In February 2016, Wide Area Network (WAN)/Networx Customers will be able to access electronic Summary billing statements through the Vendor and Customer Self Service (VCSS) website, and will also be able to access VCSS to view and run queries on summarized billing data, collections, and to dispute bills.

VCSS will replace BillView and paper billing statements, and will present Summary billing statements and billing data in new standardized formats. Billing statements produced before February 2016 will still be available in BillView. Customers will also continue to have access to E-MORRIS for Summary and Detailed billing information.

The About GSA changes to IPAC data fields for Wide Area Network (WAN)/Networx customers brochure will help you prepare to load data correctly into your internal systems without disruption. This brochure is designed to be a useful reference for those GSA customers who pull data from Treasury’s Intergovernmental Payment and Collection System (IPAC) into their accounting systems.

Federal standards make interagency interactions easier, so GSA complies with Common Government-wide Accounting Classification (CGAC), Financial Systems Integration Office (FSIO) Standards, and the Treasury Financial Manual (TFM) Publications and Guidance. To more fully align with these standards, we will be making changes to how we populate the IPAC records.

Please use this brochure as a guide on how to load data correctly into your internal systems when these changes take effect in February 2016.

We will continue to communicate with you to facilitate your transition to VCSS. Please visit gsa.gov/baar for more information.
