PROSPECTUS – CONSTRUCTION
U.S. LAND PORT OF ENTRY
COLUMBUS, NM

Prospectus Number: PNM-BSC-C016
Congressional District: 2

FY 2016 Project Summary
The General Services Administration (GSA) requests approval for construction of new replacement land port of entry (LPOE) facilities in Columbus, NM. The project will expand the facilities to safely and efficiently accommodate steady increases in car, truck and pedestrian traffic as well as incorporate extensive site improvements to address significant stormwater drainage issues at the port.

FY 2016 House Committee Approval Requested
(ECC and M&I) $85,645,000

FY 2016 Senate Committee Approval Requested
(ECC and M&I) $26,047,000

FY 2016 Appropriation Requested
(ECC and M&I) $85,645,000

Overview of Project
The Columbus LPOE was built in 1989 to screen visitors entering the United States. Existing building workspace and inspection facilities do not meet the tenant agency’s operational need. The tenant has identified a current requirement of 69,243 gross square feet of building space; however, the existing facility provides 21,370 gross square feet. The project will consist of expanding existing facilities to handle future traffic volumes predicted for this port and site improvements to control stormwater flow.

1 GSA has worked closely with DHS program offices responsible for developing and implementing security technology at the LPOEs. These programs include Radiation Portal Monitors (RPMs), Land Border Integration (formerly Western Hemisphere Travel Initiative (WHTI)), Non-Intrusive Inspection (NII), Outbound Inspection, and Port Hardening/Absconder programs. This prospectus contains the funding of infrastructure requirements for each program known at the time of prospectus development since these programs are at various stages of development and implementation. Additional funding by a Reimbursable Work Authorization (RWA) may be required to provide for as yet unidentified elements of each of these programs to be implemented at this port.
The project includes construction of a new main building, commercial and non-commercial primary and secondary inspection facilities, pedestrian processing, an outbound canopy, export facilities, non-intrusive inspection systems, hazardous materials containment area, a new earthen berm and drainage basin, and enlargement of an existing culvert. The project also includes outside vehicle parking and a kennel. Additionally, requirements of the Federal Motor Carrier Safety Administration are addressed in the project with relocation of an existing canopy structure and building and new paving.

### Site Information

- Government-Owned: 14.72 acres

### Building Area

- Building (including canopies): 69,243 gsf
- Building (excluding canopies): 48,415 gsf
- Outside parking spaces: 106

### Cost Information

- Site Development Costs: $37,412,000
- Building Costs (includes inspection canopies) ($609/gsf): $42,188,000

### Project Budget

- Additional Design (FY 2014): $7,400,000
- Estimated Construction Cost (ECC): $79,600,000
- Management and Inspection (M&I): $6,045,000

**Estimated Total Project Cost (ETPC)**: $96,383,395

* Tenant agencies may fund an additional amount for emerging technologies and alterations above the standard normally provided by the GSA.

---

2 The project may contain a variance in gross square footage from that listed in this prospectus due to changes in the CBP Design Guide.

3 Site development costs include grading, utilities, paving, demolition of existing facilities, drainage ponds and culverts (including piping and structures), lighting, and fencing.

4 The additional design funds are needed to reflect updated agency requirements since design was originally authorized and to incorporate extensive site improvements needed to address significant storm water drainage issues at the port.

5 Costs have increased since approval of Prospectus No. PNM-BSC-CO14 due to labor and materials market increases (example: booming oil and gas market in west Texas has affected most costs including plumbing/piping, steel, concrete, electrical, road work).
Location

The site is bordered on the west by New Mexico State Highway 11 and on the east by a bypass road, approximately 3 miles south of the village of Columbus, New Mexico, adjacent to the city of Palomas, Mexico.

Tenant Agencies

Department of Homeland Security – Customs and Border Protection, Immigration and Customs Enforcement; U.S. Department of Agriculture – Animal & Plant Health Inspection Service, Plant Protection and Quarantine; U.S. Food and Drug Administration; Department of Transportation – Federal Motor Carrier Safety Administration; and General Services Administration.

Justification

Since its construction in 1989, screening of visitors at the Columbus LPOE has increased significantly and advances in technology have led to significant changes in the inspection process. The LPOE continues to experience an increase in commercial traffic, with anticipated additional growth over the next 15 years.
Efforts are underway by the Government of Mexico to relocate port facilities south of the border further east. The construction of a bypass road to access these new crossings was completed in 2011. New commercial traffic circulation resulting from the addition of the bypass road will be accommodated in the port expansion project.

The LPOE has experienced significant flooding during high volume rainfall events. In the past decade, the area has been inundated multiple times which has subsequently elevated the flooding problem to the attention of both the U.S. and Mexican Governments and the State of New Mexico. Improvements to the LPOE will protect new and existing structures, retain all new onsite storm water, and convey storm water flows across the site. The proposed site drainage and grading improvements have a significant cost; however, the work is necessary in order for the project to proceed and for the LPOE to maintain operations.

**Summary of Energy Compliance**

The project will be designed to conform to requirements of the Facilities Standards for the Public Buildings Service and implement strategies to meet the Guiding Principles for High Performance and Sustainable Buildings. GSA encourages design opportunities to increase energy and water efficiency above the minimum performance criteria.

* Approvals to Date include $709,395 via the American Recovery and Reinvestment Act of 2009 (ARRA); authorization is inherent in the Public Law (PL 111-5 – Recovery Act).

Alternatives Considered

SA owns and maintains the existing facilities at this port of entry; thus, no alternative other than Federal construction was considered.

Recommendation

CONSTRUCTION
Certification of Need

The proposed project is the best solution to meet a validated Government need.
