RE: Goodfellow Federal Center - Metals in Air Investigation  
Building – #106  
4300 Goodfellow Boulevard  
St. Louis, Missouri 63120  
OCCU-TEC Project No. 919103

Dear Ms. Czarnecki:

Thank you for the opportunity to assist the General Services Administration (GSA) with the Resource Conservation and Recovery Act (RCRA) metals air sampling investigation of the above referenced buildings located at the Goodfellow Federal Center, in St. Louis, Missouri. OCCU-TEC understands that the purpose of the investigation was to provide sampling data regarding pre-existing conditions noted in investigation reports previously prepared for the facility. The following report summarizes the sample collection activities and the laboratory analytical results of the samples submitted.

On December 3rd, 2019, Missouri licensed air sampling professionals from OCCU-TEC conducted air sampling for the presence of six (6) of the RCRA metals including Silver, Arsenic, Barium, Cadmium, Lead, and Selenium. Sampling was conducted on Building #106.

The proposed sampling scheme, the numbers of samples, sample distribution and general methodology was developed based on previous investigation methodology and in coordination with the GSA. Sample locations were determined by OCCU-TEC field personnel while on-site.
**Resource Conservation and Recovery Act Metals Air Sampling**

Air sampling for RCRA metals was collected on 37-millimeter (mm) cassettes with 0.8 micrometer (µm) mixed cellulose ester (MCE) filters using powered air sampling pumps in accordance with National Institute for Occupational Safety and Health (NIOSH) sampling methods. Samples were collected in a method sufficient to collect a minimum sample volume of 300 liters. Air samples were submitted under chain-of-custody to Scientific Analytical Institute, Inc. (SAI) for independent analysis of RCRA metals in accordance with NIOSH Method 7300. SAI is accredited by the American Industrial Hygiene Association (AIHA) utilizing the Industrial Hygiene Proficiency Analytical Testing (IHPAT) program. SAI’s IHPAT Laboratory ID is 173190.

Results of the air sampling are summarized in the table below by identifying the range of results for Building #106 for each of the seven metals that were sampled. **Samples with a “<” sign indicate that the results were below the laboratory’s method reporting limit.**

<table>
<thead>
<tr>
<th>Analysis</th>
<th>Lowest Concentration (µg/m³)</th>
<th>Highest Concentration (µg/m³)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Silver (Ag)</td>
<td>&lt;0.37</td>
<td>&lt;0.37</td>
</tr>
<tr>
<td>Arsenic (As)</td>
<td>&lt;0.71</td>
<td>&lt;0.71</td>
</tr>
<tr>
<td>Barium (Ba)</td>
<td>&lt;0.071</td>
<td>&lt;0.071</td>
</tr>
<tr>
<td>Cadmium (Cd)</td>
<td>&lt;0.071</td>
<td>&lt;0.071</td>
</tr>
<tr>
<td>Lead (Pb)</td>
<td>&lt;0.37</td>
<td>&lt;0.37</td>
</tr>
<tr>
<td>Selenium (Se)</td>
<td>&lt;0.71</td>
<td>&lt;0.71</td>
</tr>
</tbody>
</table>

Results of the air samples collected indicate that the air samples collected from Building #106 contained concentrations of RCRA metals below the laboratory’s method reporting limit and the OSHA Permissible Exposure Limit (PEL). Sample location diagrams are attached is Appendix A. Sample locations and the corresponding results are summarized in the laboratory analytical results that are included in Appendix B. The air sampling professional’s Missouri Lead license is included in Appendix C.

It should be noted that this air sampling investigation was only a screening of airborne RCRA metals and should not be interpreted or used to determine compliance or non-compliance with OSHA personnel monitoring regulations.
OCCU-TEC appreciates the opportunity to work with GSA on this project. If you have any questions concerning this report, or if we may be of any additional service, please feel free to contact us.

Sincerely,

Justin Arnold, CIEC Project Manager

Jeff Smith Senior Project Manager (QA/QC)
