Hello there,

I'm wrestling with URL shorteners for internal gov links, specifically those within the Microsoft Cloud.

VA SharePoint sites are migrating to SharePoint Online within the Microsoft Cloud and those links aren’t accepted by the usa.gov shortener. For example a VA SharePoint URL like https://dvagov.sharepoint.com/sites/VHAPugResearch... isn’t accepted because the URL isn't a valid .gov/.mil/etc URL. On the other hand dvagov.sharepoint.com *is* a legit government domain within the Microsoft cloud. It's a new wrinkle and I'm wondering what to recommend to colleagues.

If usa.gov is out and the internal VA.gov shortener is dead, are there other gov supported ones out there?

Thank you for your consideration.

Laura Rabuck (she/her)

Hello!

We've been experiencing issues with the OPM operating status API. We've tried contacting the Developer Center multiple times without any response. Does anyone have a direct contact to an OPM developer who can assist us?

Thanks!

Hi Content Managers!

Today on the [USAGov blog](http://www.usa.gov), find out how we used free web analytics tools to discover scammers who were creating fake versions of [USA.gov](http://www.usa.gov). These swindlers were trying to trick people into sharing their personal information and buying access to phony government grants. See how we got them stopped.

We’re always discovering new ways to use data and technology to connect people with their government. We’d love for you to learn along with us, and [subscribe to the blog](http://www.usa.gov).

Thanks,

Nancy

You have been invited to the following event.

**Web Managers Community Huddle**

When: Tue Nov 17, 2020 3pm – 3:45pm Eastern Time - New York

Calendar: content-managers-l@listserv.gsa.gov

Who: (Guest list has been hidden at organizer's request)

Join me for the latest Web Managers Community Huddle. This will be an informational meeting for open and organic information exchange.

The topic for this huddle will be **21st Century IDEA reporting** with guest hosts Rachel Flagg, Tori Garten, and Christen Geiler.

By mid-December, all federal executive branch agencies must submit their second annual report on progress implementing **21st Century IDEA**. See, for example, GSA's 2019 report on its progress in implementing 21st Century IDEA at [gsa.gov/digitalstrategy](http://gsa.gov/digitalstrategy).

Coordinate your reporting efforts with your agency CIO and Federal Web Council rep.

You will need to accept this invite to join the huddle. Please also let me know if you need any accommodations to fully participate in this meeting.

Hi!

We're looking for some research that estimates what percentage of government data is structured (vs. unstructured or semi-structured). I haven't had much luck with general Google searches, and am wondering if anyone in this community is aware of research in that vein.

Thanks in advance!

Sarah

What problem are you trying to solve? Submit an idea to 10x!
Greetings, colleagues!

Many times we check UP on a project status or check WITH someone about it. All good things to do especially in these days of remote working. Let's check IN.

Have you reached a milestone? How have you developed professionally as a result of that project so far? How do you think that subsequent milestones can contribute to your future professional development? Please share!

I am attempting to find out which agencies are using Unsplash.com either as a consumer or contributor or both. VA blocks access due to 3rd-party’s incorrect categorization of the service as “Cloud Storage and Backup.” We have attempted several times to get the service to recategorize, but they will not.

Hello,

I believe main commerce (commerce.gov) uses it and approved it for use by sub-agencies (we are a sub-agency, but we have another stock photo contract, so we don’t use Unsplash at our agency.)

Hope that helps!

There's a USGS Unsplash page, but we do not have an account or manage that page. In an effort to boost interest in Unsplash, the Unsplash team had created a page to pull in various images, marked as public domain, to the page. Originally, they had included our trademarked USGS Identifier. I had to tell them they were illegally using our trademark and they quickly remove it and replaced it with a USGS-related image. They also modified the intro for that account because it read as if it was managed by us. While I do wish the intro was more specific, I'm not opposed to people getting images from that site that are USGS images. They're in the public domain and USGS does get credit.

I know a few of us at the VA OIG used it and similar sites ([https://pixabay.com](https://pixabay.com), e.g.) mostly for use on our intranet until the VA blocked it.

I'm always leery of sites like Unsplash as they seem too good to be true. Free photos? Great but how are they making their money? Or am I just too cynical?

Do they require any attribution? A couple of years ago, we used an image (a rather simple and tasteless, too, but fitting the narratives) from a free source. A few weeks later we were fined by the image owner's attorney. We began digging deeper and saw a long convoluted text (fine print, too). Somewhere in the very end they requested an attribution to the image. If it wouldn't be so time consuming to read and if the site we downloaded the image from would not make the "free" assertion so loosely, we would have noticed the request and given the attribution... anyway, ever since we stopped using the "free" stuff. Reading their long disclaimers is not free, it's our time. But, if it would be VERY TRANSPARENT with no attribution requested EVER, we'd reevaluate.

brings up a good point. At my agency, only our procurement team have the authority to accept commercial ToS and approve a site for use. Even if I wanted to use a site like Unsplash, I'd first have to get it blessed by my procurement team even if it doesn't involve funds.

Why? Because— and please correct me if I'm wrong here— my limited understanding of copyright law is that there's no such thing as an irrevocable right. Someone always owns the work, and that person is always within their rights to revoke any such agreement. While it would be difficult for anyone to collect rights fees should they revoke our right, they could easily require us to remove the works for future use without payment. Will they revoke them? Who knows, but my fear is always that you get what you pay for.

I'm always leery of sites like Unsplash as they seem too good to be true. Free photos? Great but how are they making their money? Or am I just too cynical?
I am attempting to find out which agencies are using Unsplash.com either as a consumer or contributor or both. VA blocks access due to 3rd-party’s incorrect categorization of the service as “Cloud Storage and Backup.” We have attempted several times to get the service to recategorize, but they will not.

Hello Federal Web Content Managers:

EPA has a requirement to take snapshots of all our web properties before each inauguration and make them publicly available to help address any requests for information about changes made by the incoming administration. We have a solution for our primary Drupal-based website (www.epa.gov), but EPA has many other domains and subdomains built on a variety of different technologies. Does anyone know of any website snapshot solutions that work across domains and subdomains built on different platforms?

Thanks,

Lin

Some of the possible solutions are: archiving the old pages, creating a new version of the existing page (with all the previous versions saved), unpublishing (keeping them in a draft shape) old pages.

Chrome has a nice screenshot function, but I wouldn’t know how to automate it. Still, it might be useful to folks.

In Google Chrome running on Windows:
- Ctrl+Shift+I (Developer Tools)
- Ctrl+Shift+P (Run command)
- Scroll down to “Screenshot” (there are four options)

Brian:
Here is an example of the type of “snapshot” I’m talking about - https://19january2017snapshot.epa.gov/
This is a snapshot of the EPA website as it existed on January 19, 2017. We don’t update it and some of the links don’t work, but we keep it online for historical purposes. I’m asking if any other agencies are doing something similar.

All:
Thanks for the helpful information you have shared so far. Additional ideas are welcome.

Thanks,

Lin

I worked on DOC’s transition last administration change, and what you describe seemed pretty par for the course. Each time there a major change we would take a web snapshot and place it in an archive.

I don’t know if this link will work for those outside of Commerce, but here’s all the instructions we put out last time for web and social during the transition: https://connection.commerce.gov/reference-and-other-resources/doc-social-media-transition-resources

At my sub agency, I’m planning to use that as a model for this go-round.

Hi everyone –
I'm looking for the wonderful person who shared a Drupal content type visual library – I believe it was in an airtable – for a site they built for VA. I keep talking about this and trying to describe it because I very much would like to make one for our organization and people here don't seem to be picking up what I'm putting down – I think they really need this visual example. If you created this beautiful artifact and are willing to share it again, would you please contact me? 😊
Thank you!
Jeanine

Hi Jeanine,

I just forwarded your question to Jane Newman, I believe she is the person who sent over that airtable.

Best,

Victoria

Subject: [CONTENT-MANAGERS-L] Are you taking snapshots of your websites in preparation for the administration change?

Hello Federal Web Content Managers:

EPA has a requirement to take snapshots of all our web properties before each inauguration and make them publicly available to help address any requests for information about changes made by the incoming administration. We have a solution for our primary Drupal-based website (www.epa.gov), but EPA has many other domains and subdomains built on a variety of different technologies. Does anyone know of any website snapshot solutions that work across domains and subdomains built on different platforms?

Thanks,

Lin

Previous administrations have requested this to allow for content from outgoing administrations to persist, but have a site with current admin priorities.

HTTrack (https://www.httrack.com) was very useful in creating a full copy of sites we ended up needing to archive. It may be old school, but it works like a charm. Examples of what we have done in the past include https://archive.mbda.gov and https://2014-2017.commerce.gov.

I worked on DOC’s transition last administration change, and what you describe seemed pretty par for the course. Each time there a major change we would take a web snapshot and place it in an archive.

I don’t know if this link will work for those outside of Commerce, but here’s all the instructions we put out last time for web and social during the transition: https://connection.commerce.gov/reference-and-other-resources/doc-social-media-transition-resources

At my sub agency, I’m planning to use that as a model for this go-round.

We had built our own archiving system a few years back. The big problem with doing your own snapshots is that they will still require security patches. This became such a burden since we were capturing all our sites on a monthly basis. About three months ago we shifted to Archive-it.org. This is a great tool for archiving your sites and the paid version provides a lot more control over the way back machine. After doing a cost comparison it actually was cheaper for us to use this service over continued use of an in house system due to server administration and security requirements.

The snapshot is not a legal or regulatory requirement. We created it in anticipation of a barrage of FIOA requests for information about what the incoming administration changed on EPA's website. It proved to be very helpful.

It sounds like you are looking for a web archiving tool. There are a few out there including Archive-It (from the Internet Archive) and Archive Ready (open source). You can find more with a search.

The Creating Preservable Websites page from the Library of Congress may also be helpful when preparing your site. And while it doesn’t solve your immediate need, the End of Term Web Archive captures and saves federal websites at the end of presidential administrations.

I worked on DOC’s transition last administration change, and what you describe seemed pretty par for the course. Each time there a major change we would take a web snapshot and place it in an archive.

I don’t know if this link will work for those outside of Commerce, but here’s all the instructions we put out last time for web and social during the transition: https://connection.commerce.gov/reference-and-other-resources/doc-social-media-transition-resources

At my sub agency, I’m planning to use that as a model for this go-round.

Hello Federal Web Content Managers:  

EPA has a requirement to take snapshots of all our web properties before each inauguration and make them publicly available to help address any requests for information about changes made by the incoming administration. We have a solution for our primary Drupal-based website (www.epa.gov), but EPA has many other domains and subdomains built on a variety of different technologies. Does anyone know of any website snapshot solutions that work across domains and subdomains built on different platforms?  

Thanks,  

Lin

I worked on describing this process for govies, too.

https://www.youtube.com/watch?v=dNviJeE2Z7k&list=PL60zYEq1EauyfezdAzgOhGhmBjSTw9YS&index=11

Dave Watts update the work with additional resources but I don't know if he's done a new video on it yet. If you'd like to ask him, feel free in reaching out to me and I will do a connecton for you with him.

Drupal GovCon (thanks Tim Wood) also scrapes and then archives the entire site and we have been since either 2014 or 2015. They are stored on Github pages.

If there is enough interest, we could probably do a Drupal4Gov webinar on this topic as an extra webinar.

Previous administrations have requested this to allow for content from outgoing administrations to persist, but have a site with current admin priorities.

HTTrack (https://www.httrack.com) was very useful in creating a full copy of sites we ended up needing to archive. It may be old school, but it works like a charm. Examples of what we have done in the past include https://archive.mbda.gov and https://2014-2017.commerce.gov.

Larry
Hello Federal Web Content Managers:

EPA has a requirement to take snapshots of all our web properties before each inauguration and make them publicly available to help address any requests for information about changes made by the incoming administration. We have a solution for our primary Drupal-based website (www.epa.gov), but EPA has many other domains and subdomains built on a variety of different technologies. Does anyone know of any website snapshot solutions that work across domains and subdomains built on different platforms?

Thanks,

**Lin**

Hello,

Anyone able to point me to an SME about the snazzy new search interfaces on beta.regulations.gov?

My agency is looking to point people coming to our site over to regulations.gov for various comments and rules, and no longer create a second, duplicative, not-as-robust copy of all that info on uspto.gov. Some folks at the agency were concerned that "regulations.gov is hard to search"—and this may have been true—however it looks like they now have beta.regulations.gov which is more user-friendly and easy to search.

The FAQ page and video about the beta says it will replace regulations.gov around October 2020, but since beta.regulations.gov and regulations.gov still exist, it looks like that timeline is not accurate. I'd love to get more information about when the change over is happening and have a contact who can answer some of my colleague's concerns.

Here's the info on the event:

Making the transition from "dabbling in code" to understanding a programming language can be daunting. So let's get started!

**About this Event**

If you're choosing a first programming language to learn, PHP is a great place to start. As of April 2020, it is reported that PHP is in use by 78% of ALL websites (Drupal included)! Not a bad choice for a first language!

Join Debug Academy as we tackle learning PHP through a combination of lectures, demos and code samples. Come uncover the world behind variables, loops, functions, and much more!

**Our Instructor:**

Ashraf Abed is a certified Drupal 7 & 8 Grand Master, and a former Technical Architect at Acquia. He is involved in numerous enterprise development projects and has been fortunate enough to experience working as the lead developer on websites like Whitehouse.Gov and other prominent Drupal websites. Teaching is his passion.

**Training Provider** Debug Academy

Boost your career with our tailored personalized classes. This approach to teaching allows us to cater to individual student strengths and interests where students are part of a real development team, working on real projects.

Students leave with a working portfolio and applied experience on a software project led by a senior developer. Graduate with a career, not loans. Debug Academy-- A Better Way To Learn
Hey there, folks.

I took a version of this class during the recent Drupal GovCon – and it was pretty good! (Side note: If you know me at all, you know that I don’t drop courtesy compliments.)

Don’t know PHP? Want to start? You could do worse (much worse) than taking this free class.

Stay safe out there.
Larry

I had hoped to pitch this webinar during our call today but the agenda was just too full!

This presentation features Ammie and Dan, and while I don’t actually expect there to be anything particularly new for anyone on this list, I think it could be particular valuable for your colleagues who are new to USWDS or 21st Century IDEA.

Happy Thanksgiving everyone!
Section 508 Best Practices: Creating accessible websites using the U.S. Web Design System (USWDS) and the 21st Century Integrated Digital Experience Act (IDEA)

November 24, 2020, 1:00-2:30 (ET)  Add to Calendar

Presenters:

• Ammie Farraj Feijoo, 21st Century IDEA Implementation Lead, Technology Transformation Services (TTS), GSA
• Dan Williams, U.S. Web Design System, Technology Transformation Services (TTS), GSA

Registration

Note: Registration closes 24 hours before the start of the session. Instructions for accessing the webinar on the day of the session will be sent via email to registered individuals in advance of the session. Communication Access Realtime Translation (CART) and Video Sign Language Interpreters are available for each session and will be broadcast via the webinar platform. A telephone option (not toll-free) for receiving audio is also available.

Content-Type: multipart/related

Parts/Attachments: text/plain (5 kB) , text/html (10 kB) , image001.png (106 kB)

BTW, I think I just successfully crawled epa.gov in about 15 minutes with wget and this command line:

```
C:\Users\gillick2\Desktop>wget --mirror -t 3 w 11 --html-extension
```

Some of the complexity includes turning Drupal/PHP pages into .html pages and fixing all the links. Fun – and no work for me, if I’ve got it right. There’s also the random-wait between “gets” (helpful here at USDA to fool the servers into thinking the site’s not being crawled – sometimes our stuff fights back). I used a much longer random-wait for a farmers.gov crawl and it took two days.

Web managers,

Thank you for another engaging community huddle on Tuesday! I’m really enjoying these informal conversations, and I hope you are, too.

Christen Geiler, Rachel Flagg, and Tori Garten joined us and shared what they're doing to report their organizations’ progress in implementing 21st Century IDEA.

We discussed how to understand our digital footprint and reviewed the reporting requirements. We also discussed how to leverage this compliance-focused work to make cultural changes and, ultimately, improve our websites and digital services.

- In 2019, according to analytics.usa.gov, there were over 14 billion sessions and 38 billion page views on federal websites. Now, more than ever, we must deliver the digital experience the public expects and deserves.
- Section 3(d) of 21st Century IDEA requires federal executive branch agencies to report to OMB and the public for five years (2019 to 2023) their progress in implementing the Act. This year’s report is due on December 20.
- GSA worked with the Federal Web Council to develop the attached OPTIONAL reporting template.
  - Your agency is free to develop its own report format. You may also include your update as part of a pre-existing reporting mechanism, such as your agency’s congressional justification, instead of submitting a separate report.
  - Agency CIOs are tasked in the law with submitting their agency’s progress reports, so you will need to coordinate with your agency CIO, and your Federal Web Council rep, to develop and submit your report.
  - Agencies must also publish this report online. For consistency, consider publishing your report on your agency.gov/digitalstrategy page, as well.

In the words of Representative Ro Khanna, 21st Century IDEA sponsor, "Government exists to serve citizens."

Ammie

DESCRIPTION: This is a template for federal executive branch agencies to prepare their 2020 report to OMB on their progress to implement 21st Century IDEA. Use of this template is OPTIONAL.

INSTRUCTIONS: Fill out the template below, replacing logos, agency names, etc., as indicated in the comments. Delete this instructions page before submitting your report.

- **Report Content**: Focus on the major accomplishments your agency made in 2020 to modernize your websites and digital services, including:
  - Efforts (including costs) related to digitization of services, particularly around High Impact Service Provider (HISPs) and Customer Experience Action Plans;
  - Improvements to internal management systems, policies, governance models;
  - Consolidation and streamlining of content and websites; and
  - Improved compliance with laws and policies for federal websites and digital services.
  - Finally, as noted in Section 4(d) of 21st Century IDEA, you must report on your progress to digitize “any paper based form that is related to serving the public”.

- **Length**: Main body of the report should not exceed two pages.

- **Publication Guidance**: Publish a copy of this report on your agency’s flagship public-facing website.
  - Link to your report from your agency.gov/digital-strategy page.
  - If you post the report as a PDF, please include an HTML version as well.

- **OMB Submission Guidance**: Work with your agency CIO to submit your report to OMB at ofcio@omb.eop.gov.
  - You may submit either a document/PDF, or link to the report on your website

- **Due Date**: December 20, 2020.

- **Reminders**
  - Update the document name to replace [AGENCY] with your agency acronym (e.g., GSA, HUD)
    - Should read similar to: “2020 GSA Report to OMB…”
  - **Delete** this instruction page before submitting.
U.S. General Services Administration

December 2020 Report

Prepared for the Office of Management and Budget and the public per the requirements of section 3(d) of Public Law 115-336.
Background
Section 3(d) of the 21st Century Integrated Digital Experience Act (21st Century IDEA) requires the head of each Federal executive branch agency to report annually (through 2023) to the Director of the Office of Management and Budget (OMB) and the public on the agency’s progress to implement the requirements of the Act, and modernize their websites and digital services. The information below details the efforts of the U.S. General Services Administration (GSA) to modernize the agency’s websites and digital services in 2020.

GSA Efforts to Date
We are leveraging 21st Century IDEA to streamline our digital footprint and deliver an easy online experience to customers and partners. Building on the work we began in 2019, our focus in 2020 was to...

Major accomplishments for 2020 include...

Accomplishment #1
[Brief (1-2 paragraph) description of accomplishment and impact. Focus on work (including costs) related to meeting the goals of the CX CAP Goal]

Accomplishment #2
[Brief (1-2 paragraph) description of accomplishment and impact.]

Accomplishment #3
[Brief (1-2 paragraph) description of accomplishment and impact.]

Digitization of Forms
As required in Section 4(d), we have digitized all paper-based forms related to serving the public. Our forms are published in our GSA Forms Library.

Hello Everyone,

There was a special request to have the optional Ugly Sweater Contest submissions extended until Wednesday. Please see the following update below and we look forward to seeing your submissions.

**OPTIONAL UGLY SWEATER CONTEST DURING THE EVENT**

Keeping with our December meeting tradition, the first annual “Beauty Is In The Eye Of The Beholder” Ugly Sweater Contest will take place. Take a picture of yourself in your “best” holiday sweater and submit it to section.508@gsa.gov by **1:00 p.m. on Wednesday, 11/25**. Please include your name and agency with your picture, and you must be present at the meeting wearing your sweater to be eligible to win. Voting for best ugly sweater will take place during the meeting.**

*This meeting will be supported by Zoom for Government (Fedramp certified). Please feel free to attend via your personal device.

**Note: by submitting your picture you agree to the following:

- Your picture being shared during the meeting for voting
- Wearing your sweater during the meeting for others to see
- Your picture “as the winner” being shared on section508.gov

Subject: COVID-19 Webinar Series: Face Masks and People with Disabilities - December 9 at 2PM EST

A Closer Look: Face Masks and People with Disabilities

Wednesday, December 9, 2020
2:00 PM to 3:00 PM EST

Registration Link

Early registration is required. Registration closes 1 hour before the live webinar begins.
In order to reduce the spread of COVID-19, the Centers for Disease Control and Prevention (CDC), and many state and local governments recommend wearing a face mask or face covering in public places and around people who do not live in the same household, in addition to other prevention measures such as handwashing and social distancing. Some disabilities make it difficult or impossible to wear a face mask and some individuals with mobility/movement disorders have difficulty putting on, adjusting, and/or removing a face mask without assistance. This webinar outlines CDC’s face mask guidelines and explores solutions to challenges some people with disabilities experience in attempting to follow the guidance. Participants will receive tips, resources, and guidance for wearing face masks to protect themselves from COVID-19.

**Target Audience**
This is an introductory level webinar for anyone interested in learning more about the CDC’s face mask guidelines and solutions to challenges people with disabilities may experience related to wearing face masks.

Click [here to register](#) for this free webinar and please share with your colleagues, clients and community. Webinars are presented through Zoom. Captions and American Sign Language will be available. All webinars are recorded and the archive, transcript, accessible presentation, as well as additional handouts will be made available within one week of the live webinar.

**Learning Objectives:**
Upon completion of this webinar, participants will be able to:
1. Describe 3 challenges for some people with disabilities related to wearing face masks.
2. List 3 tangible solutions to address challenges for some people with disabilities related to wearing face masks.
3. Identify 3 face mask resources to support health for people with disabilities.

**Continuing Education Credits:**
Participants in this webinar will qualify for CEUs through the AAC Institute and CRCs through the Commission on Rehabilitation Counselor Certification (CRCC).

**Additional webinars:**
Please save the dates for additional webinars in the series:

- [A Closer Look: Mental Health and Resilience within the Disability Community During COVID-19](#) - Wednesday, December 16, at 2:00 PM
- [Making Social Media Accessible for People with Disabilities](#) - Wednesday, January 20, 2021 at 2:00 PM
- [A Closer Look: Guidance for Business and Employers Considering the Needs of People with Disabilities during COVID-19](#) - Wednesday, February 10, 2021 at 2:00 PM
Contact:
For questions about this webinar or would like more information about the COVID-19 Accessible Materials for People with Disabilities Project, please contact training@gatfl.gatech.edu.

This webinar series is made possible due to funding from the CDC Foundation along with technical assistance from the Centers for Disease Control and Prevention.

Web managers,

The Federal Web Council, an interagency group of digital and web directors, collaborates across agencies to improve federal digital services. We’ve heard from several of you that you’d like to hear more about what the Federal Web Council is working on, so we’re sending out occasional Council updates.

The Council last met on Thursday, November 19, 2020. Below are highlights from the meeting.

**Training and Other FY 2021 Priorities**
The Web Council discussed its priorities for FY 2021, and training for the digital workforce is at the top of the list. Please send me your ideas, potential speakers, and training artifacts for “think digital-first” training. Also, send me any success stories or challenges related to the training and onboarding of new digital team members. I’ll share this information with the Web Council.

**End of Term Web Archive**
Since 2008, the End of Term Web Archive has captured and saved federal websites at the end of presidential administrations. The archive uses several seed lists. You can also use their nomination tool to submit any specific content that you think should be included in the archive.

**21st Century IDEA Reporting**
By December 20, all federal executive branch agencies must submit their second annual progress report on implementing 21st Century IDEA. See, for example, GSA’s 2019 report on its progress in implementing 21st Century IDEA at gsa.gov/digitalstrategy. GSA drafted and shared a template for our 2020 report, and I’m sharing it here again. Though it’s not required to use the template, you’re welcome to use it to develop your report as well. Coordinate your reporting efforts with your agency CIO and Web Council rep.

**Community Huddle**
Save the date! The next community huddle is tentatively scheduled for December 16 at 1 p.m. ET. Colleagues from GSA’s Government-wide IT Accessibility Program will be joining us to talk about creating accessible videos. Pencil it in and be on the lookout for a calendar invite in the coming weeks.

Registration is now open for EPA's Watershed Academy webcast on How's My Waterway which will take place on Tuesday, December 15, 2020. Due to the high interest of the last webcast we held on this topic, we are excited to host an additional webcast for those that were unable to attend. This webcast is a live demonstration of the How's My Waterway tool and we ask that attendees please do not follow along in the tool while viewing the webcast, and instead visit the site at a later time.

Also, due to the high number of expected registrants for this webinar, the webcast may reach capacity. We suggest joining a few minutes early to get into the webinar. If you attempt to join the webcast and the attendance capacity has already been met, you will be added to a waiting list of attendees who wish to join. If you are ultimately unable to view the webcast, a recording will be available following the webcast. Thank you for your understanding, and for your interest in this webcast.

For more information on this webcast and to register visit: https://www.epa.gov/watershedacademy/hows-my-waterway-december-webcast.

For more information on the Watershed Academy, visit: https://www.epa.gov/watershedacademy.

Join Us For a Special Webcast on How’s My Waterway
December 15th 2020

An updated version of How’s My Waterway (HMW) was released publicly in June 2020. HMW provides a comprehensive overview of water quality data and information in the United States on three different scales: community, state and national. HMW pulls in data from eight databases across EPA through web services with the goal of answering questions about aquatic life, eating fish, swimming, drinking water, restoration and protection. This demo is meant to help users:

- **Explore** information about their drinking water, local stream conditions, and whether their waterways are suitable for swimming or eating fish and if they support aquatic life.
- **Discover** if their waterways are being monitored and the location of local monitoring stations.
- **Learn** what issues might be affecting their waterways.

Please join us for this webcast to view a live demo of the recently enhanced version of How’s My Waterway. This webcast will provide an overview and demonstration of this user-friendly, accessible, data-rich and map-centric HMW application. Participants will feel empowered to communicate water quality information to their community in order to restore and protect their waters.

For more information on How’s My Waterway visit:  
[https://www.epa.gov/waterdata/hows-my-waterway](https://www.epa.gov/waterdata/hows-my-waterway)

To access the tool directly visit: [https://mywaterway.epa.gov/](https://mywaterway.epa.gov/)

**Speakers:**

U.S. Environmental Protection Agency, Office of Wetlands, Oceans & Watersheds

- **Dwane Young**, Chief, Water Data Integration Branch
- **Kiki Schneider**, IT Specialist, Water Data Integration Branch

---

**Hosted by the Watershed Academy**

For more Watershed Academy webcasts visit: [https://www.epa.gov/watershedacademy](https://www.epa.gov/watershedacademy)

---

*EPA’s Watershed Academy provides self-paced training modules and webcast seminars on current information from national experts across a broad range of watershed topics.* [www.epa.gov/watershedacademy](http://www.epa.gov/watershedacademy)

Web Content Managers,

Please see the following message from Laurence Brewer, Chief Records Officer for the U.S. Government, National Archives and Records Administration (NARA), on the importance of proper records management, including web records, during this Presidential transition.

**************************************************

As we are now in the middle of a Presidential transition, I would like to remind this group, and all federal employees, of the importance of proper records management, compliant with the Federal Records Act and NARA regulations, to ensure that the decisions and activities of our Government are captured as federal records. The recordkeeping actions we all take now, including senior officials and political appointees, ensure accountability and promote transparency for each of our agencies.

To assist agencies, the Archivist of the United States, David S. Ferriero, has issued a memorandum to all agency heads emphasizing records management during this transition. In addition, through my office’s blog, Records Express, we have posted guidance for agencies on several key areas related to transition.

Specific to managing agency web records and websites, I want to highlight the importance of managing all Federal records on agency websites in accordance with NARA regulations and guidance. This covers scheduling and disposition of web content, including data sets.

Managing Federal web records is especially important when agencies make significant changes to their web content, such as when they update pages relating to agency leadership or when their website undergoes a significant re-design. Agencies are required to manage these records, including scheduling and transferring them to NARA if they are appraised by NARA as permanent records. These requirements and responsibilities are discussed in detail in NARA’s web guidance.

Some Federal agency websites are harvested and made available through non-Federal “archiving” organizations. Archiving efforts by these organizations (unless done under contract with an agency for records management purposes) do not relieve an agency of its obligations to manage its records in accordance with the Federal Records Act.

For general assistance, please contact my office at rmpolicy@nara.gov. If you have specific questions related to your own agency’s records management practices, please reach out to your
agency's designated Records Officer or Senior Agency Official for Records Management.

**************************************************

Perhaps GSA might be able to leverage their Instagram contacts and see if they’d be willing to allow verified public-sector accounts a lower (or zero) threshold for the “Swipe Up” feature?

Subject: Re: [CONTENT-MANAGERS-L] Solving the Instagram 1-link policy

If you use Instagram stories, you can add a link to the story. (The “swipe up for more” that you see on a lot of stories from corporations.) I believe that unless you do some funky hacks, you need at least 10,000 Instagram followers to have this feature.

Best,
Shannon

I agree with you in general. We're definitely not looking for solutions that make people install something or change how they use Instagram, nor do I want to change the images we post.

That said, when companies like the NY Times and Anthropologie, and celebrities like Selena Gomez, provide links to more content, it tells me at least some Instagram users do want more info at least some of the time. I mean, the fact that commercial services have sprung up suggests it's a pretty common desire among brand followers (personal, commercial, and government). Why miss that opportunity?

So if there's a relatively straightforward way to do that, I'd like to pursue it.

Rather than trying to make Instagram what it isn’t to fit our needs, shouldn’t we be more focused on tailoring our content to fit the platform and its consumers? Instagram is what it is because that’s what its consumers want. They don’t want to be directed to other content. I understand that as content managers or public affairs specialists we want to direct traffic to our content, but it’s not about that with Instagram. Different medium … different audience … different engagement.

Generally, that is true, but there are apps and browser plugins now that add functionality to either the operating system or the browser to read QR code images in HTML pages. One would just tap, or tap and hold on the QR code image and a menu would appear to read the code. People would have to have the app installed to be able to do it, but it does work. Maybe the link in the bio page can list all the apps that do that for each operating system or browser plugin and suggest they install it. However, as a federal agency maybe that would be seen as promoting something, hard to tell. It’s an idea.

Question about the QR idea – assuming most people are using IG on a phone, wouldn’t you need a second phone for scanning the QR code in order for this to work? One phone to display the image, a second one to use the camera function to take a picture and go to the QR code?

A quick search of IG on my phone to find a QR coded image to test (I used #QRcodetattoo) makes it seem like that is the case.

P.S. For people who do physical take-aways for events – QR code temporary tattoos raise some interesting possibilities. (See article on marketers doing it here and here, and WaPo’s “this trend is already over” take from 2012)

~Laura

You could always add a QR code to your post, embed it in an image, and when people scan it, it will take them to the appropriate web page.

You could leverage the “Share To…” function of the IG post, either using an app or write a service that takes text (like a Twilio SMS receiver) or email. A Lambda task, etc. – takes the link that IG populates and parses off the appropriate ID, matches it up in a db/lookup, and fires back the link you want them to visit. “As a service.” So from the user perspective something along the lines of, “Share this post via text message to 5551212 to receive a direct link! We don’t retain your data, our ‘no spam guarantee.’” and/or instructions in the bio for same.

--Ben

I’m not familiar with how they are doing that, but have you explored using a dom modification with jquery or the like to make the text into a link?

Hi everyone.

tl;dr - We're investigating how to solve Instagram's 1-link limit. If you've got a workaround, please let us know. Our folks would like to interview you to learn more.

Here's the longer version for those who are now scratching their heads. ;)

Unlike Twitter, Facebook, etc., Instagram doesn't let you provide live links from posts. Sure, you can paste a URL in the description, but it won't be linked, leaving users to have to copy/paste it into a browser. Not ideal.

Instagram does give you a link from the account bio (aka profile). One link. Not two, not three. One. Which would be fine if they allowed you to link from each post.

The easiest solution is to link to your website's home page, but that leaves Instagram followers to stumble around the site looking for content related to that post that just got their attention enough to
Stumble around the site looking for content related to that post that just got their attention enough to leave them hungry for more. Also not an ideal experience.

Two general options seem to have emerged. In both cases, you call attention to your solution by ending each post with something like "see bio link for more."

1) Link to a page of links, which probably isn't updated too often. This can work if your Instagram posts generally fall into certain categories. For example, if you post a lot about, oh, let's see ... astronaut pets (Probably not a real NASA thing. Probably. NASA folks, care to comment?) ... you might have a link on that page to "Astronauts and their pets." Still not ideal, but at least anyone interested in more info about a photo of an astronaut and their cat can get to the right general place.

And hey, maintaining a static list of links is easy.

2) Link to a constantly-updated set of links. Those can be text, but the platinum-level solution is to use the same photo as what's on each Instagram post to link to more info about that post. And if you do it right, you could have something you log into that both posts to Instagram and updates the links page so you don't have to log into two systems.

Third-party services have emerged to provide both solutions, but hey, we're the gummint! We can build our own! More to the point, by building our own, we can meet all federal requirements, including not handing our followers' info over to sites that don't share our strong privacy protections.

What, you want examples? I got examples!

Solution 1: [http://linktr.ee/](http://linktr.ee/) lets you keep a page of links. The first example they provide on their home page is Selena Gomez. No real connection between her Instagram posts and her Linktree page.

But really, it's easy to imagine maintaining a list of links.

Solution 2: Anthropologie: look at how their Instagram feed is mirrored by their bio link page. Can you say "seamless experience"? Or at least "as seamless a workaround as could exist"? The New York Times is another example: [Instagram | bio link page](http://instagram.com)

Heyyyy - not bad for a guy who'd never heard of this issue before Tuesday.

So - if you've got a solution, we want to talk to you!

Hi All

State worker lurking in the background here—thank you for all of the very helpful information! And Drupalgov.con, which has been a lifesaver. I don’t know if this will help, but when I attended GSMCON in 2019 I found it really helpful. There are all kinds of workers from Facebook/Instagram, Twitter, Shapchat etc and they would verify your government accounts and get everything squared away for you right at the exhibitor booth. One of the presentations included the importance of government agencies having a business account for Instagram, rather than a regular account, and linking it to their Facebook account. This is from one of the slides at the presentation. I don’t know if any of these people still work there, but if you reach out to one of these contacts and explain what you are trying to do I think they would be enormously helpful:

Hi everyone.

tl;dr - We're investigating how to solve Instagram's 1-link limit. If you've got a workaround, please let
us know. Our folks would like to interview you to learn more.

Here's the longer version for those who are now scratching their heads. ;)

Unlike Twitter, Facebook, etc., Instagram doesn't let you provide live links from posts. Sure, you can
paste a URL in the description, but it won't be linked, leaving users to have to copy/paste
it into a
browser. Not ideal.

Instagram does give you a link from the account bio (aka profile). One link. Not two, not three. One.
Which would be fine if they allowed you to link from each post.

The easiest solution is to link to your website's home page, but that leaves Instagram followers to
stumble around the site looking for content related to that post that just got their attention enough to
leave them hungry for more. Also not an ideal experience.

Two general options seem to have emerged. In both cases, you call attention to your solution by
ending each post with something like "see bio link for more."

1) Link to a page of links, which probably isn't updated too often. This can work if your Instagram
posts generally fall into certain categories. For example, if you post a lot about, oh, let's see ...
astronaut pets (Probably not a real NASA thing. Probably. NASA folks, care to comment?) ... you
might have a link on that page to "Astronauts and their pets." Still not ideal, but at least anyone
interested in more info about a photo of an astronaut and their cat can get to the right general place.
And hey, maintaining a static list of links is easy.

2) Link to a constantly-updated set of links. Those can be text, but the platinum-level solution is to use the same photo as what's on each Instagram post to link to more info about that post. And if you do it right, you could have something you log into that both posts to Instagram and updates the links page so you don't have to log into two systems.

Third-party services have emerged to provide both solutions, but hey, we're the gummint! We can build our own! More to the point, by building our own, we can meet all federal requirements, including not handing our followers' info over to sites that don't share our strong privacy protections.

What, you want examples? I got examples!

Solution 1: [http://linktr.ee/](http://linktr.ee/) lets you keep a page of links. The first example they provide on their home page is Selena Gomez. No real connection between her [Instagram posts](https://www.instagram.com) and her [Linktree page](http://linktr.ee/).

But really, it's easy to imagine maintaining a list of links.

Solution 2: Anthropologie: look at how their [Instagram feed](https://www.instagram.com) is mirrored by their [bio link page](https://www.anthropologie.com). Can you say "seamless experience"? Or at least "as seamless a workaround as could exist"? The New York Time is another example: [Instagram](https://www.instagram.com) / [bio link page](https://www.nytimes.com)

Hi everyone.

I might have missed someone else sharing this, but ...

The Amazon Web Services (AWS) re:Invent conference is running right now, Nov. 30-Dec. 18. It's a free, online-only conference all about Amazon Web Services, which we use to host state.gov and each mission website.

If you're interested in learning more about AWS, or what it can do, I think it's a good professional development opportunity.

You have been invited to the following event.

**Web Managers Community Huddle**

**When**: Wed Dec 16, 2020 1pm – 2pm Eastern Time - New York  
**Calendar**: content-managers-l@listserv.gsa.gov  
**Who**: (Guest list has been hidden at organizer's request)

Join Tori Garten and me for the latest Web Managers Community Huddle. This will be an informational meeting for open and organic information exchange.

The topic for this huddle will be **how to create accessible videos** with guest hosts Michael Horton, Andrew Nielson, and Alex Wilson from GSA’s [Government-wide IT Accessibility Program](#).

We'll talk about how to ensure video content includes synchronized captions and audio descriptions for people with visual disabilities, among other topics.

You will need to accept this invite to join the huddle. Please also let me know if you need any accommodations to fully participate in this meeting.

Content managers,

Now more than ever, it’s essential to get the right content to the right people at the right time in the right way. After interviewing teams across the federal government, the U.S. Web Design System (USWDS) developed a set of components to improve how we present content on government websites, especially during emergency response efforts.

Join the USWDS team on Thursday, December 17, at 2:30 p.m. ET for the last monthly call of 2020. Team members will dig into our latest release, USWDS 2.10. They'll review new components designed with emergency response in mind and share information on how the components help to highlight critical information and actions. This call will be of particular interest to developers.

📣 Register at http://go.usa.gov/xAcUq to join us on Thursday.

Also, consider setting a recurring calendar invite to join the USWDS team every third Thursday of the month at 2:30 p.m. ET. There's lots more to come in 2021, and you don't want to miss a thing!

The message should have NO SUBJECT, and the only text in the message should read: set content-managers-l
A couple weeks back I shared a draft graphic that provided a simple workflow aimed at video creators who have limited experience understanding when they should be providing closed captions, audio descriptions, both, or if they're not needed. I received a lot of great positive feedback as well as suggested changes from a few groups. Thank you to everyone for responding and working with me to improve the graphic (e.g., adding some more contrast the colors, reorganizing the workflow, updated wording, making the "Start" more obvious, etc).

I've attached the updated graphic with descriptive text beneath of it (workflow as a bulleted list).

I know that others could easily expand this graphic for their own purposes, or for other audiences within their organization. Rather than trying to be the keeper of this info, I've attached the PowerPoint slide I used to create this current version so you can build from it. I've done what I can to make the PowerPoint accessible as well...though the reading order was quite difficult to say the least, but I hope it's close.

Thanks again.

**Bulleted List Workflow of Attached Graphic**
The diagram provides a workflow for anyone creating video to understand what items they'll need to make their video accessible based on the type of video they're creating, or have created. Below is a bulleted list of the workflow.

**Accessibility Requirements for Video Projects**

- **Start here:** Using narration, talking, or sounds in your video?
  - **Yes**
    - Using visual info to explain something important (e.g., on-screen text, charts, slides, b-roll, etc)?
      - **Yes**
        - You'll need closed-captions (for the narration), and audio descriptions (for the non-described visual or audio necessary for understanding of the content).
          - Hint: In some cases you, can avoid creating audio descriptions after the fact if you describe the visuals using narration or if the speaker explains the visual (in the original video recording).
      - **No**
        - You'll need closed-captions (for the narration)
  - **No**
    - Shooting b-roll only (* B-roll is specifically uncut footage intended for the media or reporters)
      - **Yes**
        - Closed captions and audio descriptions are not required.
      - **No**
        - Using silent, visual info (e.g., silent film, silent how-to video)?
          - **Yes**
            - You'll need audio descriptions (to explain the important actions happening on-screen).
          - **No**
            - This isn't a video. Try again.

The diagram provides a workflow for anyone creating video to understand what items they'll need to make their video accessible based on the type of video they're creating, or have created. Below is a bulleted list of the workflow.

**Accessibility Requirements for Video Projects**

- Start here: Using narration, talking, or sounds in your video?
  - Yes
    - Using visual info to explain something important (e.g., on-screen text, charts, slides, b-roll, etc)?
      - Yes
      - You’ll need closed-captions (for the narration), and audio descriptions (for the non-described visual or audio necessary for understanding of the content).
      - Hint: In some cases you, can avoid creating audio descriptions after the fact if you describe the visuals using narration or if the speaker explains the visual (in the original video recording).
      - No
      - You’ll need closed-captions (for the narration)
  - No
    - Shooting b-roll only *(B-roll is specifically uncut footage intended for the media or reporters)*
• Yes
  • Closed captions and audio descriptions are not required.

• No
  • Using silent, visual info (e.g., silent film, silent how-to video)?
    • Yes
      • You’ll need audio descriptions (to explain the important actions happening on-screen).
    • No
      • This isn’t a video. Try again.

To: CONTENT-MANAGERS-L@LISTSERV.GSA.GOV
Subject: [EXTERNAL] [CONTENT MANAGERS L] Updated Diagram for Accessibility Workflow for Videos
A couple weeks back I shared a draft graphic that provided a simple workflow aimed at video creators who have limited experience understanding when they should be providing closed captions, audio descriptions, both, or if they’re not needed. I received a lot of great positive feedback as well as suggested changes from a few groups. Thank you to everyone for responding and working with me to improve the graphic (e.g., adding some more contrast the colors, reorganizing the workflow, updated wording, making the "Start" more obvious, etc).

I've attached the updated graphic with descriptive text beneath of it (workflow as a bulleted list).

I know that others could easily expand this graphic for their own purposes, or for other audiences within their organization. Rather than trying to be the keeper of this info, I've attached the PowerPoint slide I used to create this current version so you can build from it. I've done what I can to make the PowerPoint accessible as well...though the reading order was quite difficult to say the least, but I hope it's close.

Thanks again.

Do you love writing plain language content in English and Spanish, crafting engaging digital experiences, and working with an incredible team? We’re looking for a new writer to join ATF’s Web Media Branch and support our critical law enforcement and regulatory mission!

**GS-13 Communications Specialist, open through 12/29:**
https://www.usajobs.gov/GetJob/ViewDetails/587167400
(open to current feds, veterans, career transition and individuals with disabilities)

You’ll join two other writers, two content editors/PMs and three developers who work together every day to improve ATF’s digital communications, primarily through our website at ATF.gov and public email lists.

A sampling of what you’ll be working on:

- **Migration to Drupal 9:** Analyze top tasks and identify content gaps, write new content in coordination with ATF experts, and rewrite/redesign outdated content to better meet user needs.

- **ATF en español:** Manage the content on our Spanish website at ATF.gov/es (700+ pages), check professional translations for quality and consistency, keep our bilingual glossary and style guide up to date, and lead our monthly Spanish Council with ATF employee volunteers who review translations for technical accuracy.

- **Recruitment campaign:** Help plan and implement a national campaign to support ATF’s recruitment of inclusive and diverse populations.

ATF is currently at maximum telework due to the pandemic; however, this position is based at the HQ building in Washington, DC and is eligible for telework or AWS.

Please pass this along to anyone who might be interested, and let me know if you have any questions!

Happy holidays,

Chief, Web Media Branch

Pronouns: she/her
Which CoP wants to ask him to present? It's not a plain language focus.

José Vejarano
Chief Content Strategist, IRS.gov

During the COVID-19 pandemic, the IRS relied on partnerships within the Service, across the U.S. government, and with the private sector—and on unprecedented metrics and user feedback—to help Americans through this crisis.

This talk will share what the agency faced as they had to get money quickly to people who needed it, and how they built the partnerships that helped them move quickly. We’ll look at what the crisis did to their site—with traffic volume so high they broke their real-time analytics. It will also cover how they analyzed and responded to ongoing metrics, user feedback, news, and social media.

In this talk, you’ll learn how to:

- Build partnerships within and beyond your organization.
- Adapt to your own limitations.
- Anticipate user needs in a complex situation.
- Capture and analyze user metrics and feedback—and cycle that feedback into real-time site updates.

Who will benefit most: This talk will be helpful to people who need to collaborate across a large organization. It will also be helpful to anybody who wants to learn how metrics, research (user surveys, social media), and analysis can inform content strategy and bring stakeholders together to collaborate—even in a crisis.

GitLab and Drupal, a Fork Made to Merge.

Webinar: Drupal Association: Forking and Merging with GitLab

The Drupal project turns 20 years old in 2021! As one of the oldest open source projects with a continuous and vibrant community, some of Drupal.org’s contribution tools actually predated the existence of GIT. For the last several years, the Drupal Association’s engineering team has worked to update and modernize these developer tools, migrating all of Drupal.org’s 35,000+ repositories to a GitLab instance, and creating an integration between Drupal.org issues and GitLab merge requests.

In this webinar, we’ll chat about:

- How to use these new contribution tools;
- The scope of the effort to make this migration happen; and,
- The future of contributing to the Drupal project.

If you’ve always thought about contributing back to Drupal, but haven’t made the leap, this talk will be a great opportunity to get started!
Our Instructors: Tim Lehnen and Neil Drumm

**Tim Lehnen** is the CTO of the Drupal Association, recently celebrating his 6th anniversary with the organization. Tim comes from a project management background, and is passionate about systems of collaboration, and about understanding the economy of open source.

**Neil Drumm** is the Senior Technologist of the Drupal Association engineering team, and has been involved in Drupal since the project's early days. Neil led the implementation of Drupal.org's GitLab migration, as well as writing the integration between the issue queues and GitLab forks and merge requests.

Training Provider The Drupal Association

**The Drupal Association** is an educational non-profit organization that fosters and supports the Drupal software project, the community and its growth. Supported by both individual members and organizations, the Association uses its resources, network and funds to constantly engage in new projects and initiatives to help educate people about Drupal and encourage support of the growth of the Drupal project. Drupal4Gov Annual Meeting Notice

Drupal4Gov, LLC, hosts the Drupal GovCon annual conference, our webinar series, and Drupal Global Training Days (once we can meet in person again in DC). Due to moving our annual event online, we were unable to also hold our Annual Meeting during Drupal GovCon, so this year, we will be hosting it on Friday, December 18 at 12pm EDT.

If you are interested in serving on the board, and participating in steering the organization, we encourage you to submit an application for At-Large member of the Drupal4Gov board. Election will be held at the end of the annual meeting. Application requires Google login, and closes Thursday, December 17 at 12pm EDT.

Afternoon all –

After the 2017 presidential transition, a few of us on the Federal Web Council (myself, Jeffrey Levy, and Larry Gillick in particular) wrote up a “lessons learned” retrospective on what went well, what didn’t, and where we should focus for the next transition (now).

So here are some thoughts for you to keep in mind over the next few months (for folks that are more “visual”, I’ve also attached a PowerPoint deck).

To be clear, this is not a directive, policy, etc. These are merely points of discussion and things for you to consider. Enjoy!

**Executive Summary**

Digital communication through websites, social media or other platforms is a vital way to serve audiences and increase government transparency. It helps people understand an agency’s mission and lets them learn about the work the agency is doing on their behalf and gives them the chance to talk directly to the federal government.

Maintaining digital content on each platform – web pages, tweets, Facebook posts or other content – is key to ensuring an open and effective government through administration changes.

**Purpose**

This white paper provides thoughts and ideas on how to manage federal websites through presidential transitions. It serves four broad goals for federal agencies:

- Inform the public about the incoming administration while continuing to provide historical information about the outgoing administration
- Continue to provide access to information about current and ongoing agency efforts
- Ensure that agencies follow good website content management practices
- Follow records management guidance

**Challenge**

Incoming administrations hit the ground running. They need to quickly inform the public about their goals and intended efforts (for example, for the first 100 days). Federal agencies need to be ready to publish new information quickly, without introducing long delays.

At the same time, agency websites are both libraries of information about long-term efforts and historical records of previous administrations’ priorities. Open government means that agencies should continue to provide those records online.

**Goal 1: Inform the Public about the Incoming Administration While Continuing to Provide Historical Information about the Outgoing Administration**
Recommended Actions

- Identify website content that reflects the outgoing administration’s messages and people. Examples include:
  - Priorities and goals
  - Accomplishments reports
  - Lists of political appointees (especially agency leadership)
  - Biographies of political appointees
  - News Items - press releases, blog posts, testimony, etc.
- Identify the relative priority for each of these items (do they need to be changed immediately, within the first week/month, or should they be part of a longer-term pivot to the new administration’s priorities)
- Identify any processes necessary to change that content
- Identify staff and managers relevant to changing the website:
  - Responsible: who changes the website content
  - Accountable: who decides/approves changes to content
  - Consulted: who needs to be part of the discussion of any changes
  - Informed: who needs to know the changes that are being made
- Prepare website homepages and other key entry points to either redirect links to the archive or remove them in favor of the incoming administration’s materials
- Identify any technical actions necessary to reflect the change in administration (for example, do you need to change design/templates?)
- Brief the incoming administration about website change processes
- Using the information developed above, establish a plan for:
  - Inauguration Day
  - Transition Team Arrival
  - Principal (Senate Approved) Appointee Arrival
  - Inauguration Day +5 (the first week)
  - Inauguration Day +30 (the first month)

Above all else:

**WAIT UNTIL AFTER NOON ET ON INAUGURATION DAY TO MAKE CHANGES.**
There is only one president at a time.

**Goal 2: Continue to Provide Access to Information About Current and Ongoing Agency Efforts**

**Recommended Actions**

- Working with the transition team, identify programs that are likely to be affected early in the new president’s term.
- Create plans to modify information about those programs per the new administration’s priorities.
- Identify the timeframe for each change.
- As above, identify who will be responsible, accountable, consulted, and informed. Career staff and managers might not change, but the new administration might adjust approval processes.

**Goal 3: Ensure that Agencies Follow Good Web Content Management Practices**

**Recommended Actions**

- Prepare for questions about how your agency serves the public through its website, social media, email outreach, etc.
- Brief agency communications leadership on the agency’s open data, open government, website management, accessibility, and other relevant policies and processes. Include federal-wide requirements such as OMB, NARA, and other directives. Continue to comply with all federal requirements.
Continue to focus on helping website visitors accomplish top tasks.
Continue to focus on helping website visitors accomplish top tasks.

Goal 4: Follow Records Management Guidance

On November 30, 2020, the Archivist of the United States issued a memorandum to all agency heads emphasizing records management during a presidential transition.

Recommended Actions

- Follow the defined schedule of records for the agency website.
  - NARA works with agencies to identify and schedule web records in order to preserve those records that are historically valuable and worthy of permanent retention for future generations of researchers.
- Remember that websites are considered federal records (especially those that contain databases or datasets). Consult with your agency’s records management office if you have any questions and, when in doubt, err on the side of retention vs. deletion.
- Transfer records that are scheduled as permanent records to NARA as required by the agency’s schedule of records. The requirements and responsibilities are discussed in detail in NARA’s web guidance.

Happy Monday,

Thank you for another engaging community huddle last week, and a big thank you to Tori Garten, Web Content Managers community co-lead, for facilitating this session.

Mike Horton and Andrew Neilson, from GSA’s Government-wide IT Accessibility team, joined us to answer questions and share some tips. They published a new resource, Create Accessible Synchronized Media Content, on Section508.gov. It is an excellent recap of the information we covered in the huddle and more. Be sure to check it out!

Also, the IT Accessibility Community of Practice helps federal agencies buy and build accessible technology. Join the IT Accessibility community if you’re not already a member. It is a great way to connect with others on this topic.

For me, a key takeaway was that accessible videos benefit everyone, and we need to account for this work early in the planning process, so it is included in the project’s allocated time, cost, and scope from the get-go.

Several community members shared resources in the chat:
- The Electronic Curb Cut (video) - Minnesota Department of Human Services
- Audio Description Project - American Council of the Blind
- Making Audio and Video Media Accessible - Web Accessibility Initiative
- Automatic Captions are Not Sufficient - Web Accessibility Initiative
- #MakeYourSplash on Wild and Scenic Rivers (example video with options for transcript, captioning & audio description) - Department of Interior
- IAAP Certification - International Association of Accessibility Professionals
- Trusted Tester Training and Certification - Department of Homeland Security
- Accessibility Requirements for Video Projects (3 attachments) - Scott Horvath, U.S. Geological Survey, shared a workflow diagram with the community last week. I attached it to this recap so that you can find it in one spot.

I look forward to our next huddle in 2021. Please send me any ideas for topics.

Accessibility Requirements for Video Projects

The diagram provides a workflow for anyone creating video to understand what items they'll need to make their video accessible based on the type of video they're creating, or have created. Below is a bulleted list of the workflow.

- Start here: Using narration, talking, or sounds in your video?
  - Yes
    - Using visual info to explain something important (e.g., on-screen text, charts, slides, b-roll, etc)?
      - Yes
        - You'll need closed-captions (for the narration), and audio descriptions (for the non-described visual or audio necessary for understanding of the content).
          - Hint: In some cases you, can avoid creating audio descriptions after the fact if you describe the visuals using narration or if the speaker explains the visual (in the original video recording).
      - No
        - You'll need closed-captions (for the narration)
  - No
    - Shooting b-roll only * (B-roll is specifically *uncut* footage intended for the media or reporters)
      - Yes
        - Closed captions and audio descriptions are not required.
      - No
        - Using silent, visual info (e.g., silent film, silent how-to video)?
          - Yes
            - You'll need audio descriptions (to explain the important actions happening on-screen).
          - No
            - This isn't a video. Try again.
Accessibility Requirements for Video Projects

Start here

Using narration, talking, or sounds in your video? Yes

Using visual info to explain something important (e.g., on-screen text, charts, slides, b-roll, etc)? Yes

Using silent, visual info (e.g., silent film, silent how-to video)? Yes

Closed captions and audio descriptions are not required.

Closed-captions Audio-described **

Shooting b-roll only? * No

Using visual info to explain something important (e.g., on-screen text, charts, slides, b-roll, etc)? No

This isn’t a video. Try again.

Using silent, visual info (e.g., silent film, silent how-to video)? No

Closed-captions Audio-described **

Using narration, talking, or sounds in your video? No

Using visual info to explain something important (e.g., on-screen text, charts, slides, b-roll, etc)? No

Closed-captions Audio-described **

Using silent, visual info (e.g., silent film, silent how-to video)? Yes

Closed captions and audio descriptions are not required.

* B-roll is specifically uncut footage intended for the media or reporters.

** In some cases, you can avoid creating audio descriptions after the fact if you describe the visuals using narration or if the speaker explains the visual.
Accessibility Requirements for Video Projects

Start here

Using narration, talking, or sounds in your video?

Yes → Using visual info to explain something important (e.g., on-screen text, charts, slides, b-roll, etc)?

Yes → Closed-captions

No → This isn't a video. Try again.

No → Shooting b-roll only? *

Yes → Using silent, visual info (e.g., silent film, silent how-to video)?

Yes → Audio-described **

No → Closed captions and audio descriptions are not required.

* B-roll is specifically uncut footage intended for the media or reporters.
** In some cases, you can avoid creating audio descriptions after the fact if you describe the visuals using narration or if the speaker explains the visual.
The Federal Web Council, an interagency group of digital and web directors, collaborates across agencies to improve federal digital services. We’ve heard from several of you that you’d like to hear more about what the Federal Web Council is working on, so we’re sending out occasional Council updates.

The Council last met on Thursday, December 17, 2020. Below are highlights from the meeting.

**Web records and presidential transition**
On December 1, the Archivist of the United States issued a memo to agency heads as a reminder of records management responsibilities during presidential transitions. NARA provides many records management resources, including three transition blog posts:

- General resources from NARA and GSA
- Entrance and exit checklists for senior officials
- Managing official email and social media accounts

Coordinate with your Web Council rep and agency records officer to confirm that your website and social media follow proper web records management guidance during the presidential transition.

**21st Century IDEA reporting**
The 21st Century IDEA reports for 2020 were due on December 20. Coordinate efforts with your agency CIO and Web Council rep.

**U.S. Web Design System updates**
Over the past few months, the U.S. Web Design System (USWDS) team has talked with nearly 60 individuals across 32 teams, focused on emergency response related to the pandemic. They shared the high-level findings from this research in November’s USWDS monthly call. Last week, they released USWDS 2.10 with eight emergency response components and three authentication page templates. The team shared more details on what’s new in USWDS 2.10 in December’s USWDS monthly call and will post the video soon.

Consider setting a recurring calendar invite to join the USWDS monthly call every third Thursday of the month at 2:30 p.m. ET.

Try Go.USA.gov. They are a URL shortener for government agencies.

---

Hello there,

I'm wrestling with URL shorteners for internal gov links, specifically those within the Microsoft Cloud.

VA SharePoint sites are migrating to SharePoint Online within the Microsoft Cloud and those links aren't accepted by the usa.gov shortener. For example a VA SharePoint URL like https://dvagov.sharepoint.com/sites/VHAPugResearch... isn't accepted because the URL isn't a valid .gov/.mil/etc URL. On the other hand dvagov.sharepoint.com *is* a legit government domain within the Microsoft cloud. It's a new wrinkle and I'm wondering what to recommend to colleagues.

If usa.gov is out and the internal VA.gov shortener is dead, are there other gov supported ones out there?

Thank you for your consideration.

Good Morning Everyone,

I am guessing that a fair amount of Agencies/Departments will start moving to blocking certain if not all of the URL shorteners. From what I know, the Department of Education presently blocks all of them, because people can’t check URLs within emails to ensure that they aren’t phishing attempts if URL shorteners are used.

Try Go.USA.gov. They are a URL shortener for government agencies.

I know others have been doing Townhalls during the pandemic – what's worked well for you in this totally remote format?

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!

- How best to replicate the energy of a townhall in the virtual format so it doesn't drag?
- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
  - [No need to give *me* the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn’t work, please share.]
- If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to a emailbox in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
- We have the usual bandwidth concerns, but are there other tech issues I’m not thinking of?

Thank you all in advance for your advice,

~Laura

Laura,

We’ve done such events. We can talk details offline, but the comms summary is:

- ZoomGov (the Fedramp cloud version) works well and can accommodate 10,000 webinar participants.
- Use the Webinar tool, NOT the meeting.
- Assign at least 2 co-hosts (to manage questions, highlight speakers, and manage/admit/support attendees.
- PRACTICE. PRACTICE. PRACTICE. Have all hosts and presenters for a full run-through so they are familiar with the controls.
- Accessibility: ensure FedRCC captions are setup and communicated. Hire an ASL interpreter and be sure they are at the practice session. And, send a copy of the (accessible!) presentation to all attendees.
- Consider questions or requests to speak into the meeting via email as some people have trouble with the Q&A interface.
- During the event: HIGHLIGHT the appropriate presenter or attendee if speaking. Encourage use of the chat function to engage in open conversations, and have a Co-host monitor and ping presenters about some key takeaways.
- Always use the cloud recording function, it will do a decent job of auto-captioning the video, and it allows in-line editing for easy correction.
- Don’t forget to do a post-event survey!

Good Morning Laura,

We will need a little more information to assist with your questions. What platforms are you presently using, ie Teams, Teams Live Events, Zoom, Gotomeeting, etc?

At the Department of Education we leverage Teams and Teams Live Events, which we have leveraged for large events..

Teams Live Events are like a TV broadcast where-in it is more of a one way presentation and doesn’t allow attendees to unmute and ask questions. There is a mechanism which allows the attendees to submit questions and for someone to moderate and post the questions and the corresponding answers for everyone to see. It also allows someone to queue content for the person who is presenting, so things can happen behind the scenes.

Teams Meetings will give you two-way communication, allow you to mute all of the attendees as necessary, allows attendees to raise their hands when asking questions and gives you “Together” mode which allows multiple people’s video to show on screen at once in a virtual meeting room.

Have a great week and please remember that things will get better with time,

Jim Richards
Information Technology Principal Office Coordinator, (IT POC) Information Systems Security Officer, (ISSO) Webmaster, SharePoint Administrator and…
OGC & OLCA
U.S. Department of Education
**Work:** (202) 453-6845  (Please call through Teams after checking my availability)
**Email:** jim.richards@ed.gov

400 Maryland Avenue SW, Room 6E353
Washington, DC 20202

**Hours of Operation:**
Monday – Friday | 7:15 – 3:45

Please be aware that I can’t turn on call forwarding for my phone, so the best way to call me is through Teams.

“Life is like a roller coaster, you have to hold on through the lows to get back to the highs.”
I know others have been doing Townhalls during the pandemic – **what's worked well for you in this totally remote format?**

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!
- How best to replicate the energy of a townhall in the virtual format so it doesn’t drag?
- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
  - [No need to give *me* the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn’t work, please share.]
- If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to a mailbox in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
- We have the usual bandwidth concerns, but are there other tech issues I’m not thinking of?

Thank you all in advance for your advice,

~Laura

When I was at DOJ last year (I am now at OPM) I was doing multicamera Townhalls / Fireside-Chats utilizing
our broadcast switcher and then taking a feed out to a device like this:
https://www.bhphotovideo.com/c/product/1557397-REG/datavideo_cap_1_sdi_to_usb_3_0.html that
converts my SDI into a USB feed into a laptop. It embeds audio and video and tricks the laptop into thinking
it’s a webcam and mic. It can be used on ANY platform, as it simply acts like a webcam. I personally used
Teams and WebEx the most. I used it a couple times with Zoom. The sound and video quality through the
computer was/is fantastic.

I liked using WebEx as you can invite someone to Close Caption live during the event. However this only
works in “presentation” mode. It also prevents people from unmuting their mics. But can ask questions with a
moderator in a chat room. I believe Adobe Connect can do the same thing.

The SDI to USB device cost is around $300 dollars and worth every penny.

Good Luck!

Best,
-Shawn

We do a ton of these, and I agree with Mark.

I’d add a couple of these, and I agree with Mark.

- As the organizer you can ask everyone ESPECIALLY your top brass speakers for their personal cell numbers and give them your cell as well. PRINT THIS OUT on paper if possible and keep it on your desk during the meeting so you don’t have to open a screen to access the numbers quickly! Tell the execs to keep their phone close but on silent/vibrate in case you need to alert them via text that something is wrong in mid meeting. (e.g. their sound stops suddenly) Remind everyone to have their cell phones fully charged in case they have to dial in when audio gives out during their presentations!

- Better to have each person in their own setting doing their presentation, not together IRL – even if they follow protocols and wear masks it is hard to see them all at a distance and they just look tiny and faceless. Also, each person should get their own label on screen – if you have them together as a group you have to name them as a group and that’s not as good for those who are watching. Bosses tend to like to have their own name up there, too, so that’s a good way to convince someone of the value of this, in addition to safety and health protocols.

- If you can have them do a background screen that has their office – so that it looks like they are speaking from their desk at HQ – that really seems to work well. I think it gives the audience some reassurance and reminds them of being in the actual office. If possible, have someone take a really high quality photo of your exec’s office and upload it as a background for them for this purpose.

- Write out a full script with stage directions, speeches, etc just like you would a play on stage. Make sure everyone on your team gets a copy ahead of time. It can be a lifesaver when it comes to logistics – sometimes speakers realize that they need to switch the order or add some detail that you have overlooked. And if they all know the order of things and have it written out at their own locations it helps you tremendously.

- Test ahead of time in a dry run/dress rehearsal and have everyone attend if possible and do their presentations. Sound: Some people really shout into the microphone when they get going, and that makes it hard to hear. It is nice if you can give them this feedback with a group of practice listeners so that they optimize the volume before the real town hall. (We have one speaker that now knows she must sit back a bit from her mic and now her volume is better, for example.) Backgrounds, see above.

- We also offered people official backgrounds that they could use with our logo… this has helped keep distractions to a minimum and also provided a uniform brand look for our team. Some people like the anonymity of that, and appreciate being able to protect their privacy.

Good luck!

Alison Gillespie
Communications Specialist
Office of the National Science Board
Laura,

We’ve done such events. We can talk details offline, but the comms summary is:

- ZoomGov (the Fedramp cloud version) works well and can accommodate 10,000 webinar participants.
- Use the Webinar tool, NOT the meeting.
- Assign at least 2 co-hosts (to manage questions, highlight speakers, and manage/admit/support attendees).
- PRACTICE. PRACTICE. PRACTICE. Have all hosts and presenters for a full run-through so they are familiar with the controls.
- Accessibility: ensure FedRCC captions are setup and communicated. Hire an ASL interpreter and be sure they are at the practice session. And, send a copy of the (accessible!) presentation to all attendees.
- Consider questions or requests to speak into the meeting via email as some people have trouble with the Q&A interface.
- During the event: HIGHLIGHT the appropriate presenter or attendee if speaking. Encourage use of the chat function to engage in open conversations, and have a Co-host monitor and ping presenters about some key takeaways.
- Always use the cloud recording function, it will do a decent job of auto-captioning the video, and it allows in-line editing for easy correction.
- Don’t forget to do a post-event survey!

Subject: [CONTENT-MANAGERS-L] Best practices for virtual Townhalls/All hands meetings

I know others have been doing Townhalls during the pandemic – what’s worked well for you in this totally remote format?

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!

- How best to replicate the energy of a townhall in the virtual format so it doesn’t drag?
  Don’t try – you can’t. This is a totally different type of experience and if you attempt to replicate the in-person experience it will probably fall flat. Instead you’ll need to focus on getting the pace and tempo right. Online sessions will need to go at a quicker pace to keep the participants engaged. There is a much greater likelihood that people will be multi-tasking during these sessions so if you want to hold their attention, especially if the session is going to be long, intersperse the dialog with interactive elements such as poll questions, visuals/graphics, very short video clips, etc. Keep the pace flowing though.

- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
  We do this fairly often and it’s worked well but you’ll need the input of your IT staff to understand bandwidth requirements, etc. Folks at home will also need to find out (in advance) what their individual ISPs and home network setups are capable of. One exec with a slow home connection will mess up the entire tempo of the presentation.

- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
  We’ve done this too once or twice but you will have different audio/visual issues to contend with than on a web session. Camera angles online may not come out looking as great in large spaces and resolutions on computer screens can often be better than what you’d get on a TV screen (especially older ones) so a poor A/V setup in an auditorium will definitely show badly on the web session. Also bear in mind that any Q&A or live feedback sessions will require back-and-forth between
moderators/presenters and the audience to a much greater extent and to a much greater level of technical complexity than you’d have with just handing a microphone to an audience member in a live setting. If you’re going to try this you should do a dry run first to make sure it’s going to work, and to make sure it’s going to look good. (I also don’t know what your auditorium setup is…if it’s not already set up with broadcast infrastructure you may not want to go this route.)

- [No need to give “me” the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn’t work, please share.]

- If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
  This depends. If the executive team has been working closely together for a while and has a good group dynamic then it may not be necessary.

- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to an email in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
  Having questions submitted in advance and having someone designated to monitor (and sometimes respond directly to) the text chat has worked well for us.

- We have the usual bandwidth concerns, but are there other tech issues I’m not thinking of?
  Test computer capabilities in advance, especially with the cameras on laptops, etc. We ran into an issue which no one initially suspected…with Windows 10 various programs have to be given “permission” to use peripherals like external or even integrated cameras, but the ability to grant that “permission” was locked out if you weren’t an administrator. So a lot of employees simply could not get their web cameras to work, and could not figure out why. I’d recommend you test every feature and function you think you’re going to need before you hold this session because there’s no end to the small, unexpected things that will come up. One other thing, though – you should set expectations in advance about who is going to have cameras on, how you will control whether everyone is muted or is allowed to have their mics open, etc. I think you will have some staff who will leave their cameras off the whole time, and be “present” but not otherwise attentive or engaged. So you’ll have to decide whether you want to address that, or let it be. There are pros and cons to both approaches. That being said, if you do require everyone to keep their cameras on at all times, get an understanding in advance of how this will affect the network. Three hundred live cameras on a zoom call might be too much for your network; I don’t know. (Note I’m also ignoring secondary issues like whether your staff belong to a union and whether you’d have a problem if you tried to tell them they all had to keep cameras on, etc. I’ll leave that to you.)

Thank you all in advance for your advice,
~Laura

Wow! Such great advice from John, Alison, Shawn and Jim - THANK YOU. I will let the group know how it works out, so you can learn from my experience too.

To answer someone’s question, I’ve confirmed with our conference services that we will be using Webex for the executives who have speaking roles, and then broadcasting the feed from Webex out via REV/VBRICK to the employees.

REV/VBRICK has a chat functions, but primarily is a streaming/broadcasting platform, so we won't have 1,000s of people turning on cameras or needing to unmute to ask questions.

~Laura
Agreed – test early and often and do at least one practice run. Also:
- Ensure that you have live captioning service (aka CART). Automated captioning is getting better, but it can stop without warning, plus live captioners should be given names, acronyms, and other key terms in advance for correct spelling.
- If ASL interpreting is requested, you will need to know how to ensure that attendees can pin the interpreter. If you don’t know how, or can’t ensure that it can be done, you will get into trouble quickly. So ensure that the dry run includes the interpreter.
- Repeat questions before you answer and other similar best practices.

Best of luck,

Related to this discussion, there will be a 1/13 meeting by the US Access Board on conducting virtual meetings and events that are accessible to persons with disabilities...

**U.S. Access Board’s January Meeting to Address Access to Virtual Platforms (January 13)**

The widespread transition to telework due to the coronavirus pandemic has made use of virtual meetings and conferences commonplace. It is important that platforms for remote events are inclusive of everyone. The U.S. Access Board’s January meeting, which is open to the public, will feature a presentation on conducting virtual meetings and events that are accessible to persons with disabilities. Guest speakers from the Department of Homeland Security and the Federal Communications Commission will explain what makes virtual platforms accessible and highlight common access issues. They will also cover best practice recommendations and resources for platform accessibility.

The public is encouraged to attend the meeting that will take place on **January 13 from 2:00 – 4:00 (ET)**. For further information, contact Rose Marie Bunales at bunales@access-board.gov.

moderators/presenters and the audience to a much greater extent and to a much greater level of technical complexity than you’d have with just handing a microphone to an audience member in a live setting. If you’re going to try this you should do a dry run first to make sure it’s going to work, and to make sure it’s going to look good. (I also don’t know what your auditorium setup is…if it’s not already set up with broadcast infrastructure you may not want to go this route.)

- [No need to give “me” the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn’t work, please share.]
- If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
  This depends. If the executive team has been working closely together for a while and has a good group dynamic then it may not be necessary.
- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to a emailbox in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
  Having questions submitted in advance and having someone designated to monitor (and sometimes respond directly to) the text chat has worked well for us.
- We have the usual bandwidth concerns, but are there other tech issues I’m not thinking of?
  Test computer capabilities in advance, especially with the cameras on laptops, etc. We ran into an issue which no one initially suspected…with Windows 10 various programs have to be given “permission” to use peripherals like external or even integrated cameras, but the ability to grant that “permission” was locked out if you weren’t an administrator. So a lot of employees simply could not get their web cameras to work, and could not figure out why. I’d recommend you test every feature and function you think you’re going to need before you hold this session because there’s no end to the small, unexpected things that will come up. One other thing, though – you should set expectations in advance about who is going to have cameras on, how you will control whether everyone is muted or is allowed to have their mics open, etc. I think you will have some staff who will leave their cameras off the whole time, and be “present” but not otherwise attentive or engaged. So you’ll have to decide whether you want to address that, or let it be. There are pros and cons to both approaches. That being said, if you do require everyone to keep their cameras on at all times, get an understanding in advance of how this will affect the network. Three hundred live cameras on a zoom call might be too much for your network; I don’t know. (Note I’m also ignoring secondary issues like whether your staff belong to a union and whether you’d have a problem if you tried to tell them they all had to keep cameras on, etc. I’ll leave that to you.)

Thank you all in advance for your advice,
~Laura

For help with this listserv, to manage your settings, or to view list archives, visit...
In addition to the great feedback/ideas I've already seen (some of this is duplicative):

- **Slide decks**
  - Accessibility/Access to presentations – provide attendees the option to obtain any slide decks/materials beforehand. This is especially helpful if they utilize accessibility tools.
  - Slide decks/presentation materials – visibility of “eye chart” type slides can be spotty depending on the video streaming mechanism. Keeping things widely spaced out & with decent contrast (from a graphic design perspective) helps.

- **Access**
  - Depending on how your enterprise/users are set up, you may have issues if you select a streaming platform that is blocked.

- **Organize**
  - Absolutely have a moderator or ideally two -- an MC that’s on audio/video when needed to handle the speakers & agenda transitions, and a person monitoring chat for Q&A
  - Make sure everyone knows the agenda may be flexible/modular. If a speaker loses connectivity, punt to Q&A for 60 seconds and if they haven’t come back online, shuffle the agenda.
  - If possible, sending a “presenter in a box” kit (even if it’ll be returned afterward) with a pre-configured laptop, quality camera, tripod, lighting, microphone, etc. can eliminate a lot of variables and improve the quality

- **Facilitate/Format**
  - A good MC is invaluable… if you have the flexibility (and especially if your presenters aren’t dynamic speakers), changing the format so that there’s a routine switch between voices (versus a monologue) helps keep people engaged. When you send out your call-for-questions in advance, you could structure it so that you are asking for questions specific to topics that the execs already want to address as well as open questions. This creates a more responsive and interactive feel to the agenda… it’s a bit difficult to describe, but there’s a difference between:

  
  | MC: “And now our VP of Widgets, Jane.” | MC: “And now our VP of Widgets, Jane.” |
  | Jane: “Thanks Bob. I’m going to monologue for 15 minutes about the following things…. A) budget, B) strategy, and C) mission success.” | Jane: “Thanks Bob. {short intro}” |
  | ZZZzzzzzzzzz….zzzz….zzz. | MC: “Jane, folks are asking if you could address the budget situation. Specifically…” |
  | Jane: “Certainly. This fiscal year we’ve…” | Jane: “Certainly. This fiscal year we’ve…” |

- **Resiliency**
  - Have personnel immediately at hand that are attending the virtual event (as users will be) and able to provide real-time feedback
  - Have a person who will take over from another computer (or even location)
  - Have redundant means of connecting devices (such as WIFI and a cell hotspot). We do this when at hosting in-person events where we are broadcasting as well (event centers like hotels).
  - Be prepared to throw up a slide stating ‘we are have technical difficulties so please hold’ or ‘the event will be rescheduled’ could be very handy.

Regards,
--Ben

I know others have been doing Townhalls during the pandemic – what's worked well for you in this totally remote format?

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!

- How best to replicate the energy of a townhall in the virtual format so it doesn’t drag?
- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
  - [No need to give *me* the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I really appreciate all the extra effort you folks have put into this subject string. It is very timely for us as I’m sure it is for many other “silent observers”. Would anyone like to join a small team of experts for an ongoing discussion in a Microsoft Team? I’d create it and invite you to the group. I promise it will not be overwhelming. I plan to create a document from all these suggestions and could use that as our starting point for discussion.

I know others have been doing Townhalls during the pandemic – what's worked well for you in this totally remote format?

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!

- How best to replicate the energy of a townhall in the virtual format so it doesn’t drag?
- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
  - [No need to give “me” the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn’t work, please share.]
- If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to a emailbox in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
- We have the usual bandwidth concerns, but are there other tech issues I’m not thinking of?

Thank you all in advance for your advice,

~Laura

Some thoughts:

We’ve had presenters log in from their home offices. Because it is critical that speakers are comfortable and well prepared for the virtual format, conducting mandatory dry runs with speakers is highly recommended as it is an opportunity for them to learn the technology as well as a chance for the AV team to troubleshoot any potential audio, video or network issues and practice the transitions. Prior to the dry run, it is advised to share best practices for presenting on camera, such as tips on attire, and on setting up a good camera angle, lighting, and appropriate backgrounds.

Assign a slide manager and a backup. Just as in a live presentation, making eye contact is important. Screen sharing in some technologies unfortunately leave presenters feeling like they’re presenting in the dark, with many looking at only their slides and not the camera. My recommendation is to compile all the material from the presenters in advance on one slide deck a few days prior to the event, and to have a slide manager (and a back-up) dedicated to advancing slides.

Prepare housekeeping talking points to MCs to announce at the start. MC may not be experts in the technical platform, therefore it is critical that one provide them with messages to announce to attendees once the sessions start, such as how to participate in Q&A, where to send technical problems, and break times. Some platforms, like BlueJeans Events, have a separate Q&A areas for attendees submit questions for the Moderator and/or Presenters to answer. We’ve also used Slido for this.

Prepare a speaker ready room to review audio, sound, video of presenters prior to going live. Some platforms, like BlueJeans Events, offer this. Use this time to review the schedule, how the Q&A tools will be used, and to test their sound, video and network. More importantly, have a dial-in number ready to distribute if a presenter is experiencing significant network issues.

Best,
Gladys

And, to be redundant (in more ways than one), please include live captioning. You’d be surprised at how often it saves you when there are audio glitches. Plus it ensures equitable access for many.

In addition to the great feedback/ideas I’ve already seen (some of this is duplicative):

- **Slide decks**
  - Accessibility/Access to presentations – provide attendees the option to obtain any slide decks/materials beforehand. This is especially helpful if they utilize accessibility tools.
  - Slide decks/presentation materials – visibility of “eye chart” type slides can be spotty depending on the video streaming mechanism. Keeping things widely spaced out & with decent contrast (from a graphic design perspective) helps.

- **Access**
  - Depending on how your enterprise/users are set up, you may have issues if you select a streaming platform that is blocked.

- **Organize**
  - Absolutely have a moderator or ideally two -- an MC that’s on audio/video when needed to handle the speakers & agenda transitions, and a person monitoring chat for Q&A
  - Make sure everyone knows the agenda may be flexible/modular. If a speaker loses connectivity, punt to Q&A for 60 seconds and if they haven’t come back online, shuffle the agenda.
  - If possible, sending a “presenter in a box” kit (even if it’ll be returned afterward) with a pre-configured laptop, quality camera, tripod, lighting, microphone, etc. can eliminate a lot of variables and improve the quality

- **Facilitate/Format**
  - A good MC is invaluable… if you have the flexibility (and especially if your presenters aren’t dynamic speakers), changing the format so that there’s a routine switch between voices (versus a monologue) helps keep people engaged. When you send out your call-for-questions in advance, you could structure it so that you are asking for questions specific to topics that the

When you send out your call-for-questions in advance, you could structure it so that you are asking for questions specific to topics that the execs already want to address as well as open questions. This creates a more responsive and interactive feel to the agenda… it’s a bit difficult to describe, but there’s a difference between:

  | MC: “And now our VP of Widgets, Jane.” | MC: “And now our VP of Widgets, Jane.” |
  | Jane: “Thanks Bob. I’m going to monologue for 15 minutes about the following things…. A) budget, B) strategy, and C) mission success.” | Jane: “Thanks Bob. {short intro}” |
  | ZZZzzzzzzzz….zzzz…zzz. | MC: “Jane, folks are asking if you could address the budget situation. Specifically, …” |
  | Jane: “Certainly. This fiscal year we’ve…” |

- **Resiliency**
  - Have personnel immediately at hand that are attending the virtual event (as users will be) and able to provide real-time feedback
  - Have a person who will take over from another computer (or even location)
  - Have redundant means of connecting devices (such as WiFi and a cell hotspot). We do this when at hosting in-person events where we are broadcasting as well (event centers like hotels).
  - Be prepared to throw up a slide stating ‘we are have technical difficulties so please hold’ or ‘the event will be rescheduled’ could be very handy.

Say goodbye to your paper forms.

FormService provides mobile-first **digital forms** with **e-signatures** for the federal government.

**Overview**
FormService is a secure and accessible way for agencies to provide their users with a seamless form-filling experience. Using our platform, your agency can easily convert static, error-prone PDFs into dynamic digital forms. Once digitized, forms can be embedded into your existing agency websites with your own branding. The forms are responsive, compliant, and fully accessible from any device.

**Why FormService?**

- **Simplifies form digitization** with an intuitive form builder, e-signature capability, portals for developers and non-technical users alike
- **Provides built-in compliance** with 21st Century IDEA, CASES Act, ESIGN Act, Sec. 508 and FISMA
- **Offers flexible integration** with API and data management services
- **Increases operational efficiencies** with improved data quality, reduced paperwork and enhanced employee productivity
- **Secure multifactor authentication and identity proofing** through our built-in Login.gov integration or your own IAM solution
- **Free to try** with a sandbox account
- **Includes tailored support packages** to assist and guide your agency with a broad range of forms modernization needs
- **Easily purchased** through the federal Interagency Agreement (IAA) process

Learn more and become a partner at [formservice@gsa.gov](mailto:formservice@gsa.gov)

FormService is part of the Technology Transformation Services within the General Services Administration
Our Offerings

Easy-to-implement Digital Forms
The options for agencies looking to digitize forms are often slow, inefficient, and not up to the task of converting a massive forms backlog.

FormService enables form building and data collection with a drag-and-drop form builder. Converting thousands of paper forms is simple: You upload a PDF form then rapidly build the digital version, which will be mobile-first, accessible, and compliant out of the box. The forms are easy to embed on your agency’s website with a simple code snippet. Secure API endpoints are automatically generated and make the form submission JSON data available in real-time for integration with your business applications and backend systems.

Secure and Speedy eSignatures
FormService forms include seamless eSignatures. This allows end users to sign forms on any device with a legally binding signature. eSignatures eliminate the need for printing, scanning, faxing and mailing documents, making the process faster and more accessible for all users.

All-in-One Solution for Government Forms

I know I can’t use my Sharepoint across agencies either. Tried that the other day. This is part of your CIO’s Microsoft 360 account. It shouldn’t have access outside your intranet.

Our facility does not have the ZoomGOV subscription, though I can join ZoomGOV meetings. I wonder if it would allow a Team-like discussion/chat group across agencies? I also have Slack, though I don’t know if it would cross agencies.

Work with your CIO office. Many of the meetings platforms require expensive fee’s and they don’t advertise to the entire agency what is available. They might have a solution for you. At the DOJ, prior to Covid, all the meeting platforms were primarily only available within the agency. Once Covid forced us to operate differently, they invested in making some of the services (WebEx and Teams) available to those outside the agency.

Thoughts? (I’ve already gotten several who want to join)

And, to be redundant (in more ways than one), please include live captioning. You’d be surprised at how often it saves you when there are audio glitches. Plus it ensures equitable access for many.

In addition to the great feedback/ideas I’ve already seen (some of this is duplicative):

- Slide decks
  - Accessibility/Access to presentations – provide attendees the option to obtain any slide decks/materials beforehand. This is especially helpful if they utilize accessibility tools.  
  - Slide decks/presentation materials – visibility of “eye chart” type slides can be spotty depending on the video streaming mechanism. Keeping things widely spaced out & with decent contrast (from a graphic design perspective) helps.
- Access
  - Depending on how your enterprise/users are set up, you may have issues if you select a streaming platform that is blocked.
- Organize
  - Absolutely have a moderator or ideally two -- an MC that’s on audio/video when needed to handle the speakers & agenda transitions, and a person monitoring chat for Q&A.  
  - Make sure everyone knows the agenda may be flexible/modular. If a speaker loses connectivity, punt to Q&A for 60 seconds and if they haven’t come back online, shuffle the agenda.  
  - If possible, sending a “presenter in a box” kit (even if it'll be returned afterward) with a pre-configured laptop, quality camera, tripod, lighting, microphone, etc. can eliminate a lot of variables and improve the quality.
- Facilitate/Format
A good MC is invaluable… if you have the flexibility (and especially if your presenters aren’t dynamic speakers), changing the format so that there’s a routine switch between voices (versus a monologue) helps keep people engaged. When you send out your call-for-questions in advance, you could structure it so that you are asking for questions specific to topics that the execs already want to address as well as open questions. This creates a more responsive and interactive feel to the agenda… it’s a bit difficult to describe, but there’s a difference between:

<table>
<thead>
<tr>
<th>MC: “And now our VP of Widgets, Jane.”</th>
<th>MC: “And now our VP of Widgets, Jane.”</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jane: “Thanks Bob. I’m going to monologue for 15 minutes about the following things…. A) budget, B) strategy, and C) mission success.”</td>
<td>Jane: “Thanks Bob. {short intro}”</td>
</tr>
<tr>
<td>ZZZzzzzzzzzzz….zzzz…zzz.</td>
<td>MC: “Jane, folks are asking if you could address the budget situation. Specifically,…”</td>
</tr>
<tr>
<td>Jane: “Certainly. This fiscal year we’ve…”</td>
<td></td>
</tr>
</tbody>
</table>

- Resiliency
  - Have personnel immediately at hand that are attending the virtual event (as users will be) and able to provide real-time feedback
  - Have a person who will take over from another computer (or even location)
  - Have redundant means of connecting devices (such as WIFI and a cell hotspot). We do this when at hosting in-person events where we are broadcasting as well (event centers like hotels).
  - Be prepared to throw up a slide stating ‘we are have technical difficulties so please hold’ or ‘the event will be rescheduled’ could be very handy.

To: CONTENT-MANAGERS-L@LISTSERV.GSA.GOV
Subject: [CONTENT-MANAGERS-L] Best practices for virtual Townhalls/All hands meetings

I know others have been doing Townhalls during the pandemic – what's worked well for you in this totally remote format?

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!
- How best to replicate the energy of a townhall in the virtual format so it doesn’t drag?
- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
  - [No need to give "me" the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn’t work, please share.]
- If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
time when cameras are switching between speakers? 

- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to a mailbox in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
- We have the usual bandwidth concerns, but are there other tech issues I'm not thinking of?

Thank you all in advance for your advice,
~Laura

Exactly. It all has to do with software licenses (says the federal PAO who used to work for a software company). Some federal agencies only purchased single agency MS Teams licenses and others may have purchased for use outside the original/parent agency. Your OCIO could tell you easily.

Regards,

Bridget
I tested and Jim is correct. Can’t use Team across agencies. That is unfortunate. This may be blocked by your CIO department. I used Teams outside the agency when I was at DOJ.

I know I can’t use my Sharepoint across agencies either. Tried that the other day. This is part of your CIO’s Microsoft 360 account. It shouldn’t have access outside your intranet.

Our facility does not have the ZoomGOV subscription, though I can join ZoomGOV meetings. I wonder if it would allow a Team-like discussion/chat group across agencies? I also have Slack, though I don’t know if it would cross agencies. Work with your CIO office. Many of the meetings platforms require expensive fee’s and they don’t advertise to the entire agency what is available. They might have a solution for you. At the DOJ, prior to Covid, all the meeting platforms were primarily only available within the agency. Once Covid forced us to operate differently, they invested in making some of the services (WebEx and Teams) available to those outside the agency.

Thoughts? (I’ve already gotten several who want to join)

Subject: [EXTERNAL] RE: Best practices for virtual Townhalls/All hands meetings

Some of our Departments or Agencies allow for chatting with people who are outside of your Department/Agency, but I doubt you will be able to leverage Teams with Microsoft Teams to invite external participants. This site is slightly outdated, but it gives you insight into some common questions regarding Teams.

That being said you could leverage a SharePoint site to collaborate if your Department/Agency allows external access.

Feel free to invite me and I can try to fill in whatever blanks I can assist with,

Jim

I really appreciate all the extra effort you folks have put into this subject string. It is very timely for us as I’m sure it is for many other “silent observers”. Would anyone like to join a small team of experts for an ongoing discussion in a Microsoft Team? I’d create it and invite you to the group. I promise it will not be overwhelming. I plan to create a document from all these suggestions and could use that as our starting point for discussion.

And, to be redundant (in more ways than one), please include live captioning. You’d be surprised at how often it saves you when there are audio glitches. Plus it ensures equitable access for many.

In addition to the great feedback/ideas I’ve already seen (some of this is duplicative):

- **Slide decks**
  - Accessibility/Access to presentations – provide attendees the option to obtain any slide decks/materials beforehand. This is especially helpful if they utilize accessibility tools.
  - Slide decks/presentation materials – visibility of “eye chart” type slides can be spotty depending on the video streaming mechanism. Keeping things widely spaced out & with decent contrast (from a graphic design perspective) helps.

- **Access**
  - Depending on how your enterprise/users are set up, you may have issues if you select a streaming platform that is blocked.

- **Organize**
  - Absolutely have a moderator or ideally two -- an MC that’s on audio/video when needed to handle the speakers & agenda transitions, and a person monitoring chat for Q&A
  - Make sure everyone knows the agenda may be flexible/modular. If a speaker loses connectivity, punt to Q&A for 60 seconds and if they haven’t come back online, shuffle the agenda.
  - If possible, sending a “presenter in a box” kit (even if it’ll be returned afterward) with a pre-configured laptop, quality camera, tripod, lighting, microphone, etc. can eliminate a lot of variables and improve the quality

- **Facilitate/Format**
  - A good MC is invaluable… if you have the flexibility (and especially if your presenters aren’t dynamic speakers), changing the format so that there’s a routine switch between voices (versus a monologue) helps keep people engaged. Let me clarify further for you Shawn. Our Department has an external file sharing site setup within SharePoint, which we use for sharing files with people externally. It leverages multi-factor authentication and is fully accessible by people who the administrators give rights to.

We however don’t leverage it for anything other than file sharing.

Unfortunately there are still a fair amount of Agencies or Departments who block external access to Teams meetings or you could leverage that to create a Team meeting in which you could share/post files and chat within it.

Have a great weekend,

Jim

Subject: [CONTENT-MANAGERS-L] Best practices for virtual Townhalls/All hands meetings

I know others have been doing Townhalls during the pandemic – what's worked well for you in this totally remote format?

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!
- How best to replicate the energy of a townhall in the virtual format so it doesn't drag?
- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
  - [No need to give “me” the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn’t work, please share.]
- If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to a emailbox in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
- We have the usual bandwidth concerns, but are there other tech issues I’m not thinking of?

Thank you all in advance for your advice,
~Laura

Syed,

I would be willing to help, but is the testing to be done within each agencies’ firewall or outside? Also, I do not understand what is meant by “sandbox?”

Does anyone in this group have a good template for a run of show for virtual events?

I will also offer my #1 tip for virtual events: The host should have some tricks up their sleeves for technical disruptions! For example, during a recent event I was hosting one of the presenters' internet went out. The other host and I didn't miss a beat. We had discussion questions on the top lined up and we gave a mini presentation while the original speaker was able to get back on. Other ideas could be to do an audience poll or do a quick "game" like trivia on the subject. I always line something up, because a tech disruption can tank an event!

Gabbie

And, to be redundant (in more ways than one), please include live captioning. You’d be surprised at how often it saves you when there are audio glitches. Plus it ensures equitable access for many.
In addition to the great feedback/ideas I’ve already seen (some of this is duplicative):

- Slide decks
  - Accessibility/Access to presentations – provide attendees the option to obtain any slide decks/materials beforehand. This is especially helpful if they utilize accessibility tools.
  - Slide decks/presentation materials – visibility of “eye chart” type slides can be spotty depending on the video streaming mechanism. Keeping things widely spaced out & with decent contrast (from a graphic design perspective) helps.

- Access
  - Depending on how your enterprise/users are set up, you may have issues if you select a streaming platform that is blocked.

- Organize
  - Absolutely have a moderator or ideally two -- an MC that’s on audio/video when needed to handle the speakers & agenda transitions, and a person monitoring chat for Q&A
  - Make sure everyone knows the agenda may be flexible/modular. If a speaker loses connectivity, punt to Q&A for 60 seconds and if they haven’t come back online, shuffle the agenda.
  - If possible, sending a “presenter in a box” kit (even if it’ll be returned afterward) with a pre-configured laptop, quality camera, tripod, lighting, microphone, etc. can eliminate a lot of variables and improve the quality

- Facilitate/Format
  - A good MC is invaluable… if you have the flexibility (and especially if your presenters aren’t dynamic speakers), changing the format so that there’s a routine switch between voices (versus a monologue) helps keep people engaged. When you send out your call-for-questions in advance, you could structure it so that you are asking for questions specific to topics that the execs already want to address as well as open questions. This creates a more responsive and interactive feel to the agenda… it’s a bit difficult to describe, but there’s a difference between:

  | MC: “And now our VP of Widgets, Jane.” | MC: “And now our VP of Widgets, Jane.” |
  | Jane: “Thanks Bob. I’m going to monologue for 15 minutes about the following things…. A) budget, B) strategy, and C) mission success.” | Jane: “Thanks Bob. {short intro}” |
  | ZZZzzzzzzz….zzzz…zzz. | MC: “Jane, folks are asking if you could address the budget situation. Specifically, …” |
  | Jane: “Certainly. This fiscal year we’ve…” |

- Resiliency
Have personnel immediately at hand that are attending the virtual event (as users will be) and able to provide real-time feedback

- Have a person who will take over from another computer (or even location)
- Have redundant means of connecting devices (such as WIFI and a cell hotspot). We do this when at hosting in-person events where we are broadcasting as well (event centers like hotels).
- Be prepared to throw up a slide stating ‘we are have technical difficulties so please hold’ or ‘the event will be rescheduled’ could be very handy.

DoD offers a platform called APAN that government folks could use for sharing lessons learned and drafting documents about virtual townhalls and all hands meetings. It’s at https://www.apan.org/ and they have support staff who can help you set up the community.

The All Partners Access Network (APAN) is the premier unclassified information sharing and collaboration enterprise for the United States Department of Defense (DOD). APAN provides the DOD and mission partners community spaces and collaborative tools to leverage information to effectively plan, train and respond to meet their business requirements and mission objectives. APAN makes these tools available over the open internet so individuals and organizations who do not have access to traditional DOD systems and networks can participate in information sharing and collaborative events.

I tested and Jim is correct. Can’t use Team across agencies. That is unfortunate. This may be blocked by your CIO department. I used Teams outside the agency when I was at DOJ.

I know I can’t use my Sharepoint across agencies either. Tried that the other day. This is part of your CIO’s Microsoft 360 account. It shouldn’t have access outside your intranet.

Our facility does not have the ZoomGOV subscription, though I can join ZoomGOV meetings. I wonder if it would allow a Team-like discussion/chat group across agencies? I also have Slack, though I don’t know if it would cross agencies.

Work with your CIO office. Many of the meetings platforms require expensive fee’s and they don’t advertise to the entire agency what is available. They might have a solution for you. At the DOJ, prior to Covid, all the meeting platforms were primarily only available within the agency. Once Covid forced us to operate differently, they invested in making some of the services (WebEx and Teams) available to those outside the agency.

Thoughts? (I’ve already gotten several who want to join)

Subject: [EXTERNAL] RE: Best practices for virtual Townhalls/All hands meetings

Some of our Departments or Agencies allow for chatting with people who are outside of your Department/Agency, but I doubt you will be able to leverage Teams with Microsoft Teams to invite external participants. This site is slightly outdated, but it gives you insight into some common questions regarding Teams.

That being said you could leverage a SharePoint site to collaborate if your Department/Agency allows external access.
Feel free to invite me and I can try to fill in whatever blanks I can assist with,

Jim

I really appreciate all the extra effort you folks have put into this subject string. It is very timely for us as I’m sure it is for many other “silent observers”. Would anyone like to join a small team of experts for an ongoing discussion in a Microsoft Team? I’d create it and invite you to the group. I promise it will not be overwhelming. I plan to create a document from all these suggestions and could use that as our starting point for discussion.

It's that time again!

The Accessibility Community of Practice and the General Services Administration’s governmentwide Section 508 team are beginning preparations for the 2021 Interagency Accessibility Forum (IAAF) and we’re inviting YOU to take part.

If you’re interested in being on the committee:

- Email iaaf@gsa.gov and include “IAAF 2021 Planning Committee” in the subject line. Please submit your interest by cob, Friday, January 15, 2021.

- Time requirement: participate in monthly planning meetings starting February 10 at 10:30 AM ET. We will follow up with additional details once volunteers are confirmed. Meetings will increase in frequency to twice monthly after August to make sure we are staying on course.

If your agency would like to be a sponsor:

- Agency sponsorship provides a great opportunity to showcase your agency’s accessibility commitment. IAAF sponsors are expected to help gain executive support and interest in the Forum, and provide other tangible ‘in-kind’ contributions to the event. Let us know and we can provide further information.

A large part of the success of the 2020 IAAF was the true “interagency” spirit embodied by all the volunteers and attendees. With your help, we can make this event an even bigger success than last year. We look forward to hearing from you!

Hi everyone.

We discovered that on our site, in each web page’s source code, a Google tag manager code revealed who edited that page.

I strongly believe the public needs to know the organization who owns each page, including even individual units within an agency, but we should not reveal staff names, especially in these times when people can find personal information with only a name and an employer.

We’ve removed that code. Please make sure nothing in your system reveals staff names associated with specific pages, whether it’s that code or anything else.

I'm going to guess that the "last edited by" value was purposefully being sent to the DOM by your CMS and presented within the GTM datalayer array. The reason might be in order to use it as a custom dimension within Google Analytics to facilitate custom reports for each person on "their" pages. My hunch is that this isn't something done with GTM, but by the CMS. Curious to know if that's the case! (I've seen this concept of passing along people's names in this way described in a web analytics blog or two.)

Sincerely,
David Kaufmann

I tested and Jim is correct. Can’t use Team across agencies. That is unfortunate. This may be blocked by your CIO department. I used Teams outside the agency when I was at DOJ.

I know I can’t use my Sharepoint across agencies either. Tried that the other day. This is part of your CIO’s Microsoft 360 account. It shouldn’t have access outside your intranet.

Our facility does not have the ZoomGOV subscription, though I can join ZoomGOV meetings. I wonder if it would allow a Team-like discussion/chat group across agencies? I also have Slack, though I don’t know if it would cross agencies.

Work with your CIO office. Many of the meetings platforms require expensive fee’s and they don’t advertise to the entire agency what is available. They might have a solution for you. At the DOJ, prior to Covid, all the meeting platforms were primarily only available within the agency. Once Covid forced us to operate differently, they invested in making some of the services (WebEx and Teams) available to those outside the agency.

Thoughts? (I’ve already gotten several who want to join)

Subject: [EXTERNAL] RE: Best practices for virtual Townhalls/All hands meetings

Some of our Departments or Agencies allow for chatting with people who are outside of your Department/Agency, but I doubt you will be able to leverage Teams with Microsoft Teams to invite external participants. This site is slightly outdated, but it gives you insight into some common questions regarding Teams.

That being said you could leverage a SharePoint site to collaborate if your Department/Agency allows external access.

Feel free to invite me and I can try to fill in whatever blanks I can assist with,

Jim

And, to be redundant (in more ways than one), please include live captioning. You’d be surprised at how often it saves you when there are audio glitches. Plus it ensures equitable access for many.

---

**Slide decks**
- Accessibility/Access to presentations – provide attendees the option to obtain any slide decks/materials beforehand. This is especially helpful if they utilize accessibility tools.
- Slide decks/presentation materials – visibility of “eye chart” type slides can be spotty depending on the video streaming mechanism. Keeping things widely spaced out & with decent contrast (from a graphic design perspective) helps.

**Access**
- Depending on how your enterprise/users are set up, you may have issues if you select a streaming platform that is blocked.

**Organize**
- Absolutely have a moderator or ideally two -- an MC that’s on audio/video when needed to handle the speakers & agenda transitions, and a person monitoring chat for Q&A
- Make sure everyone knows the agenda may be flexible/modular. If a speaker loses connectivity, punt to Q&A for 60 seconds and if they haven’t come back online, shuffle the agenda.
- If possible, sending a “presenter in a box” kit (even if it’ll be returned afterward) with a pre-configured laptop, quality camera, tripod, lighting, microphone, etc. can eliminate a lot of variables and improve the quality

**Facilitate/Format**
- A good MC is invaluable… if you have the flexibility (and especially if your presenters aren’t dynamic speakers), changing the format so that there’s a routine switch between voices (versus a monologue) helps keep people engaged. When you send out your call-for-questions in advance, you could structure it so that you are asking for questions specific to topics that the execs already want to address as well as open questions. This creates a more responsive and interactive feel to the agenda… it’s a bit difficult to describe, but there’s a difference between:

  MC: “And now our VP of Widgets, Jane.”
  Jane: “Thanks Bob. I’m going to monologue for 15 minutes about the following things…. A) budget, B) strategy, and C) mission success.”
  ****Zzzzzzzzzzz…zzz…zzz.

  MC: “And now our VP of Widgets, Jane.”
  Jane: “Thanks Bob. {short intro}”
  MC: “Jane, folks are asking if you could address the budget situation. Specifically,…”
  Jane: “Certainly. This fiscal year we’ve…”

**Resiliency**
- Have personnel immediately at hand that are attending the virtual event (as users will be) and able to provide real-time feedback
- Have a person who will take over from another computer (or even location)
- Have redundant means of connecting devices (such as WIFI and a cell hotspot). We do this when at hosting in-person events where we are broadcasting as well (event centers like hotels).
- Be prepared to throw up a slide stating ‘we are have technical difficulties so please hold’ or the

Subject: [CONTENT-MANAGERS-L] Best practices for virtual Townhalls/All hands meetings

I know others have been doing Townhalls during the pandemic – what's worked well for you in this totally remote format?

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!

- How best to replicate the energy of a townhall in the virtual format so it doesn't drag?
- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
  - [No need to give *me* the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn't work, please share.]
  - If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to an email box in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
- We have the usual bandwidth concerns, but are there other tech issues I’m not thinking of?

Thank you all in advance for your advice,
~Laura

I've not been able to find a virtual solution (within VA) that allows interagency discussion. Teams will do this, but as a VA employee, I cannot invite others outside VA to my Team (at least not in my IT region I can't). If anyone is willing to create a Microsoft Team that allows both state and federal agencies to join, I can send you a list of email addresses of fellow communicators who want to join the discussion. This would be an excellent group and capitalize on what Teams is for.

Everyone,

Also wanted to highlight that if anyone is using the ‘datalayer’ module in conjunction with Google Tag manager, be sure to configure the metadata section under admin/config/search/datalayer to not send out ‘name’ or ‘uid’ as this will expose your usernames on your public site.

*We run Drupal here, so this may be a different process in wordpress, or another CMS system

Note that not having anything checked in the metadata or vocabulary sections tells datalayer to expose all, so be sure to select at least some (like below). The minimum would probably be language. The ‘Vocabularies’ section will be specific to your site, and may differ from what you see below. ‘Vocabularies’ are listings of your taxonomy tags and you may leave it default (nothing checked) or specify which vocabularies to expose, depending on your configuration and business needs.

<table>
<thead>
<tr>
<th>Global</th>
</tr>
</thead>
<tbody>
<tr>
<td>☑ Add entity meta data to pages</td>
</tr>
<tr>
<td>☑ Include taxonomy terms</td>
</tr>
<tr>
<td>☐ Include &quot;data layer helper&quot; library</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Meta data</th>

Hi everyone.

We discovered that on our site, in each web page's source code, a Google tag manager code revealed who edited that page.

I strongly believe the public needs to know the organization who owns each page, including even individual units within an agency, but we should not reveal staff names, especially in these times when people can find personal information with only a name and an employer.

We've removed that code. Please make sure nothing in your system reveals staff names associated with specific pages, whether it's that code or anything else.

To unsubscribe from the CONTENT-MANAGERS-L list, create a new email message, addressed to CONTENT-MANAGERS-L-unsubscribe-request@listserv.gsa.gov. The message content does not matter and the sender's email address will be removed from the list.

The Communities of Practice are hosted by https://digital.gov, a service of the Technology Transformation Service (TTS) within the General Services Administration (GSA). GSA is an independent agency of the federal government.

Good afternoon, all!

I am hoping you would be open to sharing any sample text you used to inform your agency (or components) of exercises related to 21st Century IDEA compliance in any aspect (internet, intranet, forms, digital services, eSignatures, etc.) For example, if you were kicking off associated data calls as part of the implementation deadlines, or focusing on specific aspects to remediate, I am interested in them all!

If you have any questions please feel free to reach out to me and I’m happy to clarify.

Thanks very much in advance!

Soly

I've not been able to find a virtual solution (within VA) that allows interagency discussion. Teams will do this, but as a VA employee, I cannot invite others outside VA to my Team (at least not in my IT region I can't). If anyone is willing to create a Microsoft Team that allows both state and federal agencies to join, I can send you a list of email addresses of fellow communicators who want to join the discussion. This would be an excellent group and capitalize on what Teams is for.

Hello all,

I am also interested in participating in a deeper discussion on this topic. Hopefully state agencies can be included as this is all very timely to all the work we are doing.

Thank you,

Communications Director

Shawn,

Excellent comments!

I have access to WebEx, which has an excellent chalkboard tool as well.

I am going to test that – the team keeps growing.

I tested and Jim is correct. Can’t use Team across agencies. That is unfortunate. This may be blocked by your CIO department. I used Teams outside the agency when I was at DOJ.

I know I can’t use my Sharepoint across agencies either. Tried that the other day. This is part of your CIO’s Microsoft 360 account. It shouldn’t have access outside your intranet.

Our facility does not have the ZoomGOV subscription, though I can join ZoomGOV meetings. I wonder if it would allow a Team-like discussion/chat group across agencies? I also have Slack, though I don’t know if it would cross agencies.

Work with your CIO office. Many of the meetings platforms require expensive fee’s and they don’t advertise to the entire agency what is available. They might have a solution for you. At the DOJ, prior to Covid, all the meeting platforms were primarily only available within the agency. Once Covid forced us to operate differently, they invested in making some of the services (WebEx and Teams) available to those outside the agency.

Thoughts? (I’ve already gotten several who want to join)

Subject: [EXTERNAL] RE: Best practices for virtual Townhalls/All hands meetings

Some of our Departments or Agencies allow for chatting with people who are outside of your Department/Agency, but I doubt you will be able to leverage Teams with Microsoft Teams to invite external participants. This site is slightly outdated, but it gives you insight into some common questions regarding Teams.

That being said you could leverage a SharePoint site to collaborate if your Department/Agency allows external access.
Feel free to invite me and I can try to fill in whatever blanks I can assist with,

Jim

I really appreciate all the extra effort you folks have put into this subject string. It is very timely for us as I’m sure it is for many other “silent observers”. Would anyone like to join a small team of experts for an ongoing discussion in a Microsoft Team? I’d create it and invite you to the group. I promise it will not be overwhelming. I plan to create a document from all these suggestions and could use that as our starting point for discussion.

Subject: Re: [CONTENT-MANAGERS-L] Best practices for virtual Townhalls/All hands meetings

In addition to the great feedback/ideas I’ve already seen (some of this is duplicative):

- Slide decks
  - Accessibility/Access to presentations – provide attendees the option to obtain any slide decks/materials beforehand. This is especially helpful if they utilize accessibility tools.
  - Slide decks/presentation materials – visibility of “eye chart” type slides can be spotty depending on the video streaming mechanism. Keeping things widely spaced out & with decent contrast (from a graphic design perspective) helps.
- Access
  - Depending on how your enterprise/users are set up, you may have issues if you select a streaming platform that is blocked.
- Organize
  - Absolutely have a moderator or ideally two -- an MC that’s on audio/video when needed to handle the speakers & agenda transitions, and a person monitoring chat for Q&A
- Make sure everyone knows the agenda may be flexible/modular. If a speaker loses connectivity, punt to Q&A for 60 seconds and if they haven’t come back online, shuffle the agenda.
- If possible, sending a "presenter in a box" kit (even if it’ll be returned afterward) with a pre-configured laptop, quality camera, tripod, lighting, microphone, etc. can eliminate a lot of variables and improve the quality.

- Facilitate/Format
  - A good MC is invaluable… if you have the flexibility (and especially if your presenters aren’t dynamic speakers), changing the format so that there’s a routine switch between voices (versus a monologue) helps keep people engaged. When you send out your call-for-questions in advance, you could structure it so that you are asking for questions specific to topics that the execs already want to address as well as open questions. This creates a more responsive and interactive feel to the agenda… it’s a bit difficult to describe, but there’s a difference between:

```
MC: “And now our VP of Widgets, Jane.”
Jane: “Thanks Bob. I’m going to monologue for 15 minutes about the following things…. A) budget, B) strategy, and C) mission success.”
ZZZZZZZZZZZ…Zzzz…zzz.
```

```
MC: “And now our VP of Widgets, Jane.”
Jane: “Thanks Bob. {short intro}”
MC: “Jane, folks are asking if you could address the budget situation. Specifically…”
Jane: “Certainly. This fiscal year we’ve…”
```

- Resiliency
  - Have personnel immediately at hand that are attending the virtual event (as users will be) and able to provide real-time feedback.
  - Have a person who will take over from another computer (or even location).
  - Have redundant means of connecting devices (such as WIFI and a cell hotspot). We do this when at hosting in-person events where we are broadcasting as well (event centers like hotels).
  - Be prepared to throw up a slide stating ‘we are having technical difficulties so please hold’ or ‘the event will be rescheduled’ could be very handy.

From: Content Managers <CONTENT-MANAGERS-L@LISTSERV.GSA.GOV> On Behalf Of Larrimore, Laura
Sent: Wednesday, January 6, 2021 05:54
To: CONTENT-MANAGERS-L@LISTSERV.GSA.GOV
Subject: [CONTENT-MANAGERS-L] Best practices for virtual Townhalls/All hands meetings

I know others have been doing Townhalls during the pandemic – what's worked well for you in this totally remote format?

Our situation: Our outgoing executives want to do an all-employee Townhall next week – the first one since the pandemic. We normally hold these in a 300-person auditorium with multiple cameras, with a separate video stream broadcast from a control room for 1,000s of remote workers.

We have a couple things to think through and I could use your advice!
- How best to replicate the energy of a townhall in the virtual format so it doesn’t drag?
- Have you done events where executives patch in from their homes/offices? How to do optimize the visuals and audio?
- Have you done an event where you put 1-4 executives in the auditorium or large boardroom with appropriate protocols?
[No need to give *me* the public health reasons, please. This is a question I am likely to get from my executives, who have done some smaller online events in this format. I am a former EMT and public health school official. If there are COMMS reasons why this format doesn’t work, please share.]

- If all remote, do we need a moderator/MC to help transition between speakers to smooth that awkward time when cameras are switching between speakers?
- What are the best ways for employees to ask questions, but without it being chaos? [Normally, we ask questions to be sent to a mailbox in advance, and collect question cards during the event from in person participants, screen them and pass them up to the executives]
- We have the usual bandwidth concerns, but are there other tech issues I’m not thinking of?

Thank you all in advance for your advice,

~Laura

Content managers,

Join the U.S. Web Design System team on Thursday, January 21, at 2:30 p.m. ET for our first monthly call of 2021. It’s a new year, and as good a time as any to revisit the design principles that guide our work.

This month, we’ll discuss how we can use journey maps and service blueprints to understand how people really use our sites and services to do what they need to do. We hope you’ll leave the call with a fresh perspective on promoting continuity and starting with real user needs. This month’s call should be of particular interest to anyone interested in user experience, customer experience, and the design decision-making process.

Register at http://go.usa.gov/xAmsV to join us next Thursday.

And just a quick reminder to set a recurring calendar invite to join us every third Thursday of the month at 2:30 p.m. ET. There are a lot of exciting sessions to come, and you won’t want to miss a thing!

All,

We wanted to let you know that Easy to Read COVID-19 Safety resources are now available on the CDC website.

These resources are available thanks to the COVID-19 Accessible Materials and Culturally Relevant Messages for Individuals with Disabilities Project, led by Georgia Tech’s Center for Inclusive Design and Innovation (CIDI). This is a CDC Foundation-funded communications initiative to which CDC is an advisor. The project aims to deliver essential COVID-19 information in Braille, American Sign Language (ASL), simplified text, and other alternative formats to people with disabilities, their families, and caregivers. ASL (American Sign Language) videos continue to be available on the CDC YouTube channel and more are being produced in the coming weeks, so check back periodically.

If the hyperlinks get corrupted during transmission of this message, here they are:

- COVID-19 ASL videos: https://www.youtube.com/playlist?list=PLvrp9iOILTQatwnqm61jqFrsfUB4RKh6J
- CIDI: https://cidi.gatech.edu/covid
- Braille Resources: https://cidi.gatech.edu/covid/braille
- Request documents embossed in Braille: https://cidi.gatech.edu/covid/braille/request
- Other alternative formats (e.g., for people who access the Internet with screen readers or other assistive technology): https://cidi.gatech.edu/covid/accessible

Special Kudos to Jennifer Meunier and Sarah Anderson here at CDC for making this happen!

All,

We wanted to let you know that Easy to Read COVID-19 Safety resources are now available on the CDC website.

These resources are available thanks to the COVID-19 Accessible Materials and Culturally Relevant Messages for Individuals with Disabilities Project, led by Georgia Tech’s Center for Inclusive Design and Innovation (CIDI). This is a CDC Foundation-funded communications initiative to which CDC is an advisor. The project aims to deliver essential COVID-19 information in Braille, American Sign Language (ASL), simplified text, and other alternative formats to people with disabilities, their families, and caregivers. ASL (American Sign Language) videos continue to be available on the CDC YouTube channel and more are being produced in the coming weeks, so check back periodically.

If the hyperlinks get corrupted during transmission of this message, here they are:

- COVID-19 ASL videos: https://www.youtube.com/playlist?list=PLvrp9iOILTQatwnqm61jgFrslUB4RKh6J
- CIDI: https://cidi.gatech.edu/covid
- Braille Resources: https://cidi.gatech.edu/covid/braille
- Request documents embossed in Braille: https://cidi.gatech.edu/covid/braille/request
Other alternative formats (e.g., for people who access the Internet with screen readers or other assistive technology): [https://cidi.gatech.edu/covid/accessible](https://cidi.gatech.edu/covid/accessible)

Special Kudos to Jennifer Meunier and Sarah Anderson here at CDC for making this happen!

Greetings all,

Happy New Year because it seems like such a long time ago, I thought to look up somebody old - like Eric Meyer and CSS.

Guess he's still out there. It makes me feel better.

Here he talks about more than one page. For so many, a website seems to begin and end on the home page. But not for Eric Meyer.

Accordion Rows in CSS Grid

"Another aspect of the meyerweb redesign I'd like to explore is the way I'm using CSS Grid rows to give myself more layout flexibility."

I think it's more than a decade ago that Eric Meyer helped me see page layout. I guess it's time to refresh.

Happy January you all.

State of Hawaii, Dept. of Taxation, Information Technology Band A

PS I still use #633399 beccapurple.

Web colleagues,

Our agency has a large grantee program with several funding opportunities throughout the year. As part of our funding application process, we have posted sample forms as PDFs that are part of the application requirements. Anecdotally, we've heard from the program staff that our grantees use these to preview what information is needed to apply and for planning purposes with their board of directors. We are currently undergoing a web redesign, and we are focused on reducing the number of PDFs. The program's practice of providing sample application documents generates a lot of PDFs several times per year. We are researching whether grantees need sample forms to successfully complete applications.
We're in the process of upgrading our agency's Drupal 7 site that reaches end-of-life status late this year. Have any of you recently upgraded (or are currently) and are willing to share your Request for Proposals you drafted or provide any feedback on essentials to address?

Thanks,

Nick Sabula
Public Affairs Specialist
National Council on Disability
Nick,

We recently published sample contract language for 21st Century IDEA to document requirements related to website modernization in contracts: https://designsystem.digital.gov/documentation/sample-contract-language/

GSA's Office of Government-wide Policy has also published some resources on how to buy accessible and include Section 508 requirements in the procurement lifecycle: https://section508.gov/buy

Specifically, the Accessibility Requirements Tool (ART) Resources page contains downloadable pre-determined accessibility requirements and solicitation language for over 40 categories: https://section508.gov/buy/accessibility-requirements-tool

Yesterday, the W3C published the First Public Working Draft (FPWD) of WCAG 3.0. Please see the “WCAG 3 Introduction” at:  [www.w3.org/WAI/wcag3](http://www.w3.org/WAI/wcag3)

As noted in the “Status: Draft for Review”, the “W3C Accessibility Guidelines (WCAG) 3.0 Working Draft is currently an **incomplete, unpolished Draft**“ (emphasis as in the original). It will be **a few years** before WCAG 3.0 is finalized! Obviously, it will take even more time before WCAG 3.0 could have a direct impact on Section 508 regulation. That said, some of us live for this sort of thing, and you are still reading, you may be interested in some of the links which follow.

Web version of email notice:
[https://lists.w3.org/Archives/Public/public-wai-announce/2021JanMar/0002.html](http://https://lists.w3.org/Archives/Public/public-wai-announce/2021JanMar/0002.html)

WCAG 3 FPWD Published news posting:

Here are some overviews by participants (shorter to longer):
- [www.deque.com/blog/first-public-working-draft-wcag-3](http://www.deque.com/blog/first-public-working-draft-wcag-3)
- [https://jspellman-77432.medium.com/an-insider-look-at-wcag-3-0-276e9b964a33](https://jspellman-77432.medium.com/an-insider-look-at-wcag-3-0-276e9b964a33)

My apologies to the people who have been double/triple posted on this email. I was not careful enough with the addies I used. So here is a bonus paragraph from the [Access Board blog post](https://www.access-board.gov/blog/):

Since the late 1990s, the Board and the WCAG working groups have engaged in ongoing collaboration to make web content more accessible to users with disabilities. The Board’s original Section 508 Standards (2000) cited WCAG 1.0 and included a mapping between specific WCAG 1.0 checkpoints and 508 provisions. The refreshed 508 Standards (2017) incorporate significant portions of WCAG 2.0 by reference.

Subject: [covid19-google-search-group-external] Update from Google: YouTube Video on SEO for Governments and Authority Entities
To: COVID19 Google Search Group <covid19-google-search-group-external@googlegroups.com>

Hi all,

We hope you’re doing well and staying safe during this unprecedented time.

We’re excited to share that Daniel Waisberg, Search Advocate at Google, has published a YouTube video on SEO for Governments and Authority entities. The video discusses how you can optimize your site appearance on Google Search, how to make sure Google can find and index your pages, and how to analyze queries that you do and don’t rank for.

Please don’t hesitate to send Google Search specific questions to this forum, we’re here to help. We also encourage you to continue to use this forum to share any learnings you have had with the rest of this group.

Happy New Year!

Google Search Central team

Hi everyone –

I would like to call upon the wisdom of this community to validate some online research I’ve been doing about the future of anchor links/jump links.

It appears that although browsers continue to support the NAME attribute, certain technologies are starting to toss the use of the NAME tag when used in anchor links. When we updated our Salesforce instance to the so-called “Lightning Experience” our anchor links started to fail in all of our knowledge articles for our end users. Authors with the role to publish articles can still use them successfully, but what worked in Salesforce Classic for anchors no longer works in the Lightening Experience version.

For example, here is a note from Mozilla: NAME - Obsolete since HTML5 - Was required to define a possible target location in a page. In HTML 4.01, id and name could both be used on <a>, as long as they had identical values.

W3.org says: The id attribute assigns a unique identifier to an element (which may be verified by an SGML parser). The id attribute has several roles in HTML:
- As a style sheet selector.
- As a target anchor for hypertext links.

There are also some rules about the id (and NAME) token -- ID and NAME tokens must begin with a letter ([A-Za-z]) and may be followed by any number of letters, digits ([0-9]), hyphens ("-"), underscores ("_"), colons (":"), and periods (".").

According to this Stack Exchange message board, it appears that my terminology may be out of date – they referenced [fragment identifiers] as the term of art for what I tend to call [anchor links] or [jump links] and their examples nest things in <section></section> tags. Is this the new way of doing things? What are folks doing about the depreciation of anchor links and should we be thinking/talking about them as fragment identifiers and nesting in section tags versus

Whatever Salesforce did to the platform, however, they did not update their rich text editor, so it still styles anchor links like this, which still includes NAME – and these are failing to work right:

```html
<a href="#comments"></a>

...<a id="comments" name="comments"></a>
```

Another question – is there flexibility on nesting the anchor part so it is still valid code? For the <a href> part, is there any downside to putting the anchor in the document link this <a id="comments" name="comments"></a> instead of this <a id="comments"
name="comments">comments here</a>? Is that just a personal preference or will HTML play tricks with me if I don’t nest it?

Thanks in advance for any help from the community in unraveling this – Our support desk has been swamped and (surprise, surprise) content is not getting priority action. Since anchors are used across our KB, I need to get a handle on this one.

kme

Hey everyone,

What are some companies that offer real time Spanish translation services that work well? Ideally they would work well with consumer-focused health information including pdf translation, and video captioning. We have been using Motion Point for a few years, but it’s contract time, so I’m interested in hearing about other options, if you know of any.

Thanks,

Ann

Greetings,

The next IT Accessibility Community Meeting will be held virtually on Tuesday, February 9th, 2021. Our theme, *“Moving Forward: Leaving No One Behind,”* continues to focus on reconnecting our broader accessibility community and looking at the path ahead. Topics that we’ll discuss during the meeting include:
Hi Content Managers!

The coronavirus and election season dominated not just news headlines but USA.gov's top 20 pages for 2020 as well. In our most recent pair of USAGov Blog posts, find out which top pages users visited in English, and compare the differences with our Spanish top 20 list from USAGov en Español.

We're always discovering new ways to use data and technology to connect people with their government. We'd love for you to learn along with us, and subscribe to the blog.

Thanks,

Nancy

Hello, Web Content Managers,

Does anyone know how to get the official photo for President Joe Biden?

Federal agencies have the presiding President’s photo posted in the lobbies and offices. With each Administration it is different on how we get the official photo. I have completed the “Contact Us” form on the WH.gov website with no response to date. I am pretty sure the official photo is on the list of things to do for the Administration.

Thank you!

Good evening, everyone.

We’re facing a challenge with trying to do effective, functional accessibility remediation on PDFs of public-distribution Inspector General reports that have been redacted for privacy etc.

The end result is a PDF with weird issues on pages that have been redacted, like bad font substitutions and random font size changes.

Has anyone else run into this?

How did you handle it?

Did a product like Common Look help?

Thank you!

- Ruth

Hello Jennifer and colleagues:

The Government Publishing Office (GPO) will print and distribute the photos when ready.

For now, this is the information I am sharing and you can pass on to those at your agencies:

GPO is standing by to reproduce copies of the President and the Vice President's photos for official use in Federal facilities, and will do so as soon as the official photo files are provided to us. I do not have a timeline on when GPO will receive those files from The White House.

Feel free to email me individually with any other questions. I will let the group know more information, as I receive it.

Hope this helps!

Gary

Hello, Web Content Managers,

Does anyone know how to get the official photo for President Joe Biden?

Federal agencies have the presiding President's photo posted in the lobbies and offices. With each Administration it is different on how we get the official photo. I have completed the “Contact Us” form on the WH.gov website with no response to date. I am pretty sure the official photo is on the list of things to do for the Administration.

Thank you!

Web managers community,

The Federal Web Council, an interagency group of digital and web directors, collaborates across agencies to improve federal digital services. We’ve heard from several of you that you’d like to hear more about what the Federal Web Council is working on, so we’re sending out occasional Council updates.

The Council last met on Thursday, January 28, 2020. Below are highlights from the meeting.

Cross-agency customer journeys
Rebuilding trust the American people have in our government will require transforming public service delivery. This must include building a deep understanding of how individuals experience service journeys from their perspective, rather than our bureaucratic one.

To begin to build further understanding of the individuals we serve, OMB’s federal customer experience (CX) team collaborated with civil servants representing more than a dozen agencies to develop three customer journey maps.

Read the federal CX blog and view CX projects on performance.gov/cx to learn more about this work.

U.S. Web Design System updates
The U.S. Web Design System’s January monthly call was on journey maps and service blueprints. Watch the video to learn more about the federal cross-agency customer journeys and case studies from other teams.

Web managers huddle
The next Web Managers Community Huddle will be held on Friday, February 5, at 2:30 p.m. ET. The topic for this huddle will be journey mapping and service blueprints — two methods you can use to start with real user needs, the U.S. Web Design’s first design principle.

I sent an invitation for the huddle to the listserv last week. Please accept the calendar invite from me to attend.

Ammie’s note – and especially her, “Rebuilding trust the American people have in our government will require transforming public service delivery. This must include building a deep understanding of how individuals experience service journeys from their perspective, rather than our bureaucratic one” reminded me of a recent government experience that I was already writing-up for another purpose. So, story time!

Sighted in the real world: Digital Transformation

I was applying for my daughter’s passport the other day, when I was reminded of a long-baking thought that we all know, but don’t always see examples of -- that digital transformation goes a bit deeper than a re-skin.

A few years back, I went through the same passport-seeking mission for my son. The passport office's site was pretty enough (It used the government's then-newish common design system); but we could barely figure out what sort of passport to apply for, much less actually apply for it. The site’s text was something other than crystal clear. Soon after, the site went through a redesign and rewrite (fortunately for me, as we came to realize that I would have applied for the wrong passport, if I hadn’t put plans on hold until the redesign was complete). Excellent accidental timing!

Still, there were tasks: pay the fee, gather documentation & references (to affirm that my son’s photo was actually of him), complete a not-quite-PDF-friendly form. It wasn’t fun, but the application got in the mail.

Eventually, we wound up with a fresh passport for my son and all of our materials returned.

This time (back to my daughter’s turn), the process has been much easier. Forms are of the all-online fill-in variety. They have an online photo evaluating tool, to check that an applicant’s portrait (in our case, a phone-cam pic) is suitable for a passport. Conveniently, the tool has no problem with me testing image after image until getting it just right. The system took my fee online, then directed me to not send any physical documents until our reference (a non-related person in a professional/trusted field) confirmed online that my daughter is, in fact, the person in her photo. At every step, email and texts prompted me to my next task. When her application arrived at the passport office, a text and email confirmed receipt (I still haven’t seen the Post Office’s confirmation). Yesterday, a text arrived, announcing that her passport was approved. This morning, another text provided tracking info for its delivery.

This is digital transformation. The process hasn’t just become prettier. It works better. And not just the site, but the underlying process. In just a few years, it has been redesigned twice, each time with the sort of improvements that digital designers outside of government would prescribe.

In fairness, the design system it was built with is actually pretty cool. The passport office site is reasonably clean, works on a phone, and is as simple as even I can ask. But the design system alone didn’t make the website work as well it does. A ton of behind-the-scenes effort transformed a legacy process into something the passport folks can be proud of.

I suppose this is my roundabout way of recommending that anyone who hasn’t checked out the UK’s Government Digital Service site, might just find some value there. I plan to borrow good ideas from wherever I find them, even from waaay across the pond. ‘:-)

Seeing that we aren’t getting the moving sidewalks and flying cars they promised us in grade school, I’ll take digitally advanced government processes for our future technology! Sounds like Passport process can act as a great model for others to follow. Still drives me nuts when you go to a site and they present you with a PDF you have to print and fill out by hand…..

Every file inventory, user-centered content edit, and plain language rewrite project is a step in the right direction! People have to access and understand information before they can use it, and the only way that can happen is if we're delivering digital services simply and clearly in the places and languages our audiences use.

What works best for your teams when breaking off "pieces of the elephant" and improving usability one chunk at a time? Is it better to focus on smaller projects first or larger cross-cutting ones? What content work offers the fastest or most rewarding ROI? How did you pull the right people together to focus your efforts?

Yesterday, a text arrived, announcing that her passport was approved. This morning, another text provided tracking info for its delivery.

This is digital transformation. The process hasn’t just become prettier. It works better. And not just the site, but the underlying process. In just a few years, it has been redesigned twice, each time with the sort of improvements that digital designers outside of government would prescribe.

In fairness, the design system < Caution-https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdesign-system.service.gov.uk%2F&data=04%7C01%7CLevyJM2%40state.gov%7Ce4069dff32ca47e1a43b08d8c863b270%7C66cf5C it was built with is actually pretty cool. The passport office site < Caution-https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fapply-renew-passport it is reasonably clean, works on a phone, and is as simple as even I can ask. But the design system alone didn’t make the website work as well it does. A ton of behind-the-scenes effort transformed a legacy process into something the passport folks can be proud of.

I suppose this is my roundabout way of recommending that anyone who hasn’t checked out the UK’s Government Digital Service site < Caution-https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Forganisations%2Fgovernment-digital-service it might just find some value there. I plan to borrow good ideas from wherever I find them, even from waaay across the pond. ‘-)
Web managers community,

The Federal Web Council < Caution-https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdigital.gov%2Fresources%2Ffederal-web-council%2F&data=04%7C01%7CLevyJM2%40state.gov%7Ce4069dff32ca47e1a43b08d8c863b270%7C66c an interagency group of digital and web directors, collaborates across agencies to improve federal digital services. We’ve heard from several of you that you’d like to hear more about what the Federal Web Council is working on, so we’re sending out occasional Council updates.

The Council last met on Thursday, January 28, 2020. Below are highlights from the meeting.

Cross-agency customer journeys

Rebuilding trust the American people have in our government will require transforming public service delivery. This must include building a deep understanding of how individuals experience service journeys from their perspective, rather than our bureaucratic one.

To begin to build further understanding of the individuals we serve, OMB’s federal customer experience (CX) team collaborated with civil servants representing more than a dozen agencies to develop three customer journey maps < Caution-https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcaution-www.performance.gov%2Fcx%2Fblog%2Fjourney-mapping%2F&data=04%7C01%7CLevyJM2%40state.gov%7Ce4069dff32ca47e1a43b08d8c863b270%7C66c

Read the federal CX blog and view CX projects on performance.gov/cx < Caution-https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcaution-www.performance.gov%2Fcx%2F&data=04%7C01%7CLevyJM2%40state.gov%7Ce4069dff32ca47e1a43b04a8d0c863b270%7C66c learn more about this work.

U.S. Web Design System updates
U.S. Web Design System updates

The U.S. Web Design System’s January monthly call was on journey maps and service blueprints. Watch the video <Caution-https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdigital.gov%2Fevent%2F2021%2F01%2F21%2Fuswds-monthly-call-journey-mapping-service-blueprints-jan-2021&data=04%7C01%7CLevyJM2%40state.gov%7Ce4069df32ca47e1a43b08d8c863b270%7C66cf54> learn more about the federal cross-agency customer journeys and case studies from other teams.

Web managers huddle

The next Web Managers Community Huddle will be held on Friday, February 5, at 2:30 p.m. ET. The topic for this huddle will be journey mapping and service blueprints — two methods you can use to start with real user needs <Caution-https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdesignsystem.digital.gov%2Fdesign-principles%2F%23start-with-real-user-needs&data=04%7C01%7CLevyJM2%40state.gov%7Ce4069df32ca47e1a43b08d8c863b270%7C66cf54> the U.S. Web Design’s first design principle.

I sent an invitation for the huddle to the listserv last week. Please accept the calendar invite from me to attend.

Hello Colleagues,

The DoD KM community has been working with OPM for a while on a new job series for Knowledge Management. At this point, OPM needs to get input from other agencies. They are particularly interested in hearing from:

- Commerce
- HUD
- Treasury
- EPA
- GSA
- Energy
- Interior
- VA
- FCC
- National Archives
- Smithsonian
- SBA
- SEC
- NSF
- OPM (yes – I find this a little funny ;)

If any of you can provide input, or know someone(s) in your organization who could, please reach out to @mail.mil (Army). She’s been the “hard charger” on this effort and needs your support!

Thanks,

That is pretty funny. I hope she finds the contacts she needs. Great idea sending the RFI through this channel. If all else fails, maybe LinkedIn profiles?

Stay well.

Strategic Communications Officer/HR Analyst
Good evening team of teams, I hope this email finds everyone well.

I have looked through the thread and didn’t find the answers. Forgive me in advance if I overlooked them.

My team is holding a pretty large WebEx meeting at the end of Feb. May you provide your suggestions on the following:
I am involved with this initiative also. OPM specifically is looking for Federal employees performing significant knowledge management work, or supervisors/HR professionals who have hired for such work, to provide input on required competencies, share position descriptions and performance elements, etc. There is good representation already from DOD, so OPM is especially interested in hearing from civilian Federal agencies. As stated in the original post, Cynthia Hilsinger cynthia.j.hilsinger.civ@mail.mil is the POC.

Turo Dexter
Convener, Federal KM Community

Knowledge management is the deliberate development, management, sharing, and application of intellectual assets and expertise, in conjunction with related information, to advance organizational goals.

That is pretty funny. I hope she finds the contacts she needs. Great idea sending the RFI through this channel. If all else fails, maybe LinkedIn profiles?

Stay well all.

Hi Everyone,

We have some issues with webpage performance and I am looking for Statement of Work (SOW) primarily for code and performance audit, then possibly SEO for options in the project. Does anyone have any SOW's, sample code/performance audit reports or related resources that they could share for website audit work for their websites (Drupal 8)?

Many thanks in advance!

I don't have an SOW for that but I have a suggestion: You can go to GSA's 18F and see if they can give you an estimate to do this work or if they can provide you with a SOW for this type of work. I used them to help me out with a complete website redesign estimate -- they know their stuff when it comes to Digital solutions. Just an idea...

Greetings,

The next IT Accessibility Community Meeting will be held virtually on Tuesday, February 9th, 2021. Our theme, “Moving Forward: Leaving No One Behind,” continues to focus on reconnecting our broader accessibility community and looking at the path ahead. Topics that we’ll discuss during the meeting include:

- **Evaluating ACR’s and VPATS** - Accessibility Conformance Report (ACR) creation, evaluation and validation processes can be challenging. Hear about solutions on how to evaluate ACRs developed from Voluntary Product Accessibility Templates (VPATS)

- **Get Certified** - Improving the accessibility profession through education and certification. Come hear from the International Association of Accessibility Professionals (IAAP) about certification programs that can bolster your credentials as an accessibility professional.

Event Details
WHEN: February 9, 2021; 9:30 am - 12:00 pm EST
WHERE: Virtual [See the link below]
WHO: Anyone involved in Section 508

REGISTRATION
To participate, please click on this registration link. Registration is now open and will close on Friday, February 5th!

*This meeting will be supported by Zoom for Government (Fedramp certified). Please feel free to attend via your personal device.

Dear Web Colleagues,

I hope this message finds you all well.

I wanted to share that the All of Us Research Program is continuing to look for smart and talented individuals to round out our Division of Communications and Marketing—this time in web. These are Web Content Specialist (GS-1035-12/13) positions. In particular, we are seeking to hire a web manager and a web strategist. We’re looking for individuals with experience managing content in Drupal (CMS), overseeing web development and project planning, maintaining web standards, understanding and reviewing for 508 compliance, administering governance, and directing day-to-day operations of major public websites. Strong project management skills are a must for all positions. Come and join our amazing team!

Please share these links with your networks and anyone you think would be a good fit.

Good morning,

During the “huddle,” Friday afternoon, a question came up about syncing info on multiple platforms (e.g., voice/telephone helpdesk and website). I mentioned AskUSDA (202-720-2791, askusda@usda.gov, and https://ask.usda.gov/s/ -- no clue about the extra “/s”). One of our colleagues wanted to know the service USDA uses to make it work and I promised to share the info here.

It’s Salesforce.

Thus concludes my huddle homework. Have an excellent and safe Monday. “Plus Ultra.”

Larry

Content Managers List <CONTENT-MANAGERS-L@LISTSERV.GSA.GOV>, Rachel Flagg - M1ED <rachel.flag@GSA.GOV>
Date: Mon, 8 Feb 2021 09:17:12 -0800
Content-Type: multipart/alternative
Parts/Attachments: text/plain (2482 bytes), text/html (16 kB)

Hi, Web Managers,
I’m forwarding a notice from the team at regulations.gov. They are moving from beta to live next week and wanted to flag that, if you have any links on your site(s) to regulations.gov, you may need to update them on 2/18 to reflect their new link structure. For assistance, contact the team (their contact info is at the end of this message).

GSA is planning to make Beta.regulations.gov the new Regulations.gov on February 18, 2021. To minimize the impact of broken links, please review any links you have to regulations.gov to determine if you’ll need to make any updates once we go live. All current regulations.gov URLs to docket and document details pages will continue to work, but we will not provide automated redirects for older URL structures that include “#!”, such as https://www.regulations.gov/#!

Links such as https://www.regulations.gov/#!aboutus will change to https://www.regulations.gov/about.

Please look for old links: https://www.regulations.gov/#!docketDetail;D=[docketID] and replace with the new link structure: https://www.regulations.gov/docket/[docketID] on February 18.

Questions? Please contact the helpdesk at regulations@erulemakinghelpdesk.com for technical support and erulemaking@gsa.gov for all other questions. Stay tuned for the public announcement from GSA.

Thanks!
-Rachel

Hello Tim,

Hoping this finds you well, I'm wondering if there's any updated news regarding the DAP team's examination/evaluation of Google Analytics 4. Any information you could share would be valuable and much appreciated. I believe the DAP team is likely to be the gold standard for Federal agencies in assessing this version of the tool, and we will all benefit from your assessment.

Best,

Subject: Re: [CONTENT-MANAGERS-L] Google Analytics 4

The DAP team has begun early stages of examination of GA4. From my novice understanding of it now, it is quite a significant change, complete with a different data schema. We're working to set up a GA4 property in parallel so that we can start examining features. Our GA vendor relayed that the current "GA3" or Universal Analytics properties aren't likely to be "decommissioned" anytime soon (through 2021). So, to William's question: I am not sure if there are "immediate" needs, but it may be beneficial to consider standing up a parallel GA4 property to get familiar.

As for other, more privacy-focused analytics tools: there are quite a few available, and the two I see most often are Matomo and Fathom. It appears on the surface that those tools do not yet have the capacity to scale to a system as large as DAP, with 4-5B hits per month. I’d love to know if any agencies are using them on individual sites, though. My hunch is that those tools aren't in much significant usage--please let us know if you do!

Tim

Alternatively, has anyone been working with any of the more privacy-oriented analytics solutions?

Over time, I’ve become more and more sensitive to the sort of data we’re providing to Google, merely for the privilege of using Google Analytics. You may know that I’ve had a hand in purging at least one major federal website of unnecessary tracking by social media companies – and if it weren’t for the DAP, I’d probably take a more serious look at purging GA from my current AO (There’s not much point in purging...
probably take a more serious look at purging GA from my current AO (there's not much point in purging GA from a site, if we're just going to provide Google with access to our users under the DAP umbrella).

Now, if you'll excuse me, I need to adjust my chapeau of tin lamé.

Subject: [CONTENT-MANAGERS-L] Google Analytics 4

Hello All,

Have any Google Analytics users made plans to upgrade to Google Analytics 4 (https://blog.google/products/marketingplatform/analytics/new_google_analytics/), or already done so? I’m trying to divine its particular value to public websites. I understand the aspect of Google targeting future support for GA4, and its potential supplemental benefit as the use of third-party cookies declines. I just wonder if there is an “immediate” case to be made for conversion/upgrade by government sites.

Thanks for any insight and perspective.

Hi all,

For those who leverage GovDelivery, I'm looking for a contact that has successfully implemented SOC services (especially log transfer) to your Security Operations Center. I'm trying to wrap up our Authority To Operate and that's the current blocker.

For those who waived the requirement, I would be interested in seeing your waiver if you care to share. 😊

Thanks!

If your agency has moved to Office 365, check with your CIO office to see if Microsoft Stream is available to you. I am currently exploring this option for OPM. It checks most of the boxes for 508 and ADA compliance. I checked with a contact of mine in DOJ Public Affairs who is responsible for coordinating external video and live streaming of press conferences and she said that there is no government mandate that requires an agency to use a live transcriptionist for captioning live streams. They are using EEG Falcon for Cloud Based caption embedding into the live stream, and they use EEG’s ‘Lexi’ cloud-hosted live auto captioning service. However, Microsoft Stream has automated captioning built-in, and transcriptions. And corrections post-production can be made directly within Microsoft Stream.

Cheers,
-Shawn

Mike - we are using Adobe Connect at NOAA as it has a captioning pod for live captioning. You can also record the stage with the captioning for posting later. It does have limits on participants but I wanted to share.

-Mike

Hi,

We have a Linux based server and are looking into increasing security of our website by including Web Application Firewall (WAF) and Malware Scanning Tools. I found an open source solution with ModSecurity, and a web based commercial solution called Securi. I am wondering if you have experience with either of these tools or if you have recommendations for something else?

Appreciate any insight.

Steve

CAUTION: This email has originated from an external entity. PLEASE CONSIDER THE SOURCE before responding, clicking on links, or opening attachments.

Hi All,

We’re in the process of updating our social media policy at the Selective Service System. If you’d be able to put me into contact with anyone from your social media department, or if you’d be willing to share your current social media policy, it would be greatly appreciated!

Best,

Caleigh Weichbrodt

Executive Summary

Fiscal Service policy encourages the official use of social media technologies and applications to enhance communication, collaboration, and information exchange in support of Fiscal Service’s mission and to foster the federal government’s goal of open, accessible government. Social media technologies may be used for internal bureau communication, communication with external agency customers, communication with public constituents and other stakeholders, for media relations, and education outreach purposes.

As is true for all program decisions within Fiscal Service, the decision to use social media technology must be made based on a solid business case and supported at the appropriate level within the organization or by Departmental offices, when applicable. Accordingly, this policy includes guidelines and procedures designed to assist Fiscal Service business areas in the implementation of social media initiatives.

Purpose

Fiscal Service recognizes the value in using appropriate social media technologies to enhance communication, collaboration, and information exchange in support of the bureau’s mission and the Federal Government’s emphasis on transparency and open government.

Scope

This policy covers all Fiscal Service employees, contractors, and fiscal and financial agents.

Cancellation

- Financial Management Service Social Media Policy
- Bureau of the Public Debt Social Media Policy

- Office of Special Counsel’s Frequently Asked Questions Regarding Social Media and the Hatch Act (April 4, 2012)
Responsibilities

Within Fiscal Service, roles and responsibilities with respect to the use of social media are as follows:

A. **Assistant Commissioner** – Ensure establishment of, and compliance with, guidelines and procedures for implementing social media policy within program or business area.

B. **Chief Counsel** – Provide legal guidance regarding the legal issues and risks associated with the implementation of social media tools (including, but not limited to, privacy and ethics issues), and obtain Departmental legal clearance when necessary.

C. **Legislative and Public Affairs (LPA)** – Provide guidance related to external public communication strategies and media relations and obtain Departmental Public Affairs clearance when necessary. Develop and maintain Fiscal Service policies regarding the use of social media. Provide guidance related to internal bureau communications. The LPA Social Media Program Manager is responsible for maintaining and managing the posted content to ensure integrity, clarity, consistency of tone and message, and transparency.

The primary administrator of the Fiscal Service social media sites, accounts, and applications will be a designated individual in LPA. The LPA Director will designate the primary Social Media Program Manager, and any other LPA member(s) to assist with administration of the social media site(s).

D. **Chief Information Security Officer, Information and Security Services (ISS)** – Provide guidance related to the privacy, records retention and information security requirements relevant to the use of social media, as well as general information technology consideration relevant to the use of social media.

Introduction

Fiscal Service will utilize social media technologies in an effort to promote and support open government, provide an additional medium to communicate to the public, and to conduct its business more effectively.

Social media includes Internet- and mobile-based websites, tools, and applications that integrate technology, social interaction, and user-generated content. Social media allows users to access, share, discuss, collaborate on and publish information.

Federal Government use of social media is growing rapidly and provides opportunities for federal agencies to share information and collaborate with their employees, constituents and stakeholders.
Guidelines for Social Media Content and Usage

Before implementing social media initiatives, Fiscal Service program areas should adhere to the following guidelines for using social media tools:

A. Program Area Guidelines

When considering how to use social media for official purposes, Fiscal Service staff should consider the following:

1. How does the use of social media support the Fiscal Service mission?

2. What are the anticipated benefits? How will the benefits be measured?

3. What are the anticipated costs of using social media? Do the anticipated benefits outweigh the anticipated costs, and if not, are there important non-monetary benefits to justify the costs?

4. What are the business, bureau reputation, security and legal risks associated with the use of social media and how are those risks mitigated?

5. Has the proposed use of social media been approved by appropriate levels of Fiscal Service management, and if necessary, by Departmental offices?

B. Posting Content

1. Employees will submit content that has been approved by a Division Director to Legislative and Public Affairs (LPA).

2. Generally, content that will be posted to the social media sites will be content that can be found on any of the Fiscal Service websites; however, any original content must be approved by the Social Media Program Manager. In addition, content that is posted to any social media site must adhere to all records management policies and procedures. LPA will coordinate with the Fiscal Service records management staff to ensure proper methods of capturing and retaining records of postings and content.

3. Because social media sites and accounts are, or provide access to, open forums for the exchange of ideas, content will not be deleted by the social media outlet (e.g., Facebook, Twitter) from its sites unless it is in violation of its terms of use agreement or other requirement. Violations include, but are not limited to, content that is hateful, threatening, or pornographic; incites violence; or contains nudity or graphic or gratuitous violence.

4. All posts must comply with copyright and fair use laws, and rules prohibiting or restricting the disclosure of privacy, personally identifiable information (PII), and non-public information.
5. All posts must protect privacy and Sensitive But Unclassified (SBU) information, such as protected acquisition and personally identifiable information (PII). Do not publish or report on conversations that are meant to be pre-decisional or internal to Fiscal Service unless given permission by a Division Director, or more senior bureau official.

C. Posting Comments on External Fiscal Service Social Media Accounts

1. Employees are prohibited from responding to any individual comment from a personal account while acting in an official capacity. If a comment warrants a direct response outside that particular forum, a representative from LPA will respond by email or official correspondence, in a manner that complies with all applicable laws, including privacy and record-keeping requirements.

2. LPA will not reply to comments made by the general public unless the reply would correct information or answer a question of a general nature, i.e., a question that might be covered as frequently asked questions. The Social Media Program Manager will determine whether a question or comment is appropriate for reply.

Procedures for Creation of New Social Media Accounts

A. Consultation

1. Business owners should consult other program areas within and outside the business owner’s Assistant Commissioner areas to mitigate any impact of the particular project on another area or obtain lessons learned from others who completed similar projects. The Office of Agency Outreach should be contacted when social media is directed at agency customers or when any new use of the Fiscal Service brand is proposed.

2. Business owners should consult LPA to ensure that any messaging, especially messages directed at the public, is consistent with Fiscal Service and Departmental policies; the appropriate communications tools are considered and selected; and any necessary Fiscal Service and Departmental clearance is obtained.

3. Business owners should, in coordination with LPA, consult the Information and Security Services (ISS) Chief Information Security Officer to ensure compliance with information security requirements and other information technology requirements.

   a. Fiscal Service recognizes the public’s concerns surrounding privacy and protection of personal information, to include PII, as it relates to social media technologies. Fiscal Service will protect personal information in accordance with all applicable requirements.

   b. When using electronic media or any type of electronic communications, the laws and regulations that govern the proper management of archival records and releases (e.g., The Federal Records Act and the Freedom of Information Act) still apply. Therefore, Fiscal Service will utilize the most appropriate methods to capture and retain records of postings and content.
c. Employees should follow the bureau’s privacy and records management policies and
guidelines, as well as any Treasury, Office of Management and Budget (OMB), and
National Archives and Records Administration (NARA) policies and guidelines on
privacy and records management. Contractors, fiscal agents, financial agents, and the
employees should be directed or instructed to comply with Fiscal Service policies related to
social media initiatives, as appropriate.

4. Business owners should consult with the Office of the Chief Counsel to ensure
     compliance with privacy and other requirements. Contractors, fiscal agents, financial
     agents, and employees should be directed or instructed to comply with Fiscal Service
     policies related to social media initiatives, as appropriate.

B. Making a Business Case For New Social Media Accounts

Information required to be included within a business case recommending the use of social
media includes, but is not limited, to:

1. The goals expected to be achieved by the project, and how the goals relate to the Fiscal
   Service mission;

2. The metrics that will measure performance and success;

3. The intended audience and proposed messaging (format and content);

4. The process for reviewing, approving, and updating social media content on an ongoing
   basis;

5. The accessibility of social media by individuals with disabilities;

6. The plan for monitoring public discussion of Fiscal Service programs or initiatives and a
   strategy to address misinformation;

7. A plan to apply records management and retention rules and protocol to social media;

8. Research, analysis, and other background information supporting the decision to use
   social media, including lessons learned from other similar projects within Fiscal Service;
   and

9. An analysis of the risks associated with the particular project and how risks will be
   mitigated, including information security, privacy, public relations, and legal risks. In
   assessing risks, business owners should consider: the extent to which the social media is
   for internal or external purposes; whether Fiscal Service or others have control and access
   to the information available through the social media account; and whether the
   information available through the social media account contains Sensitive But
   Unclassified (SBU) information. No SBU information may be posted or displayed on
   social media without the advance approval of the Assistant Commissioner, Office of the
   Chief Counsel, LPA, and ISS (along with the Deputy Commissioner or Department, as
   appropriate).
10. Only Treasury employees authorized by Departmental or bureau Public Affairs may establish a Treasury presence on public social media sites or post Treasury information to social media sites.

C. Approval Process

A bureau social media account or initiative must be approved by the appropriate Assistant Commissioner, the LPA Director, Office of the Chief Counsel, Chief Information Officer, Deputy Commissioner, and appropriate Departmental offices. Each Assistant Commissioner may also develop additional guidelines establishing controls within their business lines on the development of social media initiatives, which may be the same as other program approval processes if they are consistent with this policy.

Special Considerations Based on Target Audience

A. Internal Bureau Communication

Social media for internal communications within Fiscal Service will generally reside on the Fiscal Service intranet. Therefore, business owners need to consider how the social media application will impact Fiscal Service’s intranet infrastructure. Normal governance policies, procedures, and rules apply when designing and implementing social media applications for internal communications purposes. The ISS Assistant Commissioner and LPA Director are available for support and guidance.

In addition, all communications to Fiscal Service employees should be reviewed and approved at the Division Director, or more senior bureau official, level in order to ensure consistent internal communications.

B. Posting Comments on Internal Fiscal Service Social Media Accounts

When posting comments or other content on internal social media accounts such as blogs or wikis, employees must conduct themselves in a professional manner, respecting the opinions and ideas of others and ensuring their postings are business-related and meaningful to the topic. All comments and postings must adhere to Fiscal Service policies regarding employee conduct. If a comment or posting fails to meet these standards, LPA may remove it.

C. External Communications to Customers, Stakeholders, and the Public

It is extremely important that all uses of social media for external communications be approved at the Assistant Commissioner level. Clear and consistent communications from all Fiscal Service areas is crucial. Consultation with the ISS Assistant Commissioner area, Office of the Chief Counsel, and LPA is necessary to ensure that business owners have mitigated or eliminated any information technology or information security, privacy, public affairs, and legal risks to the bureau, and that all appropriate Fiscal Service management and Departmental approvals have been obtained. It is also recommended that uses of social media for communication with customer agencies be coordinated with the Fiscal Service Office of Agency Outreach.
D. Media Relations and Education Outreach

When social media is being used for education outreach purposes or is expected to generate any media interest, the business owner is required to first obtain Assistant Commissioner approval and then obtain LPA approval. LPA is available to provide informal guidance for any business owner prior to seeking Assistant Commissioner approval.

Social Media Personal Use

A. Ethics

Fiscal Service employees, like all other executive branch employees, are subject to certain standards of ethical conduct that apply at all times, including during duty hours and during non-work time. These standards also apply to employees’ personal use of social media. For more information, employees should refer to the Executive Branch Standards of Conduct, Office of Government Ethics Legal Advisory 15-03: the Standards of Conduct as Applies to Personal Social Media Use, Department of the Treasury’s Supplemental Standards of Ethical Conduct, and ethics information available on Alex.

B. Standards of Conduct

The purpose of this section of the policy is to outline basic standards of conduct as well as provide guidance on how standards of conduct apply to the use of social media technologies. The Office of Legislative and Public Affairs and the Office of Chief Counsel maintain additional resources, including social media quick tips and other materials focusing on the personal use of social media technologies that help explain the policy. In addition, employees can contact the office of the Chief Security Officer / Chief Privacy Officer to obtain guidance on the appropriate use of social media as well as information that can be transmitted or stored on social media sites.

Employees are expected to adhere to the following standards of conduct in their personal use of social media:

1. The Standards of Ethical Conduct for Employees of the Executive Branch, 5 CFR Part 2635, prohibit employees from using their government position or title or any authority associated with their public office in a manner that could be construed to imply that their agency or the government sanctions or endorses their personal activities.

2. The Department of the Treasury Employee Rules of Conduct, 31 CFR Part 0, prohibits employees from engaging in criminal, infamous, dishonest, or notoriously disgraceful conduct or any other conduct prejudicial to the Government.

C. General Guidelines for Personal Use of Social Media

If an employee is identified as a Fiscal Service or Treasury employee while engaging in activities involving social media applications, he or she should take care to:
1. Ensure his or her title or position is given no more prominence than other significant biographical details (Note: In some instances, due to security concerns, an employee may be asked to not display title or position information.);

2. Ensure that no information is given that could compromise Fiscal Service physical, personnel, or cybersecurity;

3. Refrain from posting content about specific work projects, internal processes, and bureau systems;

4. Refrain from displaying an official seal or other official image or making any statement that might suggest that the employee is acting in his or her official capacity;

5. Make clear that any views he/she expresses pertaining to Treasury matters do not necessarily represent the views of Treasury or any other federal agency or the United States Government;

6. Ensure that content does not raise questions about the employee’s ability to perform his or her official duties in a professional and impartial manner free from any conflict of interest;

7. Refrain from personally soliciting gifts or fundraising, including accepting donations on behalf of non-profit organizations, from prohibited sources or subordinates;

8. Ensure that non-public information is not disclosed; and

9. Refrain from using his or her official authority or influence for the purpose of interfering with or affecting an election; or knowingly soliciting a political contribution from any person; or knowingly soliciting or discouraging the participation in any political activity of any person who has a matter pending with the bureau.

**Risks**

Employees must adhere to the restrictions in Treasury Directive (TD) 87-04, *Personal Use of Government Information Technology Resources*, when using government information technology (IT) resources to engage in personal social media activities. TD 87-04 allows Treasury employees limited personal use of government IT resources during non-work time, provided that such limited use does not interfere with the agency’s mission or operations, adversely affect the performance of official duties, or involve more than minimal additional expense to the government and does not overburden any of the government’s IT resources. Certain uses, however, are prohibited, and employees should have no expectation of privacy when using government IT resources at any time.

Since social media communication can easily enter the public domain, officials in leadership or management positions should exercise additional caution when using social media. If an official engages in personal use of social media, there is a risk that the communications could be disseminated and misinterpreted as expressing official positions.
Employees should be aware of vulnerabilities inherent in the use of social media, including common threats such as phishing and spear phishing, social engineering, and web application attacks. In addition to complying with bureau IT security standards and controls, employees are responsible for taking reasonable steps to mitigate these risks when using bureau equipment.

Additional Guidance

These guidelines are not intended to be all-inclusive. Employees should exercise good judgment and seek additional guidance if necessary.

Steve,

We use mod_security with www.uspto.gov and we're generally happy with it. There is a round (likely several rounds) of tuning to remove the false positives depending on what your traffic looks like and what your web content expects or accepts. The community is pretty active and they seem to keep making improvements. Note that there is a standard set of rules that comes with mod_security, by itself, it's a powerful engine for web traffic analysis, the rules are key to shaping the traffic you want to allow through.

-David

Hi,

We have a Linux based server and are looking into increasing security of our website by including Web Application Firewall (WAF) and Malware Scanning Tools. I found an open source solution with ModSecurity, and a web based commercial solution called Securi. I am wondering if you have experience with either of these tools or if you have recommendations for something else?

Appreciate any insight.
Steve

Good point David - tuning takes time. Any tool will require several rounds of tuning. The State of Iowa uses Akamai.

We have three different social media policies:

1) Social Media Policy for the public is published on our website - [https://www.iowa.gov/policies#social](https://www.iowa.gov/policies#social)
2) State security standard for agency use of social media - [https://ocio.iowa.gov/social-networking-security-standard](https://ocio.iowa.gov/social-networking-security-standard)
3) State employee policy on use of social media - See page 40 [https://das.iowa.gov/sites/default/files/hr/documents/SOI_EE_Handbook.pdf](https://das.iowa.gov/sites/default/files/hr/documents/SOI_EE_Handbook.pdf)

Another great resource on social media policies is [https://www.governmentsocialmedia.com/](https://www.governmentsocialmedia.com/) They have some free resources if you register and if you become a member there is even better information. I have attended their conference several times and find this to be an extremely valuable resource.

Web managers,

According to a [2018 McKinsey survey](https://www.mckinsey.com/industries/technology-media-and-telecommunications/our-insights/the-global-case-for-customer-experience-in-government), reliability and simplicity are the top two drivers of customer experience in the United States and most other countries in their survey.

At last week’s huddle, we learned more about **journey mapping and service blueprints** — two methods you can use to [start with real user needs](https://www.federalgovernmentexperience.gov/) when building websites and digital services. Thank you, [Norah Maki](mailto:norah.maki@gsa.gov), for leading the discussion on this topic.

You can learn more about journey maps and governmentwide customer experience projects at [performance.gov/cx](https://performance.gov/cx).

For me, a key takeaway was the importance of using these methods to understand services through our customers’ eyes. Below are a few resources shared during the huddle:

- [Service Design 101: Frontstage vs. Backstage](https://www.nngroup.com/articles/service-design-101/) - Nielsen Norman Group
- [Design principles](https://www.whitehouse.gov/) - U.S. Web Design System
- [18F methods, a collection of tools to bring human-centered design into your project](https://18f.gov/) - 18F
- [2020 Amplify Program and customer experience resources](https://www.usgbc.org/) - Federal Customer Experience Initiative team (feds-only via Max.gov)

[Watch the recording](https://www.youtube.com/watch?v=dQw4w9WgXcQ) from the U.S. Web Design System’s January 2021 monthly call to learn more about how journey maps and service blueprints, including a deeper dive into the information Norah presented at the huddle.

Happy Valentine’s Day, and thank you for your service. You deserve a lot of #GovLove for all you do to deliver an exceptional experience for the public!

Mike - we are using Adobe Connect at NOAA as it has a captioning pod for live captioning. You can also record the stage with the captioning for posting later. It does have limits on participants but I wanted to share.

-Mike

Let’s keep in mind what “508 accessible live-streamed video” means. Is the video platform itself Section 508-conformant, as software? Can a blind/partially sighted person navigate all the functions of the (Zoom, WebEx, etc.) with a ScreenReader or screen magnifier? Can a person with dexterity impairments navigate all the functions of the (Zoom, WebEx, etc.) with Dragon NaturallySpeaking or other speech recognition software? Could a blind/partially sighted person have someone providing real-time audio-description (particularly if there are slides being shown)?

Captioning (professionally-generated Computer Assisted Real-Time Transcription/CART and NOT speech recognition/auto-generated cRaptioning ) is CRITICAL, no doubt. There’s just more to accessibility and to Section 508-conformance.

At the NIH, we tend to recommend and use the Federal Relay Service’s Relay Conference Captioning. While FRS RCC doesn’t integrate into Zoom, like it does with WebEx, and requires opening the StreamText website, but it’s still beneficial in other ways (the transcript can be retained or downloaded, it follows GSA’s security and privacy requirements for RCC, minimal lead time required to request the services (in English and in Spanish), and our agency already has a task order, so it’s financially covered at the Agency level.

For a one-to-one meeting, where the Deaf/hard-of-hearing person has the right of first refusal, Otter.ai (integrated into a web platform or placing your smartphone next to your laptop or in a separate browser window) and Google Meets’ `auto captioning’ is decent

We're using Blue Jeans Events, a service recently acquired by Verizon. It does a great job with live events when it comes to captioning, etc. We have had town halls up to 10000 employees. They are working on their embedding the captions into the recording.

More great stuff from Drupal4Gov!

2-hour Online TRAINING 😊

Drupal4Gov Webinar Series: 2-hour Configuration Management Training

Thursday, February 18, 2:30-4:30pm EST

This webinar will provide an overview to Drupal's Configuration Management System and the Config Split Module. Attendees are encouraged to have a laptop configured to work locally (a couple of options for this are Lando or DDEV). However, just following along is perfectly acceptable as well.

Our Instructor: John Picozzi

John’s an Account Manager at Oomph, Inc. with a background in technology. John helps clients navigate the entire project process – from kick off to launch, and beyond.

Previously the Senior Drupal Architect at Oomph, John has years of experience building and leading successful, cutting edge web projects. No matter the position John’s goals are the same: engaging the open source community through events, making new connections, cultivating new business opportunities, strengthening relationships, and crafting amazing solutions.

Register for Configuration Management
Miss a Webinar or Drupal GovCon Session?

No worries! We got you!

Just head over to DrupalTV to see all our videos captured by the Drupal Recording Initiative, our webinars and even Drupal GovCon the virtual edition. Can't get to Drupal.TV? No problem, you can also check out our YouTube page.

What’s Coming Up Next in Our Webinar Series?

How about Kubernetes in Government!?! We’ll be welcoming Salim Lakhani -- topics will include:

- Getting started with Kubernetes
- Tooling up for production - things to watch out for.
- Learning Curve - skills required for management, support, etc.
- Dev, Test, Live Environments - what’s involved
- Deployments - application and Kubernetes deployments
- Technical considerations - for scaling, logging, monitoring, etc.
- Cost Management - track and limit costs per site and per project
- Security, Support, and SLA - what’s expected and how to address it
- Contingency Planning - for loss of data center / access / Fail-over / Fallback

If time allows, the webinar will conclude by summarizing what the team was expecting going into the project, what they learned on their journey, and what advice they can confidently share with others to help them with their journey to Kubernetes.

Webinar tickets will be available February 18th.

Drupal Florida Camp Tickets Available Now!

Drupal Florida camp is virtual this year (aren't we all?). Drupal Florida Camp is one of the
oldest Drupal events in North America and we at Drupal4Gov know that this is going to be an amazing event starting THURSDAY - yeah, TOMORROW!

Tickets are only $20 and it helps Drupal Florida camp provide the technology needed to make the event possible. Don’t miss out on the training, summits and sessions of Florida Drupal Camp.

And Don’t Miss Upcoming Drupal Camps!

As we make it through the pandemic, Drupal camps and DrupalCon have moved online -- including these upcoming events!

NERD Summit: March 19-21

MidCamp: March 24-27

DrupalCon: April 12-16

Hello all,
I am hoping that the group can assist me. We’re interested in the average cost that was spent on obtaining an outsourced expert to upgrade your sites from Drupal 7 to Drupal 9. We are interested in upgrading our sites but would like to have a better understanding of the cost as well as length of time to complete. We have a knowledgeable Drupal system administrator but due to heavy work load we need a consultant/contractor to assist and/or lead. Any information you can share would be greatly appreciated.
Thank you,
Kathy

Join us tomorrow, Tuesday, February 23, at 2:30 p.m. ET to learn about chatbots and hear from a cross-agency panel about how they have used chatbots and other virtual assistants to improve customer experience.

We'll kick off the event with a demo of a few agency virtual assistants, followed by a panel discussion and Q&A. We plan to have examples from Federal Student Aid, TSA, and USA.gov, plus discuss some of the challenges and approaches to building them.

🎉 Register to join us tomorrow @ 2:30 p.m. ET.

Hello all,

My team is looking for a digital producer (web + social) to support our digital marketing and outreach efforts for the National Flood Insurance Program (NFIP) at FEMA. The NFIP is the nation's largest single-line insurance program, providing nearly $1.3 trillion in coverage against flood. It operates as a public-private partnership between the government and about 60 insurance companies and NFIP Direct, which sell and service the policies.

The Federal Web Council, an interagency group of digital and web directors, collaborates across agencies to improve federal digital services. We’ve heard from several of you that you’d like to hear more about what the Federal Web Council is working on, so we’re sending out occasional Council updates.

The Council last met on Thursday, February 18, 2021. Below are highlights from the meeting.

Presidential transition retrospective
The Council reflected on what went well and what could have gone better for the 2021 presidential transition and identified potential actions for the next transition.

What went well for you, what challenges did you encounter, and how can GSA support you? Email Rachel Flagg, Federal Web Council co-chair, to let her know your thoughts and experiences.

U.S. Web Design System updates
The U.S. Web Design System team shared their updated product roadmap with the Council. Watch a video from the design system’s February monthly call to learn more about what’s next for the design system — what we’re planning to do this year, and why.

Web managers huddle
We will hold another Web Managers Community Huddle on Thursday, March 4, at 2:00 p.m. ET. Tim Lowden, Digital Analytics Program (DAP) program manager, will join us to talk about data and analytics. I will be sending a calendar invitation for the huddle to the listserv soon. Be on the lookout for the invite and, in the meantime, pencil it in!
