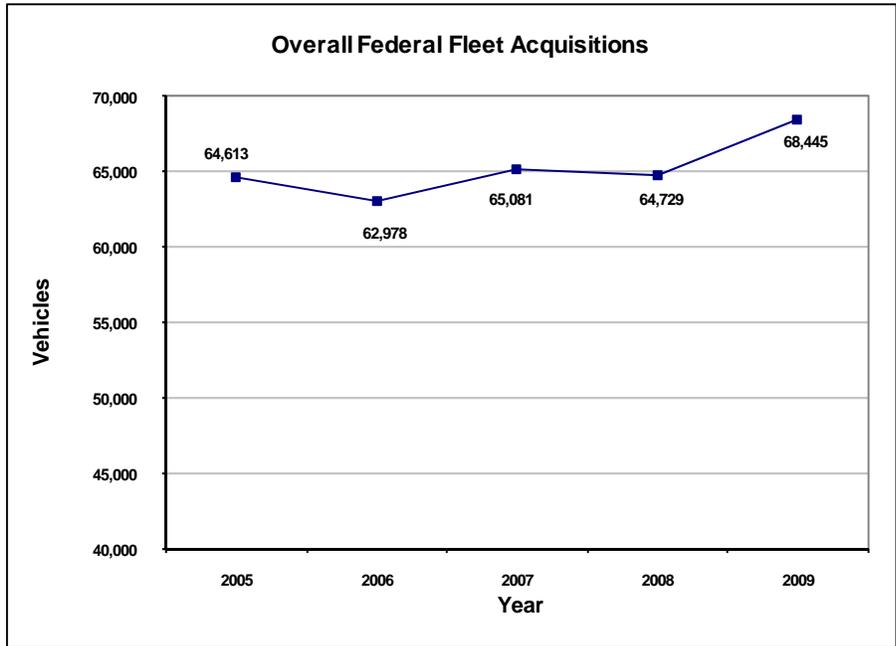

Motor Vehicle Acquisitions

These two graphs depict vehicle acquisitions in general and acquisition of alternative fuel vehicles in particular. Overall acquisitions were up sharply, by 3,716 vehicles or nearly 6 percent. A better indication of vehicle purchases is found at Table 2-9 on page 34, which shows 15,641 more purchased in FY 2009 than in FY 2008. AFV acquisitions increased by 3,996 vehicles or 14 percent.

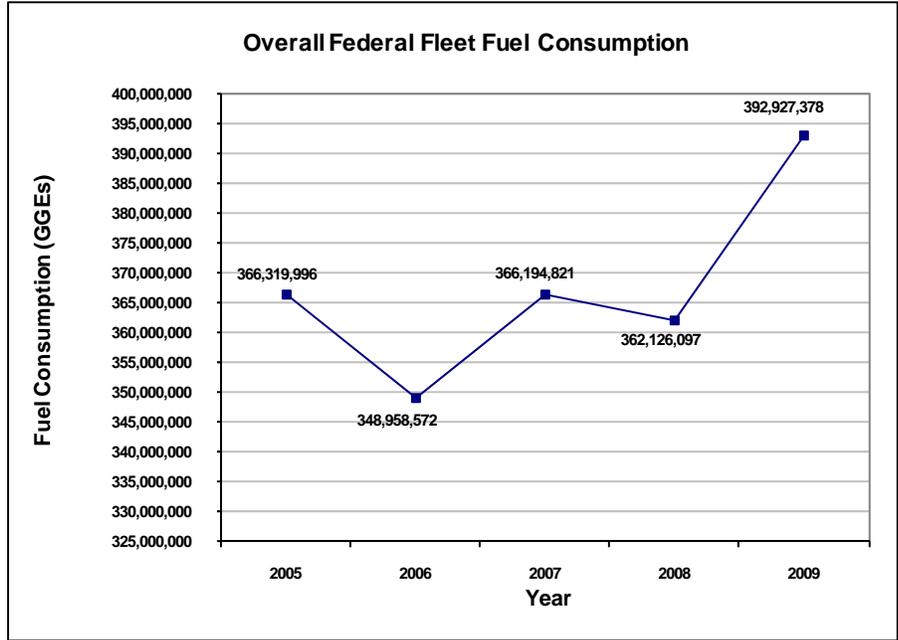

Acquisition of gasoline-fueled vehicles, after declining for five consecutive years, had a slight (2.8 percent) uptick. The redefinition of hybrid electric vehicles from gasoline to alternative fuel noted below (see Other Items of Note) had the affect of reducing what would have been a larger increase. E-85 acquisitions experienced slight but statistically insignificant growth. The reclassification of hybrid-electrics, both gasoline and diesel, accounted for 3,963, which is most of the increase in AFV acquisitions.

A two-year trend away from SUVs was reversed, with SUV inventory climbing by 4,971 vehicles, a 7.4 percent increase. Relief from high fuel prices probably played a part. Law enforcement activities continue to contribute most to fleet growth in the SUV category.

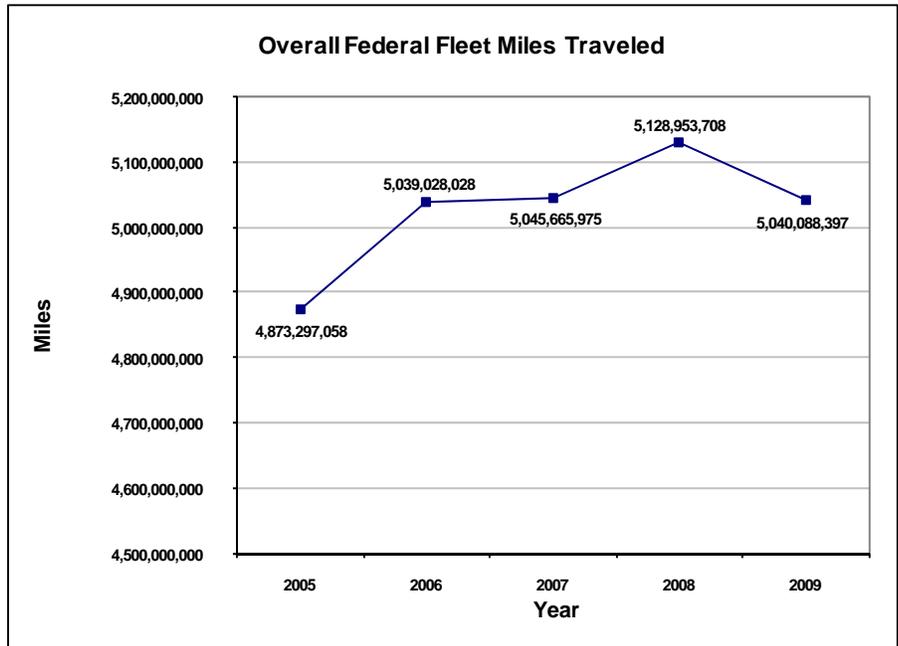

Total Fuel Consumption

Total fuel consumption of the Federal fleet is shown increasing by a surprising 30.8 million gasoline gallon equivalents, an 8.5 percent jump. However, while this Report was being prepared for publication we learned about possible errors in fuel consumption data reported for the years 2005-2008. Fuel consumption for those years may have been understated, so 2009 fuel consumption may not have increased to the extent shown. See A Note About Data Quality and Consistency on page 7 for more information. Agencies continue to experience difficulties in collecting and reporting accurate fuel consumption data, and progress in improving the data from commercial charge card processes and agencies' fleet management information systems is slow.

Worldwide Miles Traveled

In 2009 total miles traveled declined by nearly the same percentage as they increased in 2008, about 1.7 percent. The same possible errors in prior year fuel consumption data may have affected miles traveled, although not to the same extent. Miles traveled may not have declined to the extent shown. See A Note About Data Quality and Consistency on page 7 for more information. It seems that the spikes in fuel consumption and total miles traveled are not as dramatic as they appear.

Worldwide Operating Costs

Reported operating costs in 2009 declined by over \$250 million, or 6.3 percent. This reflects the moderation in petroleum prices that had such a catastrophic impact in 2007-08. Fuel remains the principal driver of fleet cost. This decline is consistent with relative stability in fuel use and utilization from 2008 to 2009, after accounting for the reporting issues that may affect pre-2009 data (see A Note About Data Quality and Consistency on page 7).

FAST Data Trends

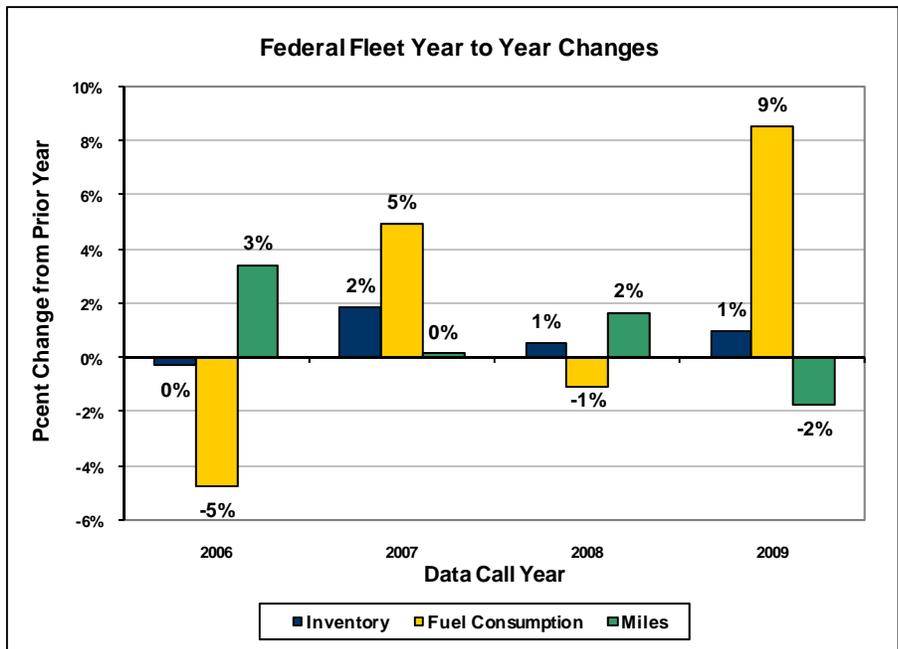

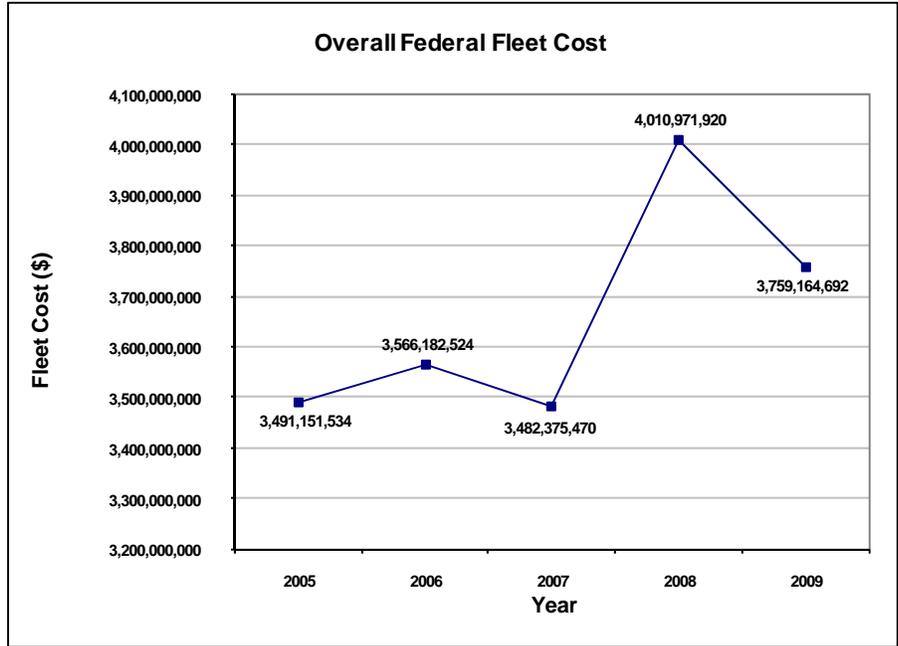

One normally expects to see inventory, fuel consumption, and miles traveled moving together. See A Note About Data Quality and Consistency on page 7 for an explanation of possible problems with prior year data that may be the source of some of the anomalous movement in 2009 in the areas of fuel consumption and miles traveled.

We continue to see more agencies implementing automated systems that report data to FAST without significant human intervention, which should reduce errors. Eventually the majority of agencies, particularly the large ones, will report to FAST through automated systems.

On the other hand, we continue to be concerned with the slow progress in resolving coding inconsistencies in the credit card transaction process, a longstanding problem that makes it difficult to accurately report total fuel consumption and segregate various types of fuel purchases.

Other Items of Note

The 2009 Federal Fleet Report incorporates a change in vehicle category definitions: following a reclassification by the Department of Energy that affects reporting under the Energy Policy Act, hybrid-electric vehicles are now classified as alternative fuel vehicles where previously they were shown as conventional vehicles. They are broken out separately in the affected tables and charts. Although this change complicates comparisons with prior years, it is a more accurate and consistent presentation of the data.

Tables and charts that show data for GSA Fleet reflect what the reporting agencies indicated about their use of GSA Fleet vehicles. Agency-reported data may vary from GSA Fleet's own data for a variety of reasons, and should not be taken as an accurate reflection of GSA Fleet's operation.

A Note About Data Quality and Consistency

We have been notified that incorrect data may have been reported for current or prior years. These data are under review and may be subject to revision in future reports. Users of this report should take this into account when performing analyses, especially those involving fuel consumption and miles traveled.

Section 1: Overall Fleet Profiles

Section 1 provides a high-level look at the worldwide Federal fleet. It contains tables that cover inventory, cost, utilization, and fuel consumption. Each succeeding section provides more detailed tables, charts, and graphs on these areas. Section 1 ends with a table that summarizes each area in one comprehensive view.

Section 2: Inventory

This section provides additional information to supplement Table 1-1. In addition to end-of-year inventory, it also provides 5-year trend charts, as well as information on where agencies acquire their vehicles (purchase, commercial lease, or GSA Fleet lease).

Passenger vehicles and trucks are broken down into their constituent vehicle types, as are law enforcement vehicles. Again, the passenger vehicle category now includes vehicles other than sedans and station wagons that are used primarily or exclusively to transport passengers, such as passenger vans and sport utility vehicles (SUVs).

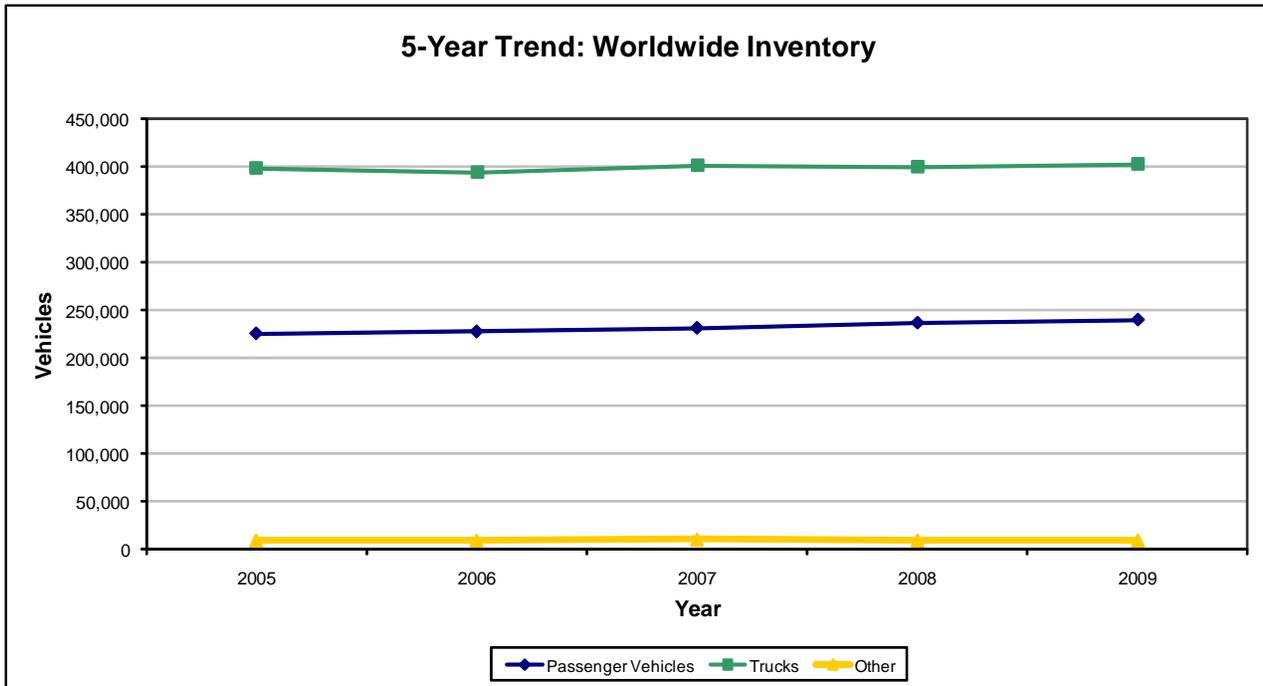

The division between light duty and medium duty for SUVs and passenger vans is a gross vehicle weight rating (GVWR) of 8,500 pounds, as specified in the Clean Air Act and the Energy Policy Act.

Charts 2-7, 2-8 and Tables 2-7 and 2-8 show the federal inventory of law enforcement vehicles. It should be noted that this category is intended to reflect only vehicles with actual law enforcement missions; it does not reflect administrative-use vehicles used by agencies with a law enforcement mission.

*These data come from GSA Automotive. Procurements by GSA Automotive capture most, but not all, Federal executive vehicle procurements. GSA reports procurement actions in terms of orders placed, not shipments or deliveries made, so these figures will not necessarily match new acquisitions as reported by agencies in FAST. In some cases agencies for which GSA Automotive reports procuring vehicles differ from the agencies reporting in FAST. Finally, GSA Automotive reports vehicles it acquired for the GSA Fleet program under GSA, whereas elsewhere in this Report they are reported by the leasing agency.

* These are agency-owned vehicles only, not commercially leased or GSA Fleet vehicles.

Section 3: Cost

Section 3 expands on the information provided in Table 1-2.

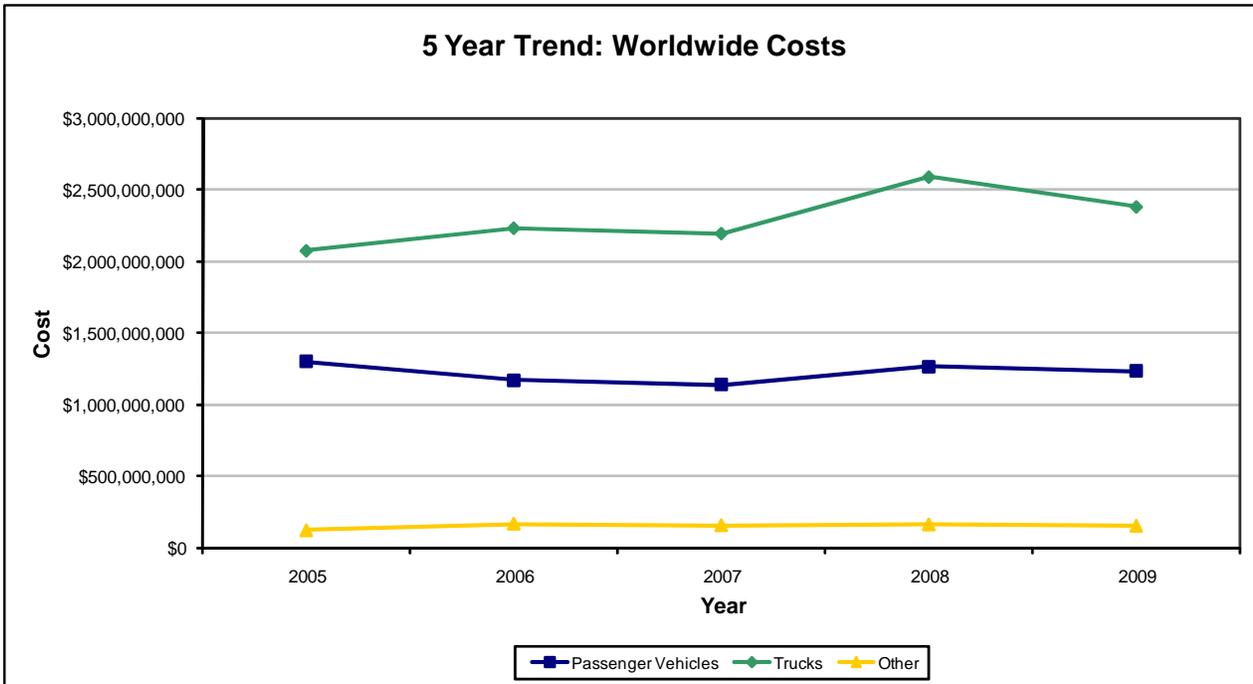

Other costs collected and represented in this section include fuel, maintenance, indirect costs, commercial lease cost and GSA lease cost. Maintenance includes the cost of maintaining and repairing vehicles, including maintenance personnel, parts, supplies, and equipment. Indirect costs include management and overhead personnel, office supplies, building and utility costs, and any other costs that cannot be directly attributed to the operation or maintenance of vehicles. Commercial lease cost includes the lease charges paid to commercial leasing companies. GSA Lease cost is the total amount billed by GSA Fleet to its customer agencies, which includes fuel. Fuel costs for agency owned and commercially leased vehicles are not collected by vehicle type and are therefore shown as a single cost item in the Totals section in Table 3-2. All costs in this report are shown in U.S. Dollars.

This section also reveals some of the inconsistencies in the data that the agencies have reported through FAST. In some cases, it may not be possible to calculate the cost per mile, or miles per vehicle using the raw data from other tables in the report. The inconsistencies arise from agencies who have reported inventory and cost, but no miles, or miles, but no costs for certain vehicle types. In these situations, the data rows in the miles per vehicle and cost per mile tables for that agency and vehicle type will be blank.

Section 3: Cost

Chart 3-3: Cost Per Mile – Overall*

Cost Per Mile by Year					
Vehicle Type	2005	2006	2007	2008	2009
Passenger Vehicles	\$ 0.5610	\$ 0.4757	\$ 0.4555	\$ 0.4975	\$ 0.5055
Trucks	\$ 0.8454	\$ 0.8973	\$ 0.8892	\$ 1.0335	\$ 0.9428
Other	\$ 1.1198	\$ 1.7559	\$ 1.7395	\$ 1.8378	\$ 1.7536
Overall	\$ 0.7164	\$ 0.7077	\$ 0.6902	\$ 0.7820	\$ 0.7459

*Cost per mile is shown here and in the next few tables and charts because it is one of the primary fleet management performance measures. However, the data displayed here are among the most ambiguous in this report. Agencies do not report cost per mile directly, but report costs and miles separately. Cost per mile is then computed based on these separate entries. In some agencies they may be reported by different offices at different levels of the organization using different sources of data. Problems with mileage and, more significantly, with cost are thus magnified in the cost per mile calculation. Standards for capturing cost in particular vary widely among Federal agencies. Consequently these data should be used with caution.

Section 5: Fuel

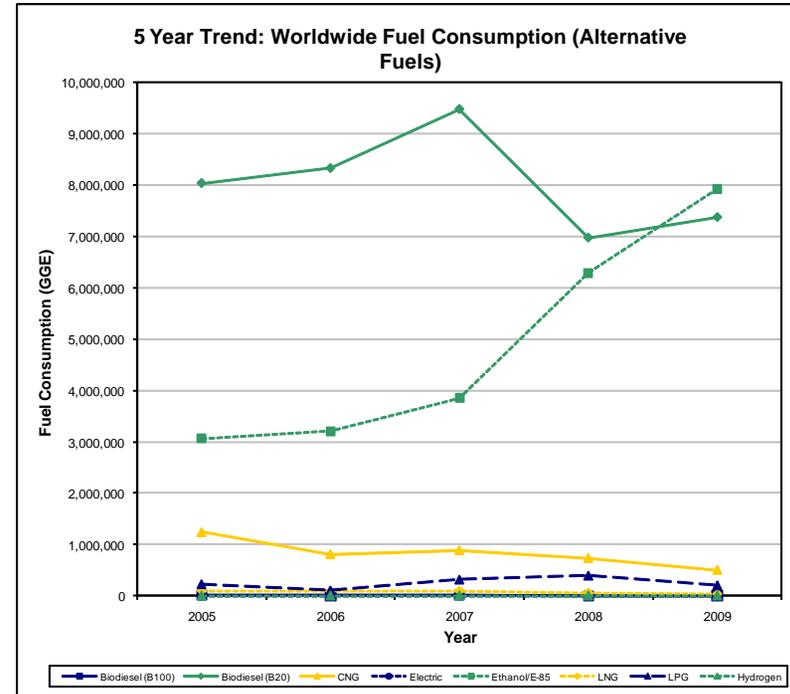

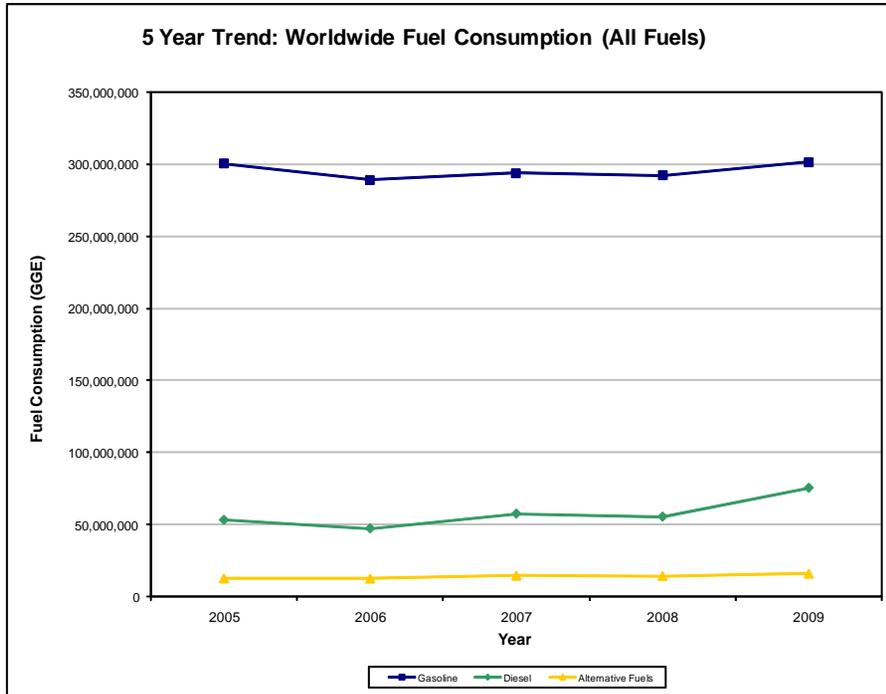

This section shows information on the use of fuel, conventional and alternative, in the Federal Fleet.

For a variety of reasons, agencies have difficulty capturing and reporting accurate fuel data. This is in some measure due to the lack of comprehensive fleet management information systems in agencies, but more fundamentally reflects problems in the charge card processing chain for fuel purchases. The industry does not currently insist on standardized data in the processing of charge card purchases of fuel and other products from service stations. Consequently data from charge card purchases of fuel often misstates the type of fuel purchased, or may fail to include quantity purchased. Efforts to address this issue have been underway for over a decade, but little progress has been made.

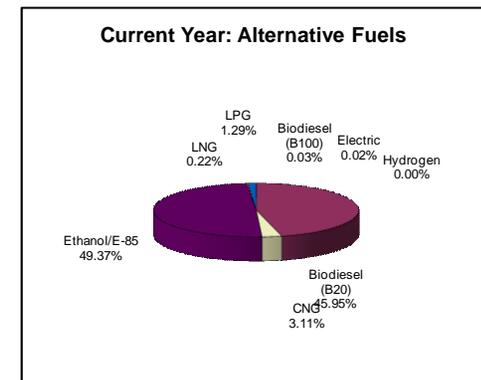

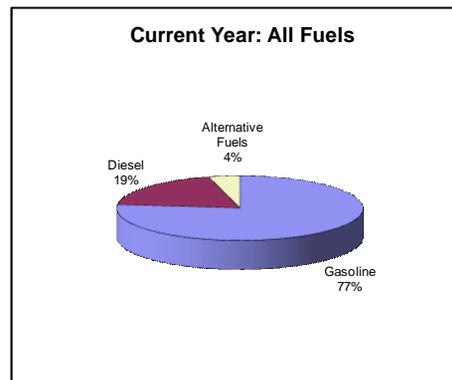

The tables and charts in this section, for the first time, include hybrid electric vehicles that were previously classified as petroleum-fueled. In Charts 5-3 and 5-4 and Tables 5-3 and 5-4 they are broken out separately, which should help to make clear the magnitude of the change's impact. We have made this change in order to maintain consistency with the Department of Energy's recent reclassification of these vehicles as alternative fueled.

*This table represents the acquisition of vehicles of each fuel type as reported by the agencies, and is the source of the line graph in the Executive Summary on page 4. Total purchases are better represented in Table 2-9, GSA Vehicle Procurement, on page 34. The data on this page are intended to represent all vehicles coming into an agency's fleet during the fiscal year from whatever source: purchase, GSA Fleet lease, commercial lease, or other. Although orders for vehicles purchased under the Recovery Act were placed in FY 2008 agencies may not have taken delivery until after the end of the fiscal year. All orders placed under ARRA during FY 2008 are included in the GSA vehicle procurement data in Table 2-9.
