MEMORANDUM TO ASSISTANT REGIONAL ADMINISTRATORS, PBS
REGIONAL REALTY SERVICES OFFICERS

THRU: ANTHONY COSTA
DEPUTY COMMISSIONER, PBS - PD

FROM: CRISTOPHER REUTERSHAN
INTERIM ASSISTANT COMMISSIONER FOR OFFICE OF
NATIONAL CUSTOMER SERVICES MANAGEMENT - PQ
GLEN S. (SAM) HUNTER, JR.
ASSISTANT COMMISSIONER
OFFICE OF APPLIED SCIENCE - PL

SUBJECT: Fire Protection, Life Safety, and Environmental Procedures in
Lease Acquisition

1. Purpose. This Realty Services Letter (RSL) issues updated fire protection, life
safety and environmental procedures for lease acquisitions including technical
corrections to the September 30, 2003 RSL on the same subject. These changes
should increase the assurance of safety in leased space, but not result in additional
workload for Realty Specialists. The changes are intended to assist Realty
Specialists with their understanding and implementation of Fire Protection and Life
Safety Requirements.

2. Background.

a. In 1996 a task group of Realty Specialists and Fire Protection and Environmental
Engineers met to address fire safety and environmental requirements for leases.
The group recommended simplified fire protection, life safety, and environmental
procedures that rely on local codes and national standards rather than detailed
specifications. The procedures were issued as PER-96-04, Safety and
Environmental Procedures in Lease Acquisition, dated October 30, 1996. Over
the next several years, similar discussions occurred between Realty Specialists
and Fire Protection Engineers regarding the effectiveness of the 1996 RSL.
These discussions culminated in an amendment to the procedures by RSL PE-
2003-06, Fire Protection, Life Safety, and Environmental Procedures in Lease
b. Following the issuance of RSL PE-2003-06, a fatal fire occurred in an unsprinklered downtown high-rise office building in Chicago. GSA did not lease space in the building; however, our standards would have allowed a lease, because the building met minimum local code requirements and the Fire Safety Act of 1992. In order to reduce GSA's potential fire risk in space leased in high-rise office buildings, the Fire Protection Engineers recommended additional technical modifications to our standards to address this potential fire safety risk. This RSL implements that recommendation by establishing additional requirements for when space is leased on or above the 6th floor in high-rise office buildings. This new language is similar to the language utilized prior to the issuance of PER-96-04.

c. Primary changes in procedures from PE-2003-06 are—

(i) Requires the installation of an automatic sprinkler system in all buildings where the Federal Government leases some portion of space on or above the 6th floor, regardless of the amount of space leased in the building. Sprinklers shall be installed up to and including the highest floor of Government occupancy, except in instances where the total amount of space to be leased in a building totals 35,000 square feet or more. In such instances, the requirement for the entire building to be sprinklered, as stated under the previous RSL, still applies.

(ii) Clarifies language within the Fire Protection and Life Safety paragraphs of the SFO.

(iii) Clarifies language within the GSA Form 3626, U.S. Government Lease for Real Property (Short Form).

(iv) Clarifies both versions of the Prelease Fire Protection & Life Safety Evaluation (High-Rise and Low-Rise) forms, regarding their applicability and the information to be surveyed.

(v) Assigns official GSA form numbers to the prelease forms.

3. Effective Date/Expiration Date. These instructions and form changes are effective immediately for all new SFOs prepared on or after the date of issuance, and will expire 12 months from the date of issuance, unless extended or canceled. Specialists shall apply these instructions for ongoing acquisitions as appropriate.

5. Applicability. All real property leasing activities.

6. Instructions/Procedures. Detailed guidance is included as Attachment 1. The following is a summary of attachments:

b. Attachment 2 – GSA Form 3626, U.S. Government Lease for Real Property (Short Form).

Attachments

1. General Requirements.
   a. Realty Specialists shall consult as necessary with the appropriate regional safety specialists, fire protection engineers, and environmental engineers throughout the lease acquisition process.
   b. Realty Specialists shall assure in all leases (except temporary leases) that—
      i. A complete review of open conditions in the Inventory Reporting Information System (IRIS) database is performed and all conditions that do not meet the standards of this Realty Services Letter (RSL) are to be resolved prior to executing leases at the same location. Realty specialists can access the IRIS database at http://pbsportal.pbs.qsa.qov/IRIS_Safety/.
      ii. Offerors are aware of their responsibility to provide and maintain space that is free of hazardous materials according to applicable Federal, State, and local environmental regulations.
      iii. Offerors provide a copy of the valid certificate of occupancy issued by the local jurisdiction prior to occupancy. If the local jurisdiction does not issue a certificate of occupancy, the Offeror shall obtain the services of a licensed fire protection engineer to verify the offered space meets all applicable local codes and ordinances to ensure an acceptable level of safety is provided. Realty Specialists are encouraged to remind offerors of this requirement when sending out letters requesting “Final Proposal Revisions.”
      iv. Offerors complete the applicable Prelease Fire Protection & Life Safety Evaluation. Realty Specialists shall obtain a review of the submitted form by a GSA Fire Protection Engineer. The Offerors shall complete either:
         (a) Prelease Fire Protection & Life Safety Evaluation for a Low-Rise Building, or
         (b) Prelease Fire Protection & Life Safety Evaluation for a High-Rise Building.
      v. Offerors provide scaled drawing(s) of the entire floor or floors in which space is being offered in the building and of the floor level of exit discharge and that drawing(s) include the locations of all exit stairs, elevators, and the space(s) being offered to the Government. Realty Specialists shall obtain a review of the submitted drawings by a GSA Fire Protection Engineer.
      vi. Offered space provides unrestricted access to a minimum of two remote exits on each floor of Government occupancy.
      vii. Offered space meets or will be upgraded to meet prior to occupancy, the applicable egress requirements in the National Fire Protection Association (NFPA) 101, *Life Safety Code*, or an alternative approach or method for achieving a level of safety deemed equivalent and acceptable by the Government.
viii. Offered space meets or will be upgraded to meet prior to occupancy, the applicable fire alarm system and automatic fire sprinkler system requirements. See paragraphs 1.c.(i) and 1.c.(ii).

ix. Offered space located below-grade, including parking garage areas, and all hazardous areas within the entire building (including non-Government areas) are protected or will be protected prior to occupancy by automatic fire sprinkler systems or an equivalent level of safety.

tax. Scissor stairs are counted as only one approved exit.

xi. Open-air exterior fire escapes are not counted as an approved exit.

c. Where applicable, Realty Specialists shall obtain written confirmation from Offerors to assure that offered space meets or will be upgraded to meet prior to occupancy the applicable fire alarm system and automatic fire sprinkler system requirements described below –

i. **Fire alarm system requirements.**

   (a) A building-wide fire alarm system shall be installed when the Federal Government leases space, in one or more blocks, with some portion of the space located two or more stories in height above the lowest level of exit discharge (typically describes a building 3 stories or more in height). The fire alarm system shall meet the installation and operational requirements of the applicable local codes and ordinances (current as of date of the solicitation) adopted by the jurisdiction in which the offered space is located.

   (b) The fire alarm system shall be maintained in accordance with the requirements of the applicable local codes or NFPA 72, *National Fire Alarm Code*. The fire alarm system wiring and equipment shall be electrically-supervised and shall automatically notify the local fire department or approved central station. Emergency power shall be provided for the fire alarm system.

ii. **Automatic fire sprinkler requirements.**

   (a) When the Federal Government leases space in one or more blocks, with some portion of the space on or above the 6th floor, the building up to and including the highest floor of government occupancy shall be protected by an automatic fire sprinkler system or an equivalent level of safety. This requirement does not apply to lease extensions and to the exercise of renewal options when the initial lease was entered into before the applicability of this RSL.

   (b) The Fire Administration Authorization Act of 1992 (Federal Fire Safety Act) requires the following: when the Federal Government leases 35,000 square feet or more of space, in one or more blocks, with some portion of the space on or above the 6th floor, the entire building shall be protected by an automatic fire sprinkler system or an equivalent level of safety. The subject Act does not require the installation of an automatic fire sprinkler system or equivalent level of safety solely as a result of the leasing of additional space below the 6th floor. See paragraph 5, Equivalent Level of Safety Evaluation Procedures, if an Offeror proposes to satisfy this requirement by providing an equivalent level of safety. This requirement does not apply to lease extensions and to the exercise of renewal options when the initial lease was entered into before October 26, 1992.
2. Definitions.
   a. Hazardous areas means those areas in a building referred to as hazardous areas in NFPA 101, Life Safety Code, or any successor standard thereto. Examples include areas used for the storage of combustibles or flammables; toxic, noxious, or corrosive materials; or heat producing appliances, etc.
   b. Equivalent level of safety means an alternative design or system (which may include automatic fire sprinkler systems), based upon fire protection engineering analysis, which achieves a level of safety equal to or greater than that provided by automatic fire sprinkler systems. (See 41 CFR 102-80 for guidance on conducting an equivalent level of safety analysis.)
   c. Automatic fire sprinkler system means an electronically supervised, integrated system of underground and overhead piping, designed in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems. The system is usually activated by heat from a fire and discharges water over the fire area. The system includes an adequate water supply.
   d. High-Rise building means a building greater than 75 feet in height where the building height is measured from the lowest level of fire department vehicle access to the floor of the highest occupied floor. A building that is 6 stories or more in height is typically considered a high-rise building.
   e. Low-Rise building means a building less than 75 feet in height where the building height is measured from the lowest level of fire department vehicle access to the floor of the highest occupied floor. A building that is 5 stories or less in height is typically considered a low-rise building.

3. Buildings that are Constructed. Realty Specialists shall enforce additional standards for buildings that are constructed in response to an SFO.
   a. Buildings shall be in compliance with the most recent edition of the building code, fire code, and ordinances adopted by the jurisdiction in which the building is located. In addition, the offered space shall meet the applicable egress requirements in NFPA 101, Life Safety Code, or an alternative approach or method for achieving a level of safety deemed equivalent and acceptable by the Government.
   b. If the lease provides the Government with an option to purchase, the GSA adopted nationally recognized codes and requirements apply (see latest edition of the Facilities Standards for the Public Buildings Service, PBS-P100), as well as State and local government codes.

4. Temporary Leases. Realty Specialists shall ensure that space leased not longer than 6 months has a valid Certificate of Occupancy and is in compliance with all applicable local codes and ordinances adopted by the jurisdiction in which the building is located.

5. Equivalent Level of Safety Evaluation Procedures. When an Offeror proposes an equivalent level of safety, the Realty Specialist shall require the Offeror to submit, for Government review and approval, a fire protection engineering analysis, performed by a qualified fire protection engineer, demonstrating that an equivalent level of safety for the offered building exists. (See 41 CFR 102-80 for guidance on an equivalent level of safety analysis.)

6. SFO Requirements.
   a. Simplified Lease minimum requirements have been updated on GSA Form 3626, U.S. Government Lease for Real Property (Short Form) (Attachment 2).
b. SFO minimum mandatory requirements for fire protection, safety and environmental paragraphs are –
   i. Certificate of Occupancy (revised paragraph attached),
   ii. Fire Protection and Life Safety (revised paragraph attached),
   iii. OSHA Requirements,
   iv. Asbestos (choose one),
   v. Radon in Air (choose one),
   vi. Hazardous Materials,
   vii. Ventilation,
   viii. Indoor Air Quality, and

c. Several SFO safety and environmental paragraphs are mandatory under certain conditions. Those paragraphs are –
   i. Automatic Fire Sprinkler System (revised paragraph attached),
   ii. Fire Alarm Systems (revised paragraph attached),
   iii. Radon in Water - Use when water will be supplied from a non-public source.
   iv. Recycling - Use when State or local law, code, or ordinance require recycling programs for the space to be provided or where local markets for recovered materials exist.
   v. Elevators - Use when space will be offered in multi-story buildings.

d. Leasing forms and the SFO with all mandatory and optional paragraphs are available at http://insite.pbs.qsa.gov/leasingform/standcla.htm and at www.qsa.qovileasinqform/. Realty Specialists are encouraged to update their individual solicitations on a transactional basis to communicate this additional submittal requirement.
The Government of the United States of America is seeking to lease approximately ___________ rentable square feet of ______________ space located in ______________ for occupancy not later than ______________ (date).

for a term of ______________. Rentable space must yield a minimum of ______________ square feet of ANSI/BOMA Office Area (previously Usable) for use by Tenant for personnel, furnishing, and equipment.

INITIAL OFFERS ARE DUE ON OR BEFORE CLOSE OF BUSINESS ______________.

B. STANDARD CONDITIONS AND REQUIREMENTS

The following standard conditions and requirements shall apply to any premises offered for lease to the UNITED STATES OF AMERICA (hereinafter called the GOVERNMENT):

Space offered must be in a quality building of sound and substantial construction, either a new, modern building or one that has undergone restoration or rehabilitation for the intended use.

The Lessor shall provide a valid Certificate of Occupancy for the intended use of the Government and shall meet, maintain, and operate the building in conformance with all applicable current (as of the date of this solicitation) codes and ordinances. If space is offered in a building to be constructed for lease to the Government, the building must be in compliance with the most recent edition of the building code, fire code, and ordinances adopted by the jurisdiction in which the building is located.

Offered space shall meet or be upgraded to meet the applicable egress requirements in National Fire Protection Association (NFPA) 101, Life Safety Code or an alternative approach or method for achieving a level of safety deemed equivalent and acceptable by the Government. Offered space located below-grade, including parking garage areas, and all areas referred to as "hazardous areas" (defined in NFPA 101) within the entire building (including non-Government areas), shall be protected by an automatic sprinkler system or an equivalent level of safety. Additional automatic fire sprinkler requirements will apply when offered space is located on or above the 6th floor. Unrestricted access to a minimum of two remote exits shall be provided on each floor of Government occupancy. Scissor stairs shall be counted as only one approved exit. Open-air exterior fire escapes will not be counted as an approved exit. Additional fire alarm system requirements will apply when offered space is located 2 or more stories in height above the lowest level of exit discharge.

The leased space shall be free of all asbestos containing materials, except undamaged asbestos flooring in the space or undamaged boiler or pipe insulation outside the space, in which case an asbestos management program conforming to Environmental Protection Agency guidance shall be implemented. The space shall be free of other hazardous materials according to applicable Federal, State, and local environmental regulations.

Services, utilities, and maintenance will be provided daily, extending from ______________ a.m. to ______________ p.m. except Saturday, Sunday, and Federal holidays. The Government shall have access to the leased space at all times, including the use of electrical services, toilets, lights, elevators, and Government office machines without additional payment.

The Lessor shall complete any necessary alterations within ______________ days after receipt of approved layout drawings.

2. SERVICES AND UTILITIES (To be provided by Lessor as part of rent)

ELECTRICITY
POWER (Special Equip.)
WATER (Hot & Cold)
SNOW REMOVAL

HEAT
TRASH REMOVAL
AIR CONDITIONING
TOILET SUPPLIES

ELEVATOR SERVICE
WINDOW WASHING
CARPET CLEANING
JANITORIAL SERV. & SUPP.

INITIAL & REPLACEMENT LAMPS, TUBES & BALLASTS
PAINTING FREQUENCY
PAINTING SPACE
PAINTING PUBLIC AREAS

OTHER (Specify below)

3. OTHER REQUIREMENTS

Offerors should also include the following with their offers:

The estimated cost to prepare the space for occupancy by the Government and the Offeror’s proposed amortization rate for tenant alterations.

NOTE: All offers are subject to the terms and conditions outlined above, and elsewhere in this solicitation, including the Government’s General Clauses and Representations and Certifications.

4. BASIS OF AWARD

THE ACCEPTABLE OFFER WITH THE LOWEST PRICE PER SQUARE FOOT, ACCORDING TO THE ANSI/BOMA Z65.1-1996 DEFINITION FOR BOMA USABLE OFFICE AREA, WHICH MEANS "THE AREA WHERE A TENANT NORMALLY HOUSES PERSONNEL AND/OR FURNITURE, FOR WHICH A MEASUREMENT IS TO BE COMPUTED."

OFFER MOST ADVANTAGEOUS TO THE GOVERNMENT, WITH THE FOLLOWING EVALUATION FACTORS BEING

- SIGNIFICANTLY MORE IMPORTANT THAN PRICE
- APPROXIMATELY EQUAL TO PRICE
- SIGNIFICANTLY LESS IMPORTANT THAN PRICE

(Listed in descending order; unless stated otherwise)
PART II - OFFER (To be completed by Offeror/Owner)

A. LOCATION AND DESCRIPTION OF PREMISES OFFERED FOR LEASE BY GOVERNMENT

5. NAME AND ADDRESS OF BUILDING (Include ZIP Code)

6. LOCATION(S) IN BUILDING

7. AMOUNT OF ANNUAL RENT

8. RATE PER MONTH

B. TERM

To have and to hold, for the term commencing on _____________ and continuing through _____________ inclusive. The Government may terminate this lease at any time on or after _____________, by giving at least _____________ days notice in writing to the Lessor. No rental shall accrue after the effective date of termination. Said notice shall be computed commencing with the day after the date of mailing.

C. RENTAL

Rent shall be payable in arrears and will be due on the first workday of each month. When the date for commencement of the lease falls after the 15th day of the month, the initial rental payment shall be due on the first workday of the second month following the commencement date. Rent for a period of less than a month shall be prorated.

9. MAKE CHECKS PAYABLE TO (Name and address)

10a. NAME AND ADDRESS OF OWNER (Include ZIP code. If requested by the Government and the owner is a partnership or joint venture, list all General Partners, using a separate sheet, if necessary.)

10b. TELEPHONE NUMBER OF OWNER

11. TYPE OF INTEREST IN PROPERTY OF PERSON SIGNING

<p>| | |</p>
<table>

12. NAME OF OWNER OR AUTHORIZED AGENT

13. TITLE OF PERSON SIGNING

14. SIGNATURE OF OWNER OR AUTHORIZED AGENT

15. DATE

16. OFFER REMAINS OPEN UNTIL 4:30 P.M. (Date)

PART III - AWARD (To be completed by Government)

Your offer is hereby accepted. This award consummates the lease which consists of the following documents: (a) this GSA Form 3626, (b) Representations and Certifications, (c) the Government's General Clauses, and (d) the following changes or additions made or agreed to by you:

17a. NAME OF CONTRACTING OFFICER (Type or Print)

17b. SIGNATURE OF CONTRACTING OFFICER

17c. DATE
The Offeror or the Offeror’s representative shall complete this form based on a walk-through of the building or their knowledge of the building’s fire protection and life safety systems. This form consists of a series of short answer and yes/no/not applicable questions related to the building’s fire protection and life safety systems.

1. **Fundamental Code Requirements.**
   a. The offered building shall be evaluated for compliance with the most recent edition of the building and fire code adopted by the jurisdiction in which the building is located; with the exception that the technical egress requirements of the building shall be evaluated based on the egress requirements of the National Fire Protection Association (NFPA) 101, *Life Safety Code*. All areas that do not meet the above stated criteria shall be identified as to the extent that they do comply.

2. **Definitions.**
   a. **Low-Rise Building**: A building less than 75 feet in height where the building height is measured from the lowest level of fire department vehicle access to the floor of the highest occupied floor. A building that is 5 stories or less in height is typically considered a low-rise building.
   b. **Hazardous Areas**: Any space or compartment within a building in which storage or other activity exists that is not part of normal office space arrangements and that possesses the potential for producing a fully involved fire. Such areas used for: the storage or use of combustibles or flammables; toxic, noxious, or corrosive materials; or heat producing appliances, etc. (as defined in the latest edition of NFPA 101, *Life Safety Code*).

The Offeror states, as part of this offer, that the proposed space/building is as described below and that the information provided is accurate. In addition, the Offeror agrees all features and devices described below are in operating order and properly maintained. **THIS SFO PRELEASE FORM WILL BE COMPLETED BY THE OFFEROR OR THE OFFEROR’S REPRESENTATIVE.** Please provide additional pages should this form not provide sufficient space to respond adequately to any question.

FIRE PROTECTION AND LIFE SAFETY EVALUATION FOR A HIGH-RISE OFFICE BUILDING

The Offeror and the licensed fire protection engineer shall complete Parts A and B of this form. Part A consists of a series of short answer and yes/no/not applicable questions related to the building's fire protection and life safety systems. Part B is a detailed narrative report based on a walk-through of the building that includes the review of life safety system preventative maintenance records. The fire protection engineer shall prepare the detailed narrative report. The detailed narrative report and assessment of the building's features and life safety systems shall address at a minimum the items noted in Part B, Office Building Profile; as they apply to the offered building. In addition, the detailed narrative report shall include all deficiencies that do not meet the specified criteria with the associated code reference as well as recommended corrective action(s).

1. Fundamental Code Requirements.
   a. The offered building shall be evaluated for compliance with the most recent edition of the building and fire code adopted by the jurisdiction in which the building is located; with the exception that the technical egress requirements of the building shall be evaluated based on the egress requirements of the National Fire Protection Association (NFPA) 101, Life Safety Code. All areas that do not meet the above stated criteria shall be identified as to the extent that they do comply.

2. Definitions.
   a. High-rise building: A building greater than 75 feet in height where the building height is measured from the lowest level of fire department vehicle access to the floor of the highest occupied floor. A building that is 6 stories or more in height is typically considered a high-rise building.
   b. Hazardous Areas: Any space or compartment within a building in which storage or other activity exists that is not part of normal office space arrangements and that possesses the potential for producing a fully involved fire. Such areas used for: the storage or use of combustibles or flammables; toxic, noxious, or corrosive materials; or heat producing appliances, etc. (as defined in the latest edition of NFPA 101, Life Safety Code).

The Offeror states, as part of this offer, that the proposed space/building is as described below and that the information provided is accurate. In addition, the Offeror agrees all features and devices described below are in operating order and properly maintained. BOTH THE OFFEROR AND THE FIRE PROTECTION ENGINEER WILL MAKE THIS EVALUATION. THE FIRE PROTECTION ENGINEER'S OFFICIAL STAMP (PROFESSIONAL LICENSE) MUST BE PLACED ON BOTH PART A AND PART B. Please provide additional pages should this form not provide sufficient space to respond adequately to any question.
### BUILDING ADDRESS

Building Name:  

Building Address:  

City:  

State:  

9-Digit Zip Code:  

### BUILDING CODE AND FIRE CODE ADOPTED BY LOCAL JURISDICTION

<table>
<thead>
<tr>
<th>Building Code:</th>
<th>YEAR:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fire Code:</td>
<td>YEAR:</td>
</tr>
</tbody>
</table>

### SIZE AND LAYOUT

The following information applies to (check one):  

- [ ] an existing building  
- [ ] a building planned for lease construction  
- [ ] a building planned for lease construction with Government option to purchase  

Identify each floor in which space is offered to Government:  

Identify gross square footage of space offered to Government on each floor:  

Identify height (in feet) of the building above the lowest level of fire department vehicle access:  

Identify the number of floors above the lowest level of fire department vehicle access:  

Identify the number of floors below the lowest level of fire department vehicle access:  

### OTHER OCCUPANCIES IN BUILDING (Check All That Apply)

- [ ] Restaurants  
- [ ] Laboratories  
- [ ] Storage  
- [ ] Retail  
- [ ] Other (list)  

### BUILDING CONSTRUCTION TYPE (Check One)

- [ ] Fire resistive  
- [ ] Heavy Timber  
- [ ] Ordinary  
- [ ] Wood Frame  
- [ ] Unprotective non-combustible  

### VERTICAL OPENINGS (CHECK ONE)

<table>
<thead>
<tr>
<th>Between Two or More Floors</th>

</thead>
<tbody>
<tr>
<td>Exit Stairways</td>
</tr>
<tr>
<td>Shafts</td>
</tr>
<tr>
<td>Atrium</td>
</tr>
<tr>
<td>Other</td>
</tr>
<tr>
<td>None</td>
</tr>
</tbody>
</table>

### ELECTRICAL SYSTEM

Please Check YES, NO, or NA to the following question:  

YES | NO | NA
---|---|---

The building electrical system appears to comply with the NFPA 70, *National Electrical Code* in that there are no obvious deficiencies (e.g., temporary wiring, use of extension cords, deteriorated equipment, missing equipment, etc.). If potential problems are noted, describe on an attached sheet.
## BUILDING EGRESS AND EXITING SYSTEM

Please Check YES, NO, or NA to the following questions:

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>NA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unrestrictive access is provided to a minimum of two exits on each floor.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Scissor stairs count as only one approved exit.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Fire escapes are not counted as an approved exit.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Corridors have a 1-hour fire-resistive rating.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Exit access is at least 44 inches wide.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>All exit stairways terminate directly at a public way or at an exterior exit discharge.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>All exit doors swing in the direction of exit travel.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

## BUILDINGS PROTECTED THROUGHOUT BY AUTOMATIC FIRE SPRINKLERS

Please Check YES, NO, or NA to the following questions:

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>NA</th>
</tr>
</thead>
<tbody>
<tr>
<td>The minimum separation distance between two exits or exit access doors measured in a straight line between the exits or exit access doors shall not be less than one-third the length of the maximum overall diagonal dimension of the building or area served.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The travel distance to the exits is not more than 300 feet.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The maximum length of a dead-end corridor is 50 feet.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The common path of travel is not more than 100 feet in length.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

## BUILDINGS NOT PROTECTED THROUGHOUT BY AUTOMATIC FIRE SPRINKLERS

Please Check YES, NO, or NA to the following questions:

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>NA</th>
</tr>
</thead>
<tbody>
<tr>
<td>The minimum separation distance between two exits or exit access doors measured in a straight line between the exits or exit access doors shall not be less than one-half the length of the maximum overall diagonal dimension of the building or area served.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The travel distance to the exits is not more than 200 feet.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The maximum length of a dead-end corridor is 50 feet.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The common path of travel is not more than 75 feet in length.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

## STANDPIPES AND PORTABLE FIRE EXTINGUISHERS

Please Check YES, NO, or NA to the following questions:

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>NA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standpipes are installed in building.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Portable fire extinguishers are installed in building.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

## BUILDING EXIT HARDWARE AND EGRESS DOORS

Please Check YES, NO, or NA to the following questions:

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>NA</th>
</tr>
</thead>
<tbody>
<tr>
<td>All exit stairway doors are in proper working order.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>All exit stairway doors are self-closing or automatic-closing; and self-latching.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>In an emergency, all exit stairway doors permit re-entry from the exit stairway enclosure to the interior of the building.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Exit doors require one action to open (e.g., no locks, locked during unoccupied periods only).</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NOTE: Special locking arrangements may be permitted if allowed by local jurisdiction.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## AUTOMATIC FIRE SPRINKLERS

<table>
<thead>
<tr>
<th>Question</th>
<th>YES</th>
<th>NO</th>
<th>NA</th>

<td></td>
</tr>
</tbody>
</table>

## Public Address Systems

<table>
<thead>
<tr>
<th>Question</th>
<th>YES</th>
<th>NO</th>
<th>NA</th>
</tr>
</thead>
<tbody>
<tr>
<td>An independent public address system is provided throughout the building.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
1. **General Information.**
   a. Provide a copy of the certificate of occupancy issued by the local building official.
   b. Identify any cited citations or violations noted by the local jurisdiction regarding the building.
   c. Provide digital pictures of the building. Include exterior views showing the front of the building and all sides of the building.
   d. Provide a scaled drawing(s) of the entire floor or floors in which space is being offered in the building. The scaled drawing(s) shall include the locations of all exit stairs and elevators. Indicate on the drawing the proposed space being offered to the Government.
   e. Provide scaled drawings of the floor or floors where all exit stairs discharge.
   f. Identify the number of floors in the building (above and below grade)
   g. Identify the approximate gross square footage per floor in the building.
   h. Identify the proposed floors offered to the Government to occupy.
   i. Identify by location and describe hazardous/significant fuel load areas that, when ignited, would produce significant adverse effects to its buildings and occupants.
   j. Identify and describe potential fire ignition sources in hazardous/significant fuel load areas in the building. The proximity of the fuel source and the ignition source shall be described.

2. **Building Construction.**
   a. Identify and describe the type of construction for floors, walls, columns, and roof of the building.

3. **Occupancy Classifications.**
   a. Identify all the different types of occupancies on each floor of the subject building. Include mechanical equipment areas, storage areas, basement(s), etc.
   b. Identify if the building is separated or non-separated mixed use and what fire rated separation is provided.

4. **Vertical Openings.**
   a. Identify by location and describe the enclosure of vertical openings through floors, such as stairways, hoistways for elevators, escalators, and shafts.
   b. Identify and describe the appropriateness of the firestop systems utilized in all penetrations of the enclosure of the vertical opening.

5. **Means of Egress.**
   a. Identify the number of exit stairs on each floor of the building. Interlocking (scissor) stairs count only as one exit stair.
   b. Identify the number of fire escapes serving the building. Fire escapes shall not be counted as an approved exit.
   c. For each exit stair, identify:
      i. The clear width measurement between handrails.
      ii. The location of where each exit stair discharges.
      iii. If each exit stair enclosure allows re-entry from stair enclosure to the interior of the building.
      iv. Describe all penetrations into and openings through each exit stair enclosure assembly.
      v. Describe any headroom obstruction within each exit stair enclosure.
      vi. Describe if any exit stair has been compromised in such a way to have the potential to interfere with its use as an exit; and
      vii. Exit stair remoteness.
   d. Identify and describe all exit doors that do not swing in the direction of exit travel.
   e. Identify and describe if all exit stair doors are self-closing and self-latching.
   f. Identify and describe if all fire doors are in proper working order.
   g. Identify by floor and describe the exit access system (i.e., corridor or open plan office concept).
   h. Identify by location and describe any concern regarding the exit signage within the building.
   i. Describe the building's emergency lighting system.
PRELEASE
FIRE PROTECTION AND LIFE SAFETY
EVALUATION FOR A HIGH-RISE OFFICE BUILDING

j. Identify and describe if emergency power is provided within the building.
k. If emergency power for life safety systems is provided by generator(s) or UPS systems describe if they are tested and maintained in accordance with NFPA 110, Standard for Emergency and Standby Power Systems or NFPA 111, Standard on Stored Electrical Energy Emergency and Standby Power Systems as applicable.

a. Identify and describe if the building is protected or not protected throughout by an automatic fire sprinkler system. If the building is not protected throughout by an automatic fire sprinkler system, identify areas of the building where partial fire sprinkler protection is provided.
b. Identify and describe all areas within the building that are protected by different types of automatic fire sprinkler systems (e.g., dry, wet, pre-action, etc.).
c. Identify and describe any other fire suppression systems installed within the building.
d. Identify and describe the types of standpipes installed in the building.
e. If automatic fire sprinkler systems are provided in the building describe if they are tested and maintained in accordance with the applicable local codes or NFPA 25, Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.

7. Fire Alarm System.
a. Identify and describe the age, type, manufacturer and model of fire alarm system.
b. Describe if the fire alarm system is connected to a U.L. listed Central Station Service or to the local fire department.
c. Describe in detail the operation of the fire alarm system.
d. Describe how the audible alarm notification appliances are installed and located throughout the building to be effectively heard above normal conditions of occupancy.
e. Describe if the fire alarm system has emergency voice communication capabilities.
f. Identify by location the installation of smoke detectors in the building.
g. Identify by location the installation of heat detectors in the building.
h. Identify by location the installation of duct smoke detectors in the building.
i. Identify and describe the HVAC fan shutdown features.
j. Describe in detail if the fire alarm system is tested and maintained in accordance with the applicable local codes or NFPA 72, National Fire Alarm Code.

8. Interior Finish.
a. Identify carpeting installed in any exit stairs and/or walls within the building.

a. Verify the elevators have a current certificate of elevator inspection from the local jurisdiction.
b. Identify and describe the emergency recall operation features of the elevators. Describe all differences with the requirements of ASME/A17.1, Safety Code for Elevators and Escalators, Phase I Emergency Recall Operation requirements.
c. Identify and describe the emergency in car operation features of the elevators. Describe all differences with the requirements of ASME/A17.1, Safety Code for Elevators and Escalators, Phase II Emergency In-Car Operation requirements.
d. Identify and describe if the elevators are equipped with telephones or other two-way emergency signaling systems connected to an emergency communication location manned during normal working hours when the elevators are in service.
STATEMENT OF FIRE PROTECTION ENGINEER (FPE)

I hereby attest that I have performed a full assessment of the subject premises; and that the above information is complete and accurate to the best of my knowledge. I have initialed at the bottom of each page. My official stamp, professional license information, and signature are affixed below.

I have included findings, recommended corrective action(s), and made specific references to the applicable code sections as an attachment to this report. Such findings specifically identify instances where the building does not comply with the specified criteria, and recommendations have been made in order to rectify the situation and assure substantial compliance of the building to all applicable criteria.

(If no deficiencies were identified, during the evaluation, please explicitly state so in the findings and recommendations portion of the report.)

Signature: ___________________________ Date: __________________
Printed Name: ___________________________
Name of Firm: ___________________________
License Number: ___________________________

Stamp Here:

OFFEROR'S STATEMENT OF CORRECTION

In the event any of the offered space does not meet the above criteria, the Offeror shall attach a sheet describing the exact nature of the deficiency, and the Offeror shall attest below that all work required to bring the offered space into full compliance with all applicable criteria will be completed at the Offeror's sole cost and expense prior to the Government's acceptance of the offered space under the terms of any prospective lease agreement.

NOTE: REPORTS SUBMITTED WITHOUT THE FPE'S FINDINGS, RECOMMENDED CORRECTIVE ACTIONS AND CODE REFERENCES WILL BE RETURNED WITHOUT REVIEW BY THE GSA REGIONAL FIRE PROTECTION ENGINEERING OFFICE.

Signature: ___________________________ Date: __________________
Printed Name: ___________________________
Title: ___________________________
Name of Firm: ___________________________
CERTIFICATE OF OCCUPANCY (MAY 2005)
The Lessor shall provide a valid Certificate of Occupancy, issued by the local jurisdiction, for the intended use of the Government and shall maintain and operate the building in conformance with current local codes and ordinances. If the local jurisdiction does not issue Certificates of Occupancy, the Offeror shall obtain the services of a licensed fire protection engineer to verify the offered space meets all applicable local codes and ordinances to ensure an acceptable level of safety is provided.

FIRE PROTECTION AND LIFE SAFETY (MAY 2005)
A. Offered space shall meet or be upgraded to meet prior to occupancy, the applicable egress requirements in the National Fire Protection Association (NFPA) 101, Life Safety Code, or an alternative approach or method for achieving a level of safety deemed equivalent and acceptable by the Government.

B. Offered space shall provide unrestrictive access to a minimum of two remote exits on each floor of Government occupancy. Scissor stairs shall only be counted as one approved exit. Open air exterior fire escapes shall not be counted as an approved exit.

AUTOMATIC FIRE SPRINKLER SYSTEM (MAY 2005)
A. Offered space located below-grade, including parking garage areas, and all areas in a building referred to as "hazardous areas" (defined in NFPA 101) that are located within the entire building (including non-Government areas) shall be protected by an automatic fire sprinkler system or an equivalent level of safety.

B. For buildings in which any portion of the offered space is on or above the sixth floor, then, at a minimum, the building up to and including the highest floor of Government occupancy shall be protected by an automatic fire sprinkler system or an equivalent level of safety.

C. For buildings in which any portion of the offered space is on or above the sixth floor, and lease of the offered space will result, either individually or in combination with other Government leases in the offered building, in the Government leasing 35,000 square feet or more ANSI/BOMA Office Area square feet of space in the offered building, then the entire building shall be protected throughout by an automatic fire sprinkler system or an equivalent level of safety.

D. Automatic sprinkler system(s) shall be maintained in accordance with the requirements of the applicable local codes or NFPA 25, Standard for the Inspection, Testing, and Maintenance of Water-based Fire Protection Systems.
E. Definitions:

1. “Automatic sprinkler system” means an electronically supervised, integrated system of underground and overhead piping, designed in accordance with National Fire Protection Association (NFPA) 13, *Installation of Sprinkler Systems*. The system is usually activated by heat from fire and discharges water over the fire area. The system includes an adequate water supply.

2. “Equivalent level of safety” means an alternative design or system (which may include automatic sprinkler systems), based upon fire protection engineering analysis, which achieves a level of safety equal to or greater than that provided by automatic sprinkler systems.

FIRE ALARM SYSTEM (MAY 2005)

A. A building-wide fire alarm system shall be installed in buildings in which any portion of the offered space is located 2 or more stories above the lowest level of exit discharge. The fire alarm system shall meet the installation and operational requirements of the applicable local codes and ordinances (current as of the date of this SFO) adopted by the jurisdiction in which the building is located.

B. The fire alarm system shall be maintained in accordance with the requirements of the applicable local codes or NFPA 72, *National Fire Alarm Code*. The fire alarm system wiring and equipment shall be electrically-supervised and shall automatically notify the local fire department or approved central station. Emergency power shall be provided for the fire alarm system.
1. General Requirements.
   a. Realty Specialists shall consult as necessary with the appropriate regional safety specialists, fire protection engineers, and environmental engineers throughout the lease acquisition process.
   b. Realty Specialists shall assure in all leases (except temporary leases) that—
      i. A complete review of open conditions in the Inventory Reporting Information System (IRIS) database is performed and all conditions that do not meet the standards of this Realty Services Letter (RSL) are to be resolved prior to executing leases at the same location. Realty specialists can access the IRIS database at http://pbsportal.pbs.gsa.gov/IRIS_Safety/.
      ii. Offerors are aware of their responsibility to provide and maintain space that is free of hazardous materials according to applicable Federal, State, and local environmental regulations.
      iii. Offerors provide a copy of the valid certificate of occupancy issued by the local jurisdiction prior to occupancy. If the local jurisdiction does not issue a certificate of occupancy, the Offeror shall obtain the services of a licensed fire protection engineer to verify the offered space meets all applicable local codes and ordinances to ensure an acceptable level of safety is provided. Realty Specialists are encouraged to remind offerors of this requirement when sending out letters requesting “Final Proposal Revisions.”
      v. Offerors provide scaled drawing(s) of the entire floor or floors in which space is being offered in the building and of the floor level of exit discharge and that drawing(s) include the locations of all exit stairs, elevators, and the space(s) being offered to the Government. Realty Specialists shall obtain a review of the submitted drawings by a GSA Fire Protection Engineer.
      vi. Offered space provides unrestricted access to a minimum of two remote exits on each floor of Government occupancy.
      vii. Offered space meets or will be upgraded to meet prior to occupancy, the applicable egress requirements in the National Fire Protection Association (NFPA) 101, Life Safety Code, or an alternative approach or method for achieving a level of safety deemed equivalent and acceptable by the Government.
viii. Offered space meets or will be upgraded to meet prior to occupancy, the applicable fire alarm system and automatic fire sprinkler system requirements. See paragraphs 1.c.(i) and 1.c.(ii).

ix. Offered space located below-grade, including parking garage areas, and all hazardous areas within the entire building (including non-Government areas) are protected or will be protected prior to occupancy by automatic fire sprinkler systems or an equivalent level of safety.

x. Scissor stairs are counted as only one approved exit.

xi. Open-air exterior fire escapes are not counted as an approved exit.

c. Where applicable, Realty Specialists shall obtain written confirmation from Offerors to assure that offered space meets or will be upgraded to meet prior to occupancy the applicable fire alarm system and automatic fire sprinkler system requirements described below –

i. Fire alarm system requirements.

(a) A building-wide fire alarm system shall be installed when the Federal Government leases space, in one or more blocks, with some portion of the space located two or more stories in height above the lowest level of exit discharge (typically describes a building 3 stories or more in height). The fire alarm system shall meet the installation and operational requirements of the applicable local codes and ordinances (current as of date of the solicitation) adopted by the jurisdiction in which the offered space is located.

(b) The fire alarm system shall be maintained in accordance with the requirements of the applicable local codes or NFPA 72, National Fire Alarm Code. The fire alarm system wiring and equipment shall be electrically-supervised and shall automatically notify the local fire department or approved central station. Emergency power shall be provided for the fire alarm system.

ii. Automatic fire sprinkler requirements.

(a) When the Federal Government leases space in one or more blocks, with some portion of the space on or above the 6th floor, the building up to and including the highest floor of government occupancy shall be protected by an automatic fire sprinkler system or an equivalent level of safety. This requirement does not apply to lease extensions and to the exercise of renewal options when the initial lease was entered into before the applicability of this RSL.

(b) The Fire Administration Authorization Act of 1992 (Federal Fire Safety Act) requires the following: when the Federal Government leases 35,000 square feet or more of space, in one or more blocks, with some portion of the space on or above the 6th floor, the entire building shall be protected by an automatic fire sprinkler system or an equivalent level of safety. The subject Act does not require the installation of an automatic fire sprinkler system or equivalent level of safety solely as a result of the leasing of additional space below the 6th floor. See paragraph 5, Equivalent Level of Safety Evaluation Procedures, if an Offeror proposes to satisfy this requirement by providing an equivalent level of safety. This requirement does not apply to lease extensions and to the exercise of renewal options when the initial lease was entered into before October 26, 1992.
2. Definitions.
   a. *Hazardous areas* means those areas in a building referred to as hazardous areas in NFPA 101, *Life Safety Code*, or any successor standard thereto. Examples include areas used for the storage of combustibles or flammables; toxic, noxious, or corrosive materials; or heat producing appliances, etc.
   b. *Equivalent level of safety* means an alternative design or system (which may include automatic fire sprinkler systems), based upon fire protection engineering analysis, which achieves a level of safety equal to or greater than that provided by automatic fire sprinkler systems. (See 41 CFR 102-80 for guidance on conducting an equivalent level of safety analysis.)
   c. *Automatic fire sprinkler system* means an electronically supervised, integrated system of underground and overhead piping, designed in accordance with NFPA 13, *Standard for the Installation of Sprinkler Systems*. The system is usually activated by heat from a fire and discharges water over the fire area. The system includes an adequate water supply.
   d. *High-Rise building* means a building greater than 75 feet in height where the building height is measured from the lowest level of fire department vehicle access to the floor of the highest occupied floor. A building that is 6 stories or more in height is typically considered a high-rise building.
   e. *Low-Rise building* means a building less than 75 feet in height where the building height is measured from the lowest level of fire department vehicle access to the floor of the highest occupied floor. A building that is 5 stories or less in height is typically considered a low-rise building.

3. Buildings that are Constructed. Realty Specialists shall enforce additional standards for buildings that are constructed in response to an SFO.
   a. Buildings shall be in compliance with the most recent edition of the building code, fire code, and ordinances adopted by the jurisdiction in which the building is located. In addition, the offered space shall meet the applicable egress requirements in NFPA 101, *Life Safety Code*, or an alternative approach or method for achieving a level of safety deemed equivalent and acceptable by the Government.
   b. If the lease provides the Government with an option to purchase, the GSA adopted nationally recognized codes and requirements apply (see latest edition of the Facilities Standards for the Public Buildings Service, PBS-P100), as well as State and local government codes.

4. Temporary Leases. Realty Specialists shall ensure that space leased not longer than 6 months has a valid Certificate of Occupancy and is in compliance with all applicable local codes and ordinances adopted by the jurisdiction in which the building is located.

5. Equivalent Level of Safety Evaluation Procedures. When an Offeror proposes an equivalent level of safety, the Realty Specialist shall require the Offeror to submit, for Government review and approval, a fire protection engineering analysis, performed by a qualified fire protection engineer, demonstrating that an equivalent level of safety for the offered building exists. (See 41 CFR 102-80 for guidance on an equivalent level of safety analysis.)

6. SFO Requirements.
   a. Simplified Lease minimum requirements have been updated on GSA Form 3626, U.S. Government Lease for Real Property (Short Form) (Attachment 2).
b. SFO minimum mandatory requirements for fire protection, safety and environmental paragraphs are –
   i. Certificate of Occupancy (revised paragraph attached),
   ii. Fire Protection and Life Safety (revised paragraph attached),
   iii. OSHA Requirements,
   iv. Asbestos (choose one),
   v. Radon in Air (choose one),
   vi. Hazardous Materials,
   vii. Ventilation,
   viii. Indoor Air Quality, and

c. Several SFO safety and environmental paragraphs are mandatory under certain conditions. Those paragraphs are –
   i. Automatic Fire Sprinkler System (revised paragraph attached),
   ii. Fire Alarm Systems (revised paragraph attached),
   iii. Radon in Water - Use when water will be supplied from a non-public source.
   iv. Recycling - Use when State or local law, code, or ordinance require recycling programs for the space to be provided or where local markets for recovered materials exist.
   v. Elevators - Use when space will be offered in multi-story buildings.

d. Leasing forms and the SFO with all mandatory and optional paragraphs are available at http://insite.pbs.gsa.gov/leasingform/standcla.htm and at www.gsa.gov/leasingform/. Realty Specialists are encouraged to update their individual solicitations on a transactional basis to communicate this additional submittal requirement.
The Government of the United States of America is seeking to lease approximately ________ rentable square feet of ________ space located in ________ for occupancy not later than ________. Rentable space must yield a minimum of ________ square feet of ANSI/BOMA Office Area (previously Usable) for use by Tenant for personnel, furnishing, and equipment.

INITIAL OFFERS ARE DUE ON OR BEFORE CLOSE OF BUSINESS ________________.

The Lessor shall complete any necessary alterations within ________ days after receipt of approved layout drawings.

The leased space shall be free of all asbestos containing materials, except undamaged asbestos flooring in the space or undamaged boiler or pipe insulation outside the space, in which case an asbestos management program conforming to Environmental Protection Agency guidance shall be implemented. The space shall be free of other hazardous materials according to applicable Federal, State, and local environmental regulations.

Services, utilities, and maintenance will be provided daily, extending from ________ a.m. to ________ p.m. except Saturday, Sunday, and Federal holidays. The Government shall have access to the leased space at all times, including the use of electrical services, toilets, lights, elevators, and Government office machines without additional payment.

The Lessor shall provide a valid Certificate of Occupancy for the intended use of the Government and shall meet, maintain, and operate the building in conformance with all applicable current (as of the date of this solicitation) codes and ordinances. If space is offered in a building to be constructed for lease to the Government, the building must be in compliance with the most recent edition of the building code, fire code, and ordinances adopted by the jurisdiction in which the building is located.

Offered space shall meet or be upgraded to meet the applicable egress requirements in National Fire Protection Association (NFPA) 101, Life Safety Code or an alternative approach or method for achieving a level of safety deemed equivalent and acceptable by the Government. Offered space located below-grade, including parking garage areas, and all areas referred to as "hazardous areas" (defined in NFPA 101) within the entire building (including non-Government areas), shall be protected by an automatic sprinkler system or an equivalent level of safety. Additional automatic fire sprinkler requirements will apply when offered space is located on or above the 6th floor. Unrestricted access to a minimum of two remote exits shall be provided on each floor of Government occupancy. Scissor stairs shall be counted as only one approved exit. Open-air exterior fire escapes will not be counted as an approved exit. Additional fire alarm system requirements will apply when offered space is located 2 or more stories in height above the lowest level of exit discharge.

The Lessor shall comply with the following conditions and requirements:

1. The leased space shall be free of corrosives, other flammable liquids, or other hazardous materials, to the extent not already present.
2. The Lessor shall ensure that occupied spaces are not affected by mechanical or electrical equipment having the potential to generate heat or other hazardous conditions.
3. The Lessor shall ensure that the space is in compliance with the applicable laws and regulations concerning accessibility.
4. The Lessor shall ensure that the space is in compliance with applicable laws and regulations concerning air quality.
5. The Lessor shall ensure that the space is in compliance with applicable laws and regulations concerning fire protection.
6. The Lessor shall ensure that the space is in compliance with applicable laws and regulations concerning safety.
7. The Lessor shall ensure that the space is in compliance with applicable laws and regulations concerning sanitation.

The estimated cost to prepare the space for occupancy by the Government and the Offeror’s proposed amortization rate for tenant alterations.

NOTE: All offers are subject to the terms and conditions outlined above, and elsewhere in this solicitation, including the Government’s General Clauses and Representations and Certifications.

BASIS OF AWARD:

- OFFER MOST ADVANTAGEOUS TO THE GOVERNMENT, WITH THE FOLLOWING EVALUATION FACTORS BEING
  - SIGNIFICANTLY MORE IMPORTANT THAN PRICE
  - APPROXIMATELY EQUAL TO PRICE
  - SIGNIFICANTLY LESS IMPORTANT THAN PRICE

(Listed in descending order, unless stated otherwise):
PART II - OFFER (To be completed by Offeror/Owner)

A. LOCATION AND DESCRIPTION OF PREMISES OFFERED FOR LEASE BY GOVERNMENT

5. NAME AND ADDRESS OF BUILDING (Include ZIP Code)

6. LOCATION(S) IN BUILDING
   a. FLOOR(S)
   b. ROOM NUMBER(S)
   c. RENTABLE SQ. FT.
   d. TYPE
      [ ] GENERAL OFFICE [ ] OTHER (Specify)
      [ ] WAREHOUSE

B. TERM

To have and to hold, for the term commencing on ____________________________ and continuing through
__________________________ inclusive. The Government may terminate this lease at any time on or after
__________________________ , by giving at least ____________ days notice in writing to the Lessor. No rental shall accrue after
the effective date of termination. Said notice shall be computed commencing with the day after the date of mailing.

C. RENTAL

Rent shall be payable in arrears and will be due on the first workday of each month. When the date for commencement of the lease falls after the 15th day of the month, the initial rental payment shall be due on the first workday of the second month following the commencement date. Rent for a period of less than a month shall be prorated.

7. AMOUNT OF ANNUAL RENT

8. RATE PER MONTH

10a. NAME AND ADDRESS OF OWNER (Include ZIP code. If requested by the Government and the owner is a partnership or joint venture, list all General Partners, using a separate sheet, if necessary.)

10b. TELEPHONE NUMBER OF OWNER

11. TYPE OF INTEREST IN PROPERTY OF PERSON SIGNING
     [ ] OWNER [ ] AUTHORIZED AGENT [ ] OTHER (Specify)

12. NAME OF OWNER OR AUTHORIZED AGENT

13. TITLE OF PERSON SIGNING

14. SIGNATURE OF OWNER OR AUTHORIZED AGENT

15. DATE

16. OFFER REMAINS OPEN UNTIL 4:30 P.M. ____________________________ (Date)

PART III - AWARD (To be completed by Government)

Your offer is hereby accepted. This award consummates the lease which consists of the following documents: (a) this GSA Form 3626, (b) Representations and Certifications, (c) the Government’s General Clauses, and (d) the following changes or additions made or agreed to by you:

THIS DOCUMENT IS NOT BINDING ON THE GOVERNMENT OF THE UNITED STATES OF AMERICA UNLESS SIGNED BELOW BY AUTHORIZED CONTRACTING OFFICER.

17a. NAME OF CONTRACTING OFFICER (Type or Print)

17b. SIGNATURE OF CONTRACTING OFFICER

17c. DATE

Page 2 of 2
The Offeror or the Offeror’s representative shall complete this form based on a walk-through of the building or their knowledge of the building’s fire protection and life safety systems. This form consists of a series of short answer and yes/no/not applicable questions related to the building’s fire protection and life safety systems.

1. **Fundamental Code Requirements.**
   a. The offered building shall be evaluated for compliance with the most recent edition of the building and fire code adopted by the jurisdiction in which the building is located; with the exception that the technical egress requirements of the building shall be evaluated based on the egress requirements of the National Fire Protection Association (NFPA) 101, *Life Safety Code*. All areas that do not meet the above stated criteria shall be identified as to the extent that they do comply.

2. **Definitions.**
   a. Low-Rise Building: A building less than 75 feet in height where the building height is measured from the lowest level of fire department vehicle access to the floor of the highest occupied floor. A building that is 5 stories or less in height is typically considered a low-rise building.
   b. Hazardous Areas: Any space or compartment within a building in which storage or other activity exists that is not part of normal office space arrangements and that possesses the potential for producing a fully involved fire. Such areas used for: the storage or use of combustibles or flammables; toxic, noxious, or corrosive materials; or heat producing appliances, etc. (as defined in the latest edition of NFPA 101, *Life Safety Code*).

The Offeror states, as part of this offer, that the proposed space/building is as described below and that the information provided is accurate. In addition, the Offeror agrees all features and devices described below are in operating order and properly maintained. **THIS SFO PRELEASE FORM WILL BE COMPLETED BY THE OFFEROR OR THE OFFEROR’S REPRESENTATIVE.** Please provide additional pages should this form not provide sufficient space to respond adequately to any question.

### Building Address

### Size and Layout

The following information applies to (check one):

- [ ] an existing building
- [ ] a building planned for lease construction
- [ ] a building planned for lease construction with Government option to purchase

Identify each floor in which space is offered to Government:

Identify gross square footage of space offered to Government on each floor:

Identify height (in feet) of the building above the lowest level of fire department vehicle access:

Identify the number of floors above the lowest level of fire department vehicle access:

Identify the number of floors below the lowest level of fire department vehicle access:

### Other Occupancies in Building (Check All That Apply)

- [ ] Restaurants
- [ ] Laboratories
- [ ] Storage
- [ ] Retail
- [ ] Other (list)
## FIRE PROTECTION AND LIFE SAFETY
### EVALUATION FOR A LOW-RISE OFFICE BUILDING

#### BUILDING CONSTRUCTION TYPE (Check One)
- [ ] Fire resistive
- [ ] Heavy Timber
- [ ] Ordinary
- [ ] Wood Frame
- [ ] Unprotective non-combustible

#### VERTICAL OPENINGS (CHECK ONE)
- Between Two or More Floors
  - Exit Stairways: [ ] open [ ] enclosed with doors, provide description
  - Shafts: [ ] open [ ] enclosed, provide description
  - Atrium: [ ] open [ ] enclosed, provide description
  - Other: [ ] open [ ] enclosed, provide description
  - None

#### ELECTRICAL SYSTEM
Please Check YES, NO, or NA to the following question:
- YES  NO  NA
  The building electrical system appears to comply with the NFPA 70, *National Electrical Code* in that there are no obvious deficiencies (e.g., temporary wiring, use of extension cords, deteriorated equipment, missing equipment, etc.). If potential problems are noted, describe on an attached sheet.

#### BUILDING EGRESS AND EXITING SYSTEM
Please Check YES, NO, or NA to the following questions:
- YES  NO  NA
  - Unrestrictive access is provided to a minimum of two exits on each floor.
  - Scissor stairs count as only one approved exit.
  - Fire escapes are not counted as an approved exit.
  - Corridors have a 1-hour fire-resistive rating.
  - Exit access is at least 44 inches wide.
  - All exit stairways terminate directly at a public way or at an exterior exit discharge.
  - All exit doors swing in the direction of exit travel.

#### BUILDINGS PROTECTED THROUGHOUT BY AUTOMATIC FIRE SPRINKLERS
Please Check YES, NO, or NA to the following questions:
- YES  NO  NA
  - The minimum separation distance between two exits or exit access doors measured in a straight line between the exits or exit access doors shall not be less than one-third the length of the maximum overall diagonal dimension of the building or area served.
  - The travel distance to the exits is not more than 300 feet.
  - The maximum length of a dead-end corridor is 50 feet.
  - The common path of travel is not more than 100 feet in length.

#### BUILDINGS NOT PROTECTED THROUGHOUT BY AUTOMATIC FIRE SPRINKLERS
Please Check YES, NO, or NA to the following questions:
- YES  NO  NA
  - The minimum separation distance between two exits or exit-access doors measured in a straight line between the exits or exit-access doors shall not be less than one-half the length of the maximum overall diagonal dimension of the building or area served.
  - The travel distance to the exits is not more than 200 feet.
  - The maximum length of a dead-end corridor is 50 feet.
  - The common path of travel is not more than 75 feet in length.

The Offeror and the licensed fire protection engineer shall complete Parts A and B of this form. Part A consists of a series of short answer and yes/no/not applicable questions related to the building’s fire protection and life safety systems. Part B is a detailed narrative report based on a walk-through of the building that includes the review of life safety system preventative maintenance records. The fire protection engineer shall prepare the detailed narrative report. The detailed narrative report and assessment of the building’s features and life safety systems shall address at a minimum the items noted in Part B, Office Building Profile; as they apply to the offered building. In addition, the detailed narrative report shall include all deficiencies that do not meet the specified criteria with the associated code reference as well as recommended corrective action(s).

1. **Fundamental Code Requirements.**
   a. The offered building shall be evaluated for compliance with the most recent edition of the building and fire code adopted by the jurisdiction in which the building is located; with the exception that the technical egress requirements of the building shall be evaluated based on the egress requirements of the National Fire Protection Association (NFPA) 101, *Life Safety Code*. All areas that do not meet the above stated criteria shall be identified as to the extent that they do comply.

2. **Definitions.**
   a. **High-rise building:** A building greater than 75 feet in height where the building height is measured from the lowest level of fire department vehicle access to the floor of the highest occupied floor. A building that is 6 stories or more in height is typically considered a high-rise building.
   b. **Hazardous Areas:** Any space or compartment within a building in which storage or other activity exists that is not part of normal office space arrangements and that possesses the potential for producing a fully involved fire. Such areas used for: the storage or use of combustibles or flammables; toxic, noxious, or corrosive materials; or heat producing appliances, etc. (as defined in the latest edition of NFPA 101, *Life Safety Code*).

The Offeror states, as part of this offer, that the proposed space/building is as described below and that the information provided is accurate. In addition, the Offeror agrees all features and devices described below are in operating order and properly maintained. **BOTH THE OFFEROR AND THE FIRE PROTECTION ENGINEER WILL MAKE THIS EVALUATION. THE FIRE PROTECTION ENGINEER’S OFFICIAL STAMP (PROFESSIONAL LICENSE) MUST BE PLACED ON BOTH PART A AND PART B.** Please provide additional pages should this form not provide sufficient space to respond adequately to any question.
**BUILDING ADDRESS**

Building Name: 
Building Address: 
City: 
State: 
9-Digit Zip Code: 

**BUILDING CODE AND FIRE CODE ADOPTED BY LOCAL JURISDICTION**

Building Code: 
Fire Code: 

**SIZE AND LAYOUT**

The following information applies to (check one):  
☐ an existing building  
☐ a building planned for lease construction  
☐ a building planned for lease construction with Government option to purchase  

Identify each floor in which space is offered to Government: 

Identify gross square footage of space offered to Government on each floor: 

Identify the number of floors above the lowest level of fire department vehicle access: 

Identify the number of floors below the lowest level of fire department vehicle access: 

**OTHER OCCUPANCIES IN BUILDING (Check All That Apply)**

☐ Restaurants  
☐ Laboratories  
☐ Storage  
☐ Retail  
☐ Other (list)  

**BUILDING CONSTRUCTION TYPE (Check One)**

☐ Fire resistive  
☐ Heavy Timber  
☐ Ordinary  
☐ Wood Frame  
☐ Unprotective non-combustible  

**VERTICAL OPENINGS (CHECK ONE)**

Between Two or More Floors  
Exit Stairways  
☐ open  
☐ enclosed with doors, provide description  
Shafts  
☐ open  
☐ enclosed, provide description  
Atrium  
☐ open  
☐ enclosed, provide description  
Other  
☐ open  
☐ enclosed, provide description  
None  

**ELECTRICAL SYSTEM**

Please Check YES, NO, or NA to the following question:  

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>NA</th>
</tr>
</thead>
</table>

The building electrical system appears to comply with the NFPA 70, *National Electrical Code* in that there are no obvious deficiencies (e.g., temporary wiring, use of extension cords, deteriorated equipment, missing equipment, etc.). If potential problems are noted, describe on an attached sheet.
## BUILDING EGRESS AND EXITING SYSTEM

</tbody>
</table>
1. **General Information.**
   a. Provide a copy of the certificate of occupancy issued by the local building official.
   b. Identify any cited citations or violations noted by the local jurisdiction regarding the building.
   c. Provide digital pictures of the building. Include exterior views showing the front of the building and all sides of the building.
   d. Provide a scaled drawing(s) of the entire floor or floors in which space is being offered in the building. The scaled drawing(s) shall include the locations of all exit stairs and elevators. Indicate on the drawing the proposed space being offered to the Government.
   e. Provide scaled drawings of the floor or floors where all exit stairs discharge.
   f. Identify the number of floors in the building (above and below grade)
   g. Identify the approximate gross square footage per floor in the building.
   h. Identify the proposed floors offered to the Government to occupy.
   i. Identify by location and describe hazardous/significant fuel load areas that, when ignited, would produce significant adverse effects to its buildings and occupants.
   j. Identify and describe potential fire ignition sources in hazardous/significant fuel load areas in the building. The proximity of the fuel source and the ignition source shall be described.

2. **Building Construction.**
   a. Identify and describe the type of construction for floors, walls, columns, and roof of the building.

3. **Occupancy Classifications.**
   a. Identify all the different types of occupancies on each floor of the subject building. Include mechanical equipment areas, storage areas, basement(s), etc.
   b. Identify if the building is separated or non-separated mixed use and what fire rated separation is provided.

4. **Vertical Openings.**
   a. Identify by location and describe the enclosure of vertical openings through floors, such as stairways, hoistways for elevators, escalators, and shafts.
   b. Identify and describe the appropriateness of the firestop systems utilized in all penetrations of the enclosure of the vertical opening.

5. **Means of Egress.**
   a. Identify the number of exit stairs on each floor of the building. Interlocking (scissor) stairs count only as one exit stair.
   b. Identify the number of fire escapes serving the building. Fire escapes shall not be counted as an approved exit.
   c. For each exit stair, identify:
      i. The clear width measurement between handrails.
      ii. The location of where each exit stair discharges.
      iii. If each exit stair enclosure allows re-entry from stair enclosure to the interior of the building.
      iv. Describe all penetrations into and openings through each exit stair enclosure assembly.
      v. Describe any headroom obstruction within each exit stair enclosure.
      vi. Describe if any exit stair has been compromised in such a way to have the potential to interfere with its use as an exit; and
      vii. Exit stair remoteness.
   d. Identify and describe all exit doors that do not swing in the direction of exit travel.
   e. Identify and describe if all exit stair doors are self-closing and self-latching.
   f. Identify and describe if all fire doors are in proper working order.
   g. Identify by floor and describe the exit access system (i.e., corridor or open plan office concept).
   h. Identify by location and describe any concern regarding the exit signage within the building.
   i. Describe the building’s emergency lighting system.
j. Identify and describe if emergency power is provided within the building.

k. If emergency power for life safety systems is provided by generator(s) or UPS systems describe if they are tested and maintained in accordance with NFPA 110, Standard for Emergency and Standby Power Systems or NFPA 111, Standard on Stored Electrical Energy Emergency and Standby Power Systems as applicable.

   a. Identify and describe if the building is protected or not protected throughout by an automatic fire sprinkler system. If the building is not protected throughout by an automatic fire sprinkler system, identify areas of the building where partial fire sprinkler protection is provided.
   b. Identify and describe all areas within the building that are protected by different types of automatic fire sprinkler systems (e.g., dry, wet, pre-action, etc.).
   c. Identify and describe any other fire suppression systems installed within the building.
   d. Identify and describe the types of standpipes installed in the building.
   e. If automatic fire sprinkler systems are provided in the building describe if they are tested and maintained in accordance with the applicable local codes or NFPA 25, Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.

7. Fire Alarm System.
   a. Identify and describe the age, type, manufacturer and model of fire alarm system.
   b. Describe if the fire alarm system is connected to a U.L. listed Central Station Service or to the local fire department.
   c. Describe in detail the operation of the fire alarm system.
   d. Describe how the audible alarm notification appliances are installed and located throughout the building to be effectively heard above normal conditions of occupancy.
   e. Describe if the fire alarm system has emergency voice communication capabilities.
   f. Identify by location the installation of smoke detectors in the building.
   g. Identify by location the installation of heat detectors in the building.
   h. Identify by location the installation of duct smoke detectors in the building.
   i. Identify and describe the HVAC fan shutdown features.
   j. Describe in detail if the fire alarm system is tested and maintained in accordance with the applicable local codes or NFPA 72, National Fire Alarm Code.

8. Interior Finish.
   a. Identify carpeting installed in any exit stairs and/or walls within the building.

   a. Verify the elevators have a current certificate of elevator inspection from the local jurisdiction.
   b. Identify and describe the emergency recall operation features of the elevators. Describe all differences with the requirements of ASME/A17.1, Safety Code for Elevators and Escalators, Phase I Emergency Recall Operation requirements.
   c. Identify and describe the emergency in car operation features of the elevators. Describe all differences with the requirements of ASME/A17.1, Safety Code for Elevators and Escalators, Phase II Emergency In-Car Operation requirements.
   d. Identify and describe if the elevators are equipped with telephones or other two-way emergency signaling systems connected to an emergency communication location manned during normal working hours when the elevators are in service.
STATEMENT OF FIRE PROTECTION ENGINEER (FPE)

I hereby attest that I have performed a full assessment of the subject premises; and that the above information is complete and accurate to the best of my knowledge. I have initialed at the bottom of each page. My official stamp, professional license information, and signature are affixed below.

I have included findings, recommended corrective action(s), and made specific references to the applicable code sections as an attachment to this report. Such findings specifically identify instances where the building does not comply with the specified criteria, and recommendations have been made in order to rectify the situation and assure substantial compliance of the building to all applicable criteria.

(If no deficiencies were identified, during the evaluation, please explicitly state so in the findings and recommendations portion of the report.)

Stamp Here:

OFFEROR'S STATEMENT OF CORRECTION

In the event any of the offered space does not meet the above criteria, the Offeror shall attach a sheet describing the exact nature of the deficiency, and the Offeror shall attest below that all work required to bring the offered space into full compliance with all applicable criteria will be completed at the Offeror's sole cost and expense prior to the Government's acceptance of the offered space under the terms of any prospective lease agreement.

NOTE: REPORTS SUBMITTED WITHOUT THE FPE'S FINDINGS, RECOMMENDED CORRECTIVE ACTIONS AND CODE REFERENCES WILL BE RETURNED WITHOUT REVIEW BY THE GSA REGIONAL FIRE PROTECTION ENGINEERING OFFICE.

Signature: __________________________________________ Date: __________________
Printed Name: _________________________________________
Title: _________________________________________________
Name of Firm: __________________________________________
CERTIFICATE OF OCCUPANCY (MAY 2005)
The Lessor shall provide a valid Certificate of Occupancy, issued by the local jurisdiction, for the intended use of the Government and shall maintain and operate the building in conformance with current local codes and ordinances. If the local jurisdiction does not issue Certificates of Occupancy, the Offeror shall obtain the services of a licensed fire protection engineer to verify the offered space meets all applicable local codes and ordinances to ensure an acceptable level of safety is provided.

FIRE PROTECTION AND LIFE SAFETY (MAY 2005)

A. Offered space shall meet or be upgraded to meet prior to occupancy, the applicable egress requirements in the National Fire Protection Association (NFPA) 101, *Life Safety Code*, or an alternative approach or method for achieving a level of safety deemed equivalent and acceptable by the Government.

B. Offered space shall provide unrestrictive access to a minimum of two remote exits on each floor of Government occupancy. Scissor stairs shall only be counted as one approved exit. Open air exterior fire escapes shall not be counted as an approved exit.

AUTOMATIC FIRE SPRINKLER SYSTEM (MAY 2005)

A. Offered space located below-grade, including parking garage areas, and all areas in a building referred to as "hazardous areas" (defined in NFPA 101) that are located within the entire building (including non-Government areas) shall be protected by an automatic fire sprinkler system or an equivalent level of safety.

B. For buildings in which any portion of the offered space is on or above the sixth floor, then, at a minimum, the building up to and including the highest floor of Government occupancy shall be protected by an automatic fire sprinkler system or an equivalent level of safety.

C. For buildings in which any portion of the offered space is on or above the sixth floor, and lease of the offered space will result, either individually or in combination with other Government leases in the offered building, in the Government leasing 35,000 square feet or more ANSI/BOMA Office Area square feet of space in the offered building, then the entire building shall be protected throughout by an automatic fire sprinkler system or an equivalent level of safety.

D. Automatic sprinkler system(s) shall be maintained in accordance with the requirements of the applicable local codes or NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-based Fire Protection Systems*. 
E. **Definitions:**

1. “Automatic sprinkler system” means an electronically supervised, integrated system of underground and overhead piping, designed in accordance with National Fire Protection Association (NFPA) 13, *Installation of Sprinkler Systems*. The system is usually activated by heat from fire and discharges water over the fire area. The system includes an adequate water supply.
2. "Equivalent level of safety" means an alternative design or system (which may include automatic sprinkler systems), based upon fire protection engineering analysis, which achieves a level of safety equal to or greater than that provided by automatic sprinkler systems.

**FIRE ALARM SYSTEM (MAY 2005)**

A. A building-wide fire alarm system shall be installed in buildings in which any portion of the offered space is located 2 or more stories above the lowest level of exit discharge. The fire alarm system shall meet the installation and operational requirements of the applicable local codes and ordinances (current as of the date of this SFO) adopted by the jurisdiction in which the building is located.

B. The fire alarm system shall be maintained in accordance with the requirements of the applicable local codes or NFPA 72, *National Fire Alarm Code*. The fire alarm system wiring and equipment shall be electrically-supervised and shall automatically notify the local fire department or approved central station. Emergency power shall be provided for the fire alarm system.
