**AAAP Overview**

AAAP expedites the lease procurement process by allowing lessors to submit final proposals for available office space that meets GSA’s minimum requirements to a central database. When GSA identifies an agency’s space need, the GSA leasing team:

1. Posts a project-specific advertisement for the agency’s requirements and performs outreach so lessors have an opportunity to submit or refine proposals in the database.
2. Runs the agency’s requirements against the final proposals in the AAAP database to return a set of applicable spaces.
3. Calculates the cost of each offer using a present value analysis, ranks them by present value from lowest to highest, and begins due diligence activities with the lowest priced proposal.

GSA’s due diligence of the lowest-priced space includes:

- Verifying it meets GSA’s minimum requirements.
- Verifying it meets the agency’s go/no-go criteria.
- Scheduling a building tour with the agency to assess technical acceptability.
- Receiving additional submittals required under the Request for Lease Proposals package.

This careful examination of interested offerors further reduces the leasing process time. Since the AAAP process automatically returns only those properties capable of meeting necessary requirements, there is no need for a market survey. Instead, building tours are limited to only qualified properties (ideally only the lowest-cost option).

If the lowest-priced proposal is unable to meet GSA’s requirements or an agency’s specific needs, it is disqualified and the leasing team will look at the next lowest-priced proposal. Once a space proposal meets all necessary criteria, the lease award process begins. After lease award, the process is the same as other procurement methods.
Project Types

Currently, AAAP can be used for new and continuing office space leases greater than 500 ANSI/BOMA Office Area (ABOA) square feet.

The system has accommodated specialized spaces, including: high-capacity floor loads; sensitive compartmented information facilities (SCIFs); weapons storage; and sally ports.

Tenant Improvement Costs

Tenant improvement costs are amortized into the rent over the first 8 years of the lease.

The market is made aware of the tenant improvement allowance through a project specific advertisement.

Based on the requirements, AAAP can use a different tenant improvement allowance for an incumbent lessor. Move and replication cost are also taken into consideration, if applicable.
