

Water Efficient Product Procurement Decision Tree

Why buy water efficient products?

The Federal Government's policy is to acquire supplies and services that promote water efficiency and help foster markets for emerging technologies, as specified in FAR 23.202. This decision tree will help facility / project managers and contracting personnel / P-Card holders comply with this policy. It will allow them to make informed procurement and product purchase decisions that both save money and contribute to GSA and Federal water performance goals under EISA of 2007, EO13423, and EO13514. It can guide the process needed before an opt out justification can be considered.

Who should use this Decision Tree?

This decision tree is for facility / project managers and contracting personnel, including P-Card holders, with responsibility over building construction, renovation, retrofit, operations and maintenance, and repair duties.

For Facility / Project Managers

For Contracting Personnel / P-Card Holders
