A Statement of Work (SOW) is typically used when the task is well-known and can be described in specific terms. Statement of Objective (SOO) and Performance Work Statement (PWS) emphasize performance-based concepts such as desired service outcomes and performance standards. Whereas PWS/SOO's establish high-level outcomes and objectives for performance and PWS's emphasize outcomes, desired results and objectives at a more detailed and measurable level, SOW's provide explicit statements of work direction for the contractor to follow. However, SOW's can also be found to contain references to desired performance outcomes, performance standards, and metrics, which is a preferred approach.

The Table of Content below is informational only and is provided to you for purposes of outlining the PWS/SOO/SOW. This sample is not all inclusive, therefore the reader is cautioned to use professional judgment and include agency specific references to their own PWS/SOO/SOW.

STATEMENT OF WORK

Project Name & ID: ______________

May 1, 2011

1.0 BACKGROUND / SCOPE AND OBJECTIVE / APPLICABLE DOCUMENTS.

1.1 BACKGROUND.

The Agency has established an Architecture and Management Center (AMC) to oversee Enterprise Architecture and System Development Lifecycle (SDLC). The AMC responsibilities include the definition and execution of Information Technology (IT) policies and standards, IT project management and supporting tools, defining and maintaining Agency’s Enterprise Architecture, and implementation of common IT services and applications, and project and source code software repository management.

1.2 SCOPE AND OBJECTIVES.

The contractor shall provide professional IT support services. Services may include:

- Agency’s Enterprise Architecture definition, maintenance, and reporting.
- Alignment of Agency’s Enterprise Architecture with the FEA and Government Enterprise.
- Candidate architectures research and development.
- Agency’s current state application modeling and system inventory management utilizing Agency’s standard EA tools.
- Ongoing definition and execution of AGENCY’s SDLC including IT policies processes and standards.
- Architectural and technical oversight engagements with application development teams.
- Continued implementation and process improvements in the automated build and testing environment including definition and use of application quality metrics.
- Software administration of AGENCY’s Enterprise Architecture repository, source code repositories, change management tools, and automated build and testing software including research of alternative solutions, system upgrades, data migration, related process development and customer support.

The objectives include, but are not limited to, the specific items identified in the subsequent paragraphs.

1.1.1. Current state application modeling to include coordination with ITS and other organizations as part of the modeling efforts, maintenance of system inventories, integration with OCIO IT service management processes, configuration management and change impact analysis and reporting on application deployment. A major objective of this effort is to have well documented current state application deployment detail and to provide information to enable sound configuration management. This activity includes capturing Agency’s system inventory and providing related reporting capabilities.

1.1.2 Ongoing definition, documentation, and execution of Agency’s EA and SDLC policies, processes and standards
1.1.3 Architectural and technical oversight engagement activities include long and short term participation with application developments teams providing full SDLC support, developer tool support, mentoring, and architectural design and implementation support with consideration for application performance.

1.1.4 Pioneering new techniques and research of standards from the government and industry to implement best practices, refine knowledge, and provide guidance through assisting or providing formal and informal knowledge transfer to the Agency.

1.1.5 Maintenance of the AGENCY Reference project which is a working example application that demonstrates how software solutions may be implemented according to Agency standards and best practices.

1.1.6 Evaluation of current automated software build processes, recommendation on further adoption and process improvements, definition of metrics to assess value of the automated build and testing process, and ongoing technical support, education, and mentoring to development teams in adoption of automated build and testing tools and processes.

1.1.7 Software administration in support of the EA repository, source code repository, Agency’s standard change management tools, and tools used in the automated build and testing environment. Activities include supporting the AMC in selection and adoption of new tools, migration, system upgrades, and ongoing user support and administration.

1.1.8 Continuous Agency maturation efforts to identify Agency pain points and address these pain points, including process improvements, new process adoption efforts, and tool adoption and support.

1.3 APPLICABLE REGULATIONS AND DOCUMENTS.

The following documents (versions current at time of award) are a part of this contract. Succeeding revisions may be substituted or incorporated as required. The Government will provide access to available documents and technical information as required and upon contractor request for the performance of this task order.

- AGENCY System Development Life Cycle (SDLC).
- Applicable AGENCY Technical Information Advisory (TIA) documents, Information Bulletins and official memos.
- Other policy, procedural, or technical documentation as the government may deem necessary in order to conduct work under this contract.

2.0 TASK REQUIREMENTS.

The Contractor shall provide support for the tasks described in the subsequent paragraphs. The Government representative(s) will provide project-specific tasks assigned through individual work definition forms. The Government representative(s) will provide prioritization requirements for all project specific tasks.

2.1 ENTERPRISE ARCHITECTURE SUPPORT.

In accordance with Government policy, agencies are required to use the Federal EA program which is iterative in nature. Information provided in response to enterprise-level EA activities shall adhere to the format and technologies specified by the Agency Chief Architect. EA support shall include current state modeling, enterprise analysis, target state definitions, and transition plans. In addition, the contractor shall support the continuous maturity of Agency’s EA Program through program and process documentation in alignment with the EA Program charter.

General task requirements may include, but are not limited to, those listed below.
Provide consulting support services to Agency to assist in establishing, documenting, maintaining, and maturing an EA Program that complies with Federal EA guidance, Agency, and unique Agency guidance.

Assist with ensuring that Agency-level EA processes and tools support the Government EA.

Provide EA practice thought leadership and technical implementation expertise in the design, development, and governance of Service-Oriented Architectures, Web-Oriented Architectures, and Managed Hosting and Cloud Computing Architectures for a large public institution.

Identify, document, recommend, support, and implement full value from EA automated tools.

Provide subject matter expertise to ensure products meet enterprise technology standards for conducting, sustaining, and adapting to the business mission.

Draft, coordinate, maintain and support initial versions of segment architectures for core business and enterprise services, such as Records Management, Workflow and Tracking, Business Intelligence, ERP, Cloud Computing, and Web 2.0.

Work with the Chief Architect to identify, document, and prioritize candidate business and enterprise services segment architectures.

Identify and recommend industry best practices, and where feasible, collect existing information on the selected enterprise services segments through documentation reviews, interviews, as well as the knowledge gained by the Contractor during the portfolio analysis process.

Leverage the Government templates and the TOGAF ADM to document and develop or revise segment architectures for the selected enterprise segments. The results of the segment architecture analyses shall be leveraged for the development of revisions to the Enterprise Architecture Transition Plan that in turn will be aligned with the Department’s portfolio in order to inform and guide IT investment management.

Assist AGENCY OCIO in determining the core AGENCY architecture data fields and establishing the standard analytic processes that will drive decision-making related to the EA and the portfolio.

Conduct an assessment of the Agency portfolio from multiple perspectives to identify, document, and support analytic reporting recommendations on architectural alignment, investment composition, segment architectures, changes to the target architecture, and Transition Plan execution monitoring. The analytics processes shall be designed and executed to ensure consistent, coordinated IT decision-making across Agency. It shall focus on ensuring innovation, the efficient use of IT, reduction of unnecessary duplication, avoidance of cost, optimized information sharing, and interoperability, in accordance with the underlying and consistent theme of having an "actionable EA".

Provide development and implementation support of the EA TP across departmental, Agency, and partner architectural domains at the enterprise, business line, and component levels.

Identify, document, and support performance goals and metrics for Business Architecture, Information Architecture, Application Architecture, and IT Infrastructure and Technology Support from the business strategy through the implementation and maintenance of the EA Program, as well as the “critical points” and sequence activities of the Enterprise Architecture Transition Plan (TP).
Representative task requirements/activities, may include, but are not limited to, those identified in the subsequent paragraphs:

2.1.1 Business Architecture.

- Provide consulting support services to ensure that IT investments effectively support business requirements, are linked to the Agency and Department level Strategic Plans, and provide maximum business value to customers, both internal and external. The business architecture must comply with the guidelines established in the Federal Enterprise Architecture and BRM.
- Work with Information Technology Planning, Architecture and E-Government, and other organizations to complete business and IT architecture planning.
- Provide support for BPR efforts at the Agency and Department level(s).
- Assess business drivers and IT capability gap analysis.
- Develop for Government review and approval, IT vision and business/IT alignment statements.
- Establish and document the alignment of business, functional, and IT goals and objectives.

2.1.2 Information Architecture.

- Provide consulting support services for the planning and implementation of a robust data management program that supports Agency Enterprise Architectures as well as conform to the Federal Enterprise Architecture Program’s DRM.
- Assist in defining, prioritizing, scheduling and executing steps to establish a framework for Data Management Program(s) including: conducting requirements gathering; assessing the As-Is data management situation; performing gap analysis; developing a To-Be data management program; developing a transition plan; and supporting the data management initiative.
- Support the development and maintenance of comprehensive Data Management Programs that include key components such as data architecture; data dictionary; data models; data and metadata repositories; data stewardship; data quality; data acquisition; data usage; and data retention.
- Work with Information Technology Planning, Architecture and E-Government, ITS, NITC and other organizations for data architecture planning and implementation initiatives.

2.1.3 Application Architecture.

- Conduct application architecture initiatives, such as, identifying and classifying application components according to the specific business and performance objectives they support and the technologies they employ.
- Document and perform analyses of the current application inventory and provide detailed application architecture guidelines to improve both business and technology processes and applications in the interest of integration and cost containment. These analyses may include perspectives such as Gartner Magic
Quadrant, interoperability capability, performance and scalability, reliability and availability, application lifecycle stage, and technological risks.

- Provide support to identify and recommend which applications should be delivered, what technologies should be used to deliver them, and how the applications should be designed, deployed and integrated in the most effective and flexible way.
- Support requirements gathering and high-level design for IT application development.
- Analysis of core business activities and business components.
- Support development of business requirements documents.
- Assess and document the alignment of applications/services to Agency programs.
- Work with Information Technology Planning, Architecture and E-Government, ITS, NITC and other organizations to support application architecture planning, implementation, and maintenance.
- Provide support in assessing performance of applications in producing business value and return on investment.

2.1.4 IT Infrastructure & Technology Support.

- Enterprise requirements analyses.
- Work with Information Technology Planning, Architecture and E-Government, ITS, NITC and other organizations to support IT architecture/infrastructure planning, implementation, and maintenance.
- Provide technology assessment evaluation.
- Identify and document hardware and software technology refresh recommendations.
- Review and propose changes to charge-back methodologies.
- Provide support in assessing performance of infrastructure in producing business value and return on investment.

2.2 MAINTENANCE OF AGENCY’S SDLC.

Support is required for ongoing maintenance of Agency’s SDLC, including but not limited to, standards and process updates, Agency-wide communication of changes to the SDLC, SDLC documentation, and posting website updates. All changes shall adhere to Agency change management processes. Historically, 10 to 20 website maintenance updates are required per month and are performed using XXX Content Management tools. Additionally, content updates are required for the AGENCY Architecture SharePoint site and related SharePoint Wiki site as supporting documentation for Agency’s SDLC.

2.3 ARCHITECTURAL ENGAGEMENT SUPPORT.

AMC architectural engagement support has varying contractor support requirements. Individuals assigned to engagement tasks may be embedded within project teams for an extended period of time while in other situations they may be available to provide assistance to development teams on an as-needed basis for short durations, for example to assist with specific technical or design issues. In all cases engagement activities are intended to assist AMC in the promotion of Agency’s EA SDLC as well as to provide service where needed to application development teams.

2.3.1 Engagement Support. Support requirements may include, but are not limited to, those listed below.
- Assisting the government in clarifying the requirements, deliverables, and milestones of the MOU for the engagements.
- Providing senior level JEE development and architectural expertise for the project engagements.
- Supporting alignment with Agency standards and processes (e.g. Enterprise Architecture and CPIC).
- Develop and maintain a collaborative environment within the team designed to build trust and confidence both within the team itself and associated stakeholders.
- Supporting compliance with Agency SDLC processes and standards by mentoring project teams and providing feedback to the government for process improvements.
- JEE project team support
- Automated build support.
- Automated testing support
- Development tool set up and support.

2.3.1.1 Process Improvement Tasks. These tasks are generally of a short duration and involve the contractor performing specific tasks to incorporate lessons learned from engagements into Agency standards and guidelines. Task requirements may include, but are not limited to, those listed below.

- Updating the Agency Reference Project. The Agency Reference Project is an example application that incorporates applicable identified standards and best practices of the Agency. As standards and processes evolve the reference project shall be updated to reflect the evolution within 30 calendar days of when the Government has notified the contractor that an update is required.
- Drafting or revising policies and standards for coordination and approval.
- Creating, revising and/or delivering project management presentations.
- Documenting common issues encountered and recommended resolution to these common issues.
- Documenting common pitfalls to assist project teams.
- Enhancing the SDLC.

2.4 SOFTWARE ADMINISTRATION.

The contractor shall perform a wide variety of software administration activities. Agency relies on ITS and NITC to provide infrastructure services. As a result, Agency is restricted in its access to physical servers and the operating systems of those servers and in some cases the ability to install and configure software on those servers. For the purpose of this task order, software administration refers to the activities associated with COTS packages resident on the physical hardware. These packages currently include those listed below; however, the packages are subject to change over the lifetime of the resultant task order. The contractor shall support future packages as required.

- Enterprise Architecture Repository.
- AGENCY’s Automated Build and Testing environment.
- Subversion.

In addition, the contractor shall provide technical support for the Product X application server environments.

Activities to be performed include, but are not limited to, the following activities:
• Assisting AMC with the development of related policies and best practices.
• Providing users with technical support.
• Notifying AMC management and users of problems and resolution of such problems administering directories.
• Planning and testing disaster recovery procedures.
• Monitoring and reporting on performance.
• Coordinating with the OTC for databases if needed.
• Coordinating with ITS and the NITC for network and server maintenance/patches.
• Coordinating with the ISO for server access procedures.
• Synchronizing data between distributed locations.
• Reviewing support documentation and updating or creating customized documentation as necessary.
• Perform software maintenance.

All tools are subject to change over the life of the resultant task order. At the time of initial task order award, the tools currently in use at Agency include, but are not limited to, those identified in the subsequent paragraphs. Task requirements may include, but are not limited to, those listed in each of the subsequent paragraphs.

2.4.1 Enterprise Developer Tool Administration. The xxxx Suite is Agency’s current solution for software development tools. All components of the Rational suite require the following:

• On daily basis and as necessary based on migration activities, product upgrades, and other software administration changes, the Contractor shall provide related training, application support, project design consulting, and documentation.
• On a monthly basis, provide a report of the Rational toolset floating license utilization including volume usage as an input to the annual product licensing analysis.
• Develop and implement, with team lead and COTR or authorized client representative approval, backup/recovery processes for all Rational environments.

Task requirements for the components of the xxx Suite may include, but are not limited to, those listed the subsequent paragraphs:

2.4.2.1 Rational ClearCase.

• On a daily basis, process user support requests to manage views, activities, and access control.
• MMonitor user activities on a daily basis and make process improvement recommendations to project teams as problems areas are discovered.
• On a daily basis, respond to user requests for assistance related to minor recovery tasks such as reinstituting deleted versions, resolving failed deliveries, failed rebases and baseline tasks.
• Creation of new projects, streams, and merges when necessary.
• On a quarterly basis in addition to ongoing monitoring activities, archive and/or remove outdated projects, streams, activities with application team’s approval.

2.4.2.2 Rational Developer Tools.

• Provide support for crashing applications, licensing issues, etc.
- Coordinate with technical support or help desk when necessary.

2.4.2.3 Rational ClearQuest.

- Process user requests to manage user and project additions, changes, and deletions.
- Modify and implement schema changes and design/deploy reports, report formats, as assigned by the Rational Change Control Board.

2.4.3 Enterprise Architecture Repository Administration.

Product X is Agency’s current solution as the enterprise architecture repository tool. Many of the Mega related tasks shall be performed in collaboration with or under the guidance of the Enterprise Architecture and Configuration Management teams. All changes to the environment shall be approved by the Government team lead and authorized client representative. The tasks identified below are representative, but not all inclusive, of key activities that the Mega administrator shall perform in support of the EA and CM team.

- Perform user administration tasks including Mega module access rights and license control.
- Perform standard repository administration tasks including updates to the Mega product, deploying software patches, data migration, and related administration duties.
- Identify, develop, document, and support implementation of process to address promotion of changes of various repository levels through production. The Contractor shall interface with the Government team lead to determine a schedule for this implementation.
- On a daily basis, as part of normal monitoring activities, validate and reinforce modeling standards and guidelines including development of modeling handbook. Provide report to client task lead on a monthly basis to determine actions to be taken.
- Manage repository security with attention given to various audiences and potentially confidential or sensitive information.
- Coordinate with ITS, NITC, and other organizations in terms of administering, merging, or combining repositories. These activities shall occur on a regular basis, at least weekly but more often if required.
- Prepare and present formal and informal presentations to various levels of the organization and provide formal and informal training to end-users. Formal training shall be scheduled. Informal training shall occur on an as-needed basis based on interactions with end-users.
Develop and document standard and ad hoc reports and other processes to automate Mega functionality as needed. Requests shall be approved by the Mega Change Control Board and prioritized by the Government lead.

Implement and manage the Mega Advisor product and develop and document processes to refresh the data as required. Government lead will collaborate with Contractor to establish implementation schedule.

Contractor shall interface with the Government lead to establish requirements and schedule to customize Mega Advisor based on AGENCY requirements, establish user roles to support data confidentiality, and provide Advisor user guide and related training.

Work with Mega vendor to resolve product and implementation problems.

At least quarterly, review support documentation and update or create customized documentation as necessary to reduce support demand.

2.4.4 Agency’s Automated Build and Testing environment is currently supported by the following Tools:

- Build automation – xxx.
- Repository management software – xxx.
- Continuous integration build software – xxx.
- Security scanning software - Ounce (aka xxx’s Application Scanning for Source Code product).
- Source code repository – Subversion.

The Automated Build and Testing tools requiring administrative support include those listed in each of the subsequent paragraphs. On a quarterly basis, the contractor shall review support documentation and update or create customized documentation as necessary for all of the Automated Build and Testing tools. On a quarterly basis, the contractor shall review releases and patches and collaborate with the Government lead as required to recommend and implement upgrades.

2.4.4.1 Product X.

- The contractor shall interface with ITS and NITC points of contact on at least a weekly basis, or as needed based on urgency of problems, to coordinate server maintenance, backups, restores, and resolving related issues.
- Due to ongoing and frequent problems involving access to the Nexus environment, the contractor shall collaborate with the Government lead and ITS contact to resolve and manage access control as problems occur.
- Coordinate with ITS and NITC for allowing access to industry standard XXX repositories (as IP addresses change, etc).

2.4.4.2 XXX Software, including XXX Scanning Software.
Coordinate with ITS and NITC for server maintenance, backups, restores, and resolving server issues.

Collaborate with the Government lead and ITS contact to resolve and manage access control as problems occur.

On a daily basis, support application developers to resolve build failures due to server issues (such as configuration problems, network communication problems, etc.).

2.4.4.3 Subversion Administration.

Coordinate with ITS and NITC for server maintenance, backups, restores, and resolving related issues.

Due to ongoing and frequent problems involving access to the Subversion environment, the Contractor shall collaborate with the Government lead and ITS contact to resolve and manage access control as problems occur.

On a daily basis, support application developers to manage source code (creating new projects, branching, tagging, merging, etc.) as required.

On a daily basis, assist application developers with minor recovery tasks (such as reinstituting deleted versions, resolving issues with creating a tagged version, etc.).

As part of daily monitoring process, identify and remove outdated projects with approval of the application owner.

The contractor shall support source code repository consolidation efforts from Clear Case and other existing repositories to Subversion. To accomplish this activity, the contractor shall interface with application teams and schedule consolidation activities.

3.0 QUALITY

Both the contractor and Government have responsibilities for providing and ensuring quality services, respectively.

3.1 QUALITY CONTROL

The contractor shall establish and maintain a complete Quality Control Plan (QCP) to ensure the requirements of this contract are provided as specified in accordance with the applicable Inspection of Services Clause. The Contracting Officer (CO) will notify the contractor of acceptance or required modifications to the plan. The contractor shall make appropriate modifications (at no additional costs to the government) and obtain acceptance of the plan by the CO. The Government has the right to require revisions of the QCP (at no cost to the Government) should the incorporated plan fail to control the quality of the services provided at any time during the contract performance. The plan shall include, but is not limited to the following:

- A description of the inspection system covering all services listed.
- The specification of inspection frequency.
- The title of the individual(s) who shall perform the inspection and their organizational placement.
- A description of the methods for identifying, correcting, and preventing defects in the quality of service performed before the level becomes unacceptable.
On-site records of all inspections conducted by the Contractor are required. The format of the inspection record shall include, but is not limited to, the following:

- Date, time, and location of the inspection.
- A signature block for the person who performed the inspection.
- Rating of acceptable or unacceptable.
- Area designated for deficiencies noted and corrective action taken.
- Total number of inspections.

3.2 QUALITY ASSURANCE.

The Government will perform periodic reviews of the contractor’s performance in accordance with the Government’s Quality Assurance Surveillance Plan (QASP) and the Service Delivery Summary (SDS). The Government reserves the right to review services to be provided, including those developed or performed at the Contractor’s facilities, to determine conformity with performance and technical requirements. Government quality assurance will be conducted on behalf of the CO. The Contracting Officer Technical Representative (COTR) will be appointed to coordinate the overall quality assurance of technical compliance.

4.0 DELIVERABLES.

Deliverables and due dates are identified in subsequent paragraphs.

4.1 CONTRACTOR SUBMISSION.

Deliverables are to be transmitted with a cover letter, on the prime contractor’s letterhead, describing the contents, electronically through Government’s web-based procurement system, and to any other destination(s) as required per the Government’s request. The contractor shall provide hard copy deliverables as required per the Government’s request. All deliverables shall be produced using recommended software tools/versions as approved by the Government. All reports shall be accomplished utilizing the MS Office Software Suite to include MS Project as required.

4.2 GOVERNMENT REVIEW.

Government personnel will have 10 workdays to review deliverables (to include resubmissions) and provide written acceptance/rejection. The authorized client representative and/or COTR will notify the contractor of deliverable acceptance or provide comments in writing. The contractor shall incorporate Government comments, or provide rationale for not doing so within 5 days of receipt of comments. Government acceptance of the final deliverable will be based on resolution of Government comments or acceptance of rationale for non-inclusion. Additional changes volunteered by the contractor will be considered a resubmission of the deliverable.

4.3 DELIVERABLE AND DATA RIGHTS.

All test materials, documents, notes, records, software tools acquired, and/or software modified or produced by the contractor under this PWS shall become the property of the U.S. Government, which shall have unlimited rights to all materials and determine the scope of publication and distribution. The contractor shall be required to deliver electronic copies of all documents, notes, records and software to the Government quarterly and upon termination of the contract services or expiration of the contract period.

4.4 MONTHLY INVOICE.

The contractor shall provide a monthly invoice to be submitted simultaneously with the monthly status report. The invoice shall include but not be limited to:
- Labor hours expended. The labor hours expenditure information shall include the identification of the employee name, labor category, hourly labor rate, and total number of labor hours expended.
- Timecards. The contractor shall provide a copy of each employee’s timecard/sheet. The timesheet shall identify the contractor employee name and number of hours claimed per day.
- Travel costs.
- Supporting documentation for travel costs. Invoices including travel costs shall include supporting documentation as required by the Federal Travel Regulation (FTR) (receipts for all costs $75.00 or greater). Invoice submissions including travel costs shall include completed travel expense sheets for each trip for each employee. The required travel expense sheet format.
- The contractor shall comply with line item (per individual positions) billing requests.

4.5 MONTHLY STATUS REPORT.

Monthly status reports shall include status of work definition forms, schedules, deliverables, current and cumulative task funding status (direct labor and travel funding status to be reported separately as required), risks and risk mitigation techniques, outstanding issues, and proposed resolution approaches and actions to resolve any outstanding issues. The report shall identify milestones and deliverables completed and progress towards major milestones and deliverables. The report shall identify activities and deliverables planned but not completed including the government acknowledgement and approval of the incomplete work. Status of work definition forms shall include a summary description and schedule of all work definition forms completed during the reporting period, all work definition forms currently on-going during the reporting period and all known work definition forms assigned for future reporting periods. The monthly invoice shall be submitted simultaneously with the monthly status report.

4.6 MONTHLY WORK PLAN REPORT.

Short and long term work projects shall be planned on a monthly basis identifying projected activities to be accomplished for the next period of performance. The planning activities shall be performed jointly with the client task lead and shall result in a government approved plan of milestones and deliverables to be accomplished during the next monthly period of performance. Longer term milestones and activities shall continue to be included for future planning efforts. The approved monthly plan will be used by the client task lead as input into the preparation of work definitions. Monthly work plan reports shall be completed according to the deliverable matrix below and shall identify all of the work planned for the upcoming month including major milestones, risks, and deliverables for each task element.

4.7 DELIVERABLE MATRIX.

As applicable, the delivery dates shall be based on the approved work definition forms and approved project plans as updated after the completion of the analysis phase for each project. If a delivery date falls on a Federal holiday or Saturday or Sunday, the deliverable due date shall be the next scheduled federal workday. The deliverable due time shall be on or before COB (1700) the day the deliverable is due unless otherwise stated within this PWS.

### 4.8 OTHER REPORTING REQUIREMENTS.

In addition to the deliverable requirements identified above, the contractor shall comply with the following:

- The contractor shall bring problems or potential problems affecting performance to the attention of the COTR as soon as possible. Verbal reports shall be followed up with written reports, when directed by the COTR, within 24 hours.
- The contractor shall provide, in writing to the COTR, the results of all meetings with the client that affect and/or change conditions or result in additional agreements or requirements. The contractor shall not perform any work outside the scope or requirements of this PWS and resultant order without express written approval of the CO.

### 4.9 PAST PERFORMANCE INFORMATION.

In accordance with FAR 42.15 Contractor Performance Information, past performance evaluations shall be prepared for each task order that exceeds the simplified acquisition threshold placed against a Government-wide Acquisition Contract. For severable task orders, interim evaluations will be required prior to exercising any option periods. For non-severable task orders, evaluations must be collected, coordinated and reported upon completion of the task order.

The Government will provide and record Past Performance Information for acquisitions over $100,000 utilizing the Contractor Performance Assessment Reporting System (CPARS). The CPARS allows contractors to view and comment on the Government's evaluation of the contractor's performance before it is finalized. Once the contractor’s past performance evaluation is finalized in CPARS it will be transmitted into the Past Performance Information Retrieval System (PPIRS).

Contractor’s are required to register in CPARS, so contractors may review and comment on past performance reports submitted.

Contractors must register at the following websites:

- CPARS: http://www.cpars.csd.disa.mil/
- PPIRS: http://www.ppirs.gov/
4.10 CONTRACTOR’S PURCHASING SYSTEMS.

The objective of a contractor purchasing system assessment is to evaluate the efficiency and effectiveness with which the contractor spends Government funds and complies with Government policy with subcontracting.

Prior to the award of a task order the Contracting Officer shall verify the validity of the contractor's purchasing system. Thereafter, the contractor is required to certify to the Contracting Officer no later than 30 calendar days prior to the exercise of any options the validity of their purchasing system. Additionally, if reviews are conducted of the purchasing system after the exercise of the option, the contractor shall provide the results of the review to the Contracting Officer within 2 weeks from the date the results are known to the contractor.

4.11 TASK ORDER CLOSEOUT.

The contractor shall submit a final invoice within forty-five (45) calendar days after the end of the Performance Period. After the final invoice has been paid the contractor shall furnish a completed and signed Release of Claims to the Contracting Officer. This release of claims is due within fifteen (15) calendar days of final payment.

5.0 PERFORMANCE.

5.1 CERTIFICATION BY THE GOVERNMENT.

Satisfactory services provided is contingent upon the contractor performing in accordance with the terms and conditions of the referenced contract, this document, the approved technical and cost quotes, and all amendments. The COR, Contracting Officer, and the contractor's representative(s) shall meet when deemed necessary.

5.2 KICKOFF MEETING.

Within five days of the period of performance start date, the Contractor shall initiate work on this contract by meeting with key agency representatives to ensure a common understanding of the requirements, expectations, and ultimate end products. The contractor shall discuss the overall understanding of the project and review the background information and materials provided by the client. Discussions will also include the scope of work, deliverables to be produced, how the efforts will be organized and project conducted; assumptions made/expected and results. A concerted effort shall be made to gain a thorough understanding of the client agency expectations. However, nothing discussed in this or in any subsequent meetings or discussions between the client and the Contractor shall be construed as adding, deleting, or modifying any task order requirements, including deliverable specifications and due dates.

5.3 PERIOD OF PERFORMANCE.

The base period of performance will be 23 Sept 2010 through 22 Sept 2011. The contractor’s quote shall also include four option periods based on a calendar year, which may be exercised at the client’s request based upon the Government’s continuing need, past performance and funding availability.

5.4 PLACE OF PERFORMANCE.

The primary place of performance shall be in Government facilities. The contractor may perform task related activities at contractor facilities within the local area when required and authorized by the Government. Reimbursement for local travel is not authorized.

5.4.1 Travel. The contractor shall also perform travel between the primary places of performance and non-local facilities as required during the performance period of this task order. The COTR shall approve all non-local travel prior to costs being incurred. Travel requests, to include projected costs, shall be submitted to COTR approval no later than five workdays prior to travel. Travel will be handled, to include the reimbursement of expenses, in
accordance with the terms and conditions of the contract and the Federal Travel Regulation guidance. All non-local travel arrangements will be the responsibility of the contractor including, but not limited to, airline, hotel, and rental car reservations. The contractor should make all efforts to schedule travel far enough in advance to take advantage of reduced airfares. The contractor shall stay in Government furnished lodging as available. The contractor shall include a $15,000 travel allowance (subject to modification) in the cost quote.

5.5 HOURS OF WORK.

On-site contractor support shall be available during customer agency normal operating (0700 - 1700). Work shall generally consist of 40-hour workweeks, Monday through Friday, excluding federal holidays. The contractor personnel shall observe all Federal holidays. The contractor shall provide for non-standard duty hours support on an as required basis. Non-standard duty hours or additional hours or times for work to be performed shall be coordinated with the COTR or authorized client representative.

5.5.1 Contingency (“on-call”) Support. The contractor shall provide 24x7 on-call contingency support. The contractor shall include 40 hours for government authorized on-call contingency support. On-call contingency support shall be coordinated with the authorized local Government point of contact and the contractor’s designated on-call support point of contact. On-call contingency support shall be provided within one hour of notification to the contractor’s designated individual. The contractor shall assess the cause, determine the scope of the problem, advise the appropriate Government organization, identify and implement action for problem resolution, and provide an estimated restoration time. The contractor shall provide a single point of contact for all on-call contingency support.

5.6 PERSONNEL RETENTION.

The Contractor shall make every effort to retain personnel in order to ensure continuity until contract completion. If it should become necessary to substitute or replace personnel, the Contractor shall immediately notify the COTR in writing of any potential vacancies and shall make every effort to submit the resume(s) of replacement personnel within 14 calendar days of the notification. The Contractor shall submit the resume(s) of all potential personnel selected to perform under this contract to the COTR for Government review and acceptance/rejection. Upon Government acceptance of a resume(s), the candidate shall be available to begin performance within 14 calendar days. Prior to the submission of resumes, the contractor shall ensure that the candidate(s) satisfy the applicable security requirements to reduce staffing delays. The contractor shall ensure continuity of operations during periods of personnel turnover and long-term absences. Long-term absences are considered those longer than one week in duration.

5.7 ESTIMATED STAFFING LEVEL.

The Government estimates that the base year plus four option years will involve an approximate level-of-effort delineated below in terms of Full-Time-Equivalent (FTE) positions. The total annual number of labor hours for each FTE position shall be 1,920. The offeror shall staff this order with only those personnel possessing qualifications and experience requirements which reflect an ability to perform all responsibilities for the labor category(s) specifically quoted by the offeror to satisfy the requirements of this PWS.

This estimate is being provided to offerors to be used as a “guide” designed to assist in developing the staffing plan and subsequent cost quote. Offerors may reflect a different number of personnel and a different number of labor hours from those provided in this planning estimate. The planning estimate is not intended to limit any offeror’s ability to submit alternative solutions to accomplish task requirements. However, if an offeror quotes differs significantly from those in this planning estimate; then, the offeror is instructed to provide a detailed description to explain the rationale for the deviation. Failure to provide a detailed explanation of any significant variations, will impact the Government’s evaluation of the offeror’s solution.

It is anticipated that the workload will fluctuate based on fluid schedule requirements; therefore, the contractor shall include provisions for optional support (listed as additional positions in the matrix below) throughout the task order life cycle. The actual time frame for the optional support implementation will be dependent upon actual scheduling requirements.

#### 5.8 KEY PERSONNEL.

Designate the minimum personnel that will be considered key personnel and assigned to this task order. The contractor shall propose appropriate labor categories for this (these) position(s). Key personnel must be assigned for the duration of the task order. The Government encourages and will evaluate additional key personnel as proposed by the contractor.

- One (1) Contractor Program Manager
- One (1) Contract Administrator
5.9 GOVERNMENT FURNISHED EQUIPMENT/INFORMATION/ACCESS.

The government will provide the following resources to the contractor for task performance:

- The Government will provide workspace at a government facility for a maximum of funded positions identified in paragraph 5.6.
- The Government will provide all necessary normal office equipment (office work area, telephone, access to fax, computer, e-mail account, software, network access, etc.).
- The Government will provide certain data processing ADP equipment and software, as it may deem necessary, to the contractor for the exclusive purpose of performing the services as defined in the task order.
- The Government will provide access to available technical information (i.e. standard configuration, US directives, etc.) as required and upon contractor request for the performance of this task order.
- All Government-provided products and facilities remain the property of the Government and shall be returned upon completion of the support services. Contractor personnel supporting this requirement shall return all items that were used during the performance of these requirements by the end of the performance period.
- All documented processes, procedures, tools and applications, developed under this PWS become the property of the Government. The Government shall have unlimited rights to these documents. Modification and distribution of end products for use at other installations will be at the discretion of the Government.
- All text, electronic digital files, data, new capabilities or modification of existing applications, source code, documentation, and other products generated, modified or created under this contract shall become the property of the Government. The information shall be returned to the Government unless otherwise specified herein.

6.0 SECURITY.

6.1 CLEARANCE.

All contractor personnel assigned to this task shall have had a successfully adjudicated National Agency Check with (Written) Inquiries (NACI). All contractor personnel shall comply with the specific security requirements. Access to classified documents, studies, reports, and other documentation and information may be required. Consequently, a US Department of Defense Secret clearance adjudication is required. A DD Form 254, "Department of Defense Contract Security Classification Specification," will be provided after award of task order. Contractor personnel assigned under this Task Order must hold US citizenship. The contractor will initiate the appropriate level of security clearance background investigation to result in issuance of a Department of Defense Secret security clearance. Information gathered, developed, analyzed, and produced under this requirement remains the property of the U.S. and shall be protected from unauthorized or inadvertent modification, disclosure, destruction, or use. Prior to the arrival of any contractor employee to commence work under this task order at any Government site, the contractor must provide advance notice to the Government for visitor control purposes and verification of security clearance.

6.2 IDENTIFICATION OF NON-DISCLOSURE REQUIREMENTS.
Due to the sensitive nature of the data and information being worked with on a daily basis, all contractor personnel assigned to the task order are required to complete the Government provided non-disclosure statement within 30 calendar days after task order award to ensure information that is considered sensitive or proprietary is not compromised. Signed non-disclosure statements shall be provided to the COTR.

The component parts of this effort and reports are expected to contain highly sensitive information that could act as a guide for hostile entities to cause harm to the Agency’s critical infrastructure. Any such information made available in any format shall be used only for the purpose of carrying out the provisions of this agreement. Such information shall not be divulged or made known in any manner to any person. The Contractor shall immediately notify the COTR upon discovery of any inadvertent disclosures of information. The Contractor shall not retain any information regarding vulnerabilities, to include summaries, the actual vulnerability report, etc., after the performance period end date. All information arising from this task, both hard copy and electronic, shall be returned to the government at task conclusion.

Given the nature of the professional IT support services that are required, it is imperative that safeguards be in place to ensure procurement integrity and Government functions are maintained. Individuals performing under the resultant task order may often have advance knowledge of requirements and the procurement of those requirements (development, design, analysis, etc.). Information generated in the performance of the resultant task order is not to be released or reviewed outside the Governmental sphere. Quotes in response to this RFQ must address the safeguards to be implemented within the company organizational structure. Each quote shall provide sufficient documentation to detail policy and procedures to ensure that all information acquired while performing under the resultant task order as a technical expert advisor is retained within the Government and is not shared within the company. This requirement is necessary to ensure any contractor performing under the resultant task order will retain eligibility for future consideration. This limitation is governed by the scope of services provided.

6.3 ORGANIZATIONAL CONFLICT OF INTEREST.

If the contractor is currently providing support or anticipates providing support to the U.S. Army that creates or represents an actual or potential organizational conflict of interest (OCI), the contractor shall immediately disclose this actual or potential OCI in accordance with FAR Part 9.5. The contractor is also required to complete and sign an Organizational Conflict of Interest Statement in which the contractor (and any subcontractors, consultants or teaming partners) agree to disclose information concerning the actual or potential conflict with any proposal for any solicitation relating to any work in the TO. All actual or potential OCI situations shall be handled in accordance with FAR Subpart 9.5.

6.4 PRIVACY ACT.

Work on this project requires that personnel have access to Privacy Information. Personnel shall adhere to the Privacy Act, Title 5 of the U.S. Code, Section 552a and applicable agency rules and regulations.

6.5 SAFETY.

The contractor shall comply with all local safety regulations and procedures in effect at the respective installation locations.

7.0 ADMINISTRATIVE CONSIDERATIONS

7.1 GOVERNMENT REPRESENTATIVES:

Xxxxx

7.2 PROCEDURES FOR PAYMENT.

7.2.1 Performance Based Payment Percentages. The attached SDS is provided to identify the performance objectives and respective payment percentages based on relative importance to total task performance. This document also identifies the Government’s proposed surveillance assurance methodology.
7.2.2 Submission. Invoices are due no later than the 15th calendar day of the month following the reporting period. The contractor shall submit the invoices and supporting documents, through IT system simultaneously with the MSR (as an acceptance item) to allow the client representative and the COTR to electronically accept and certify services received by the client representative. The contractor is authorized to invoice only for the services and travel ordered by COTR and provided in direct support of the client’s project requirements. In addition, the contractor shall submit an electronic copy of the invoice to the finance web site by the 15th calendar day of the month following the reported period. The finance submission shall not be submitted prior to the IT system submission.

7.2.3 Failure to comply with the procedures outlined may result in payment being delayed at no additional cost to the Government.

7.3 PERSONAL SERVICE.

The Government determined that use of contractor to satisfy this requirement is in the best interest of the Government, economic and other factors considered, and this task order is not being used to procure personal services prohibited by the Federal Acquisition Regulation (FAR) Part 37.104 titled “Personal Services Contract”.

7.4 COMPLIANCE OF SECTION 508.

All services and products, to include systems and applications, developed and provided in response to the requirements identified in this document shall comply with Section 508 of the Rehabilitation Act of 1973 (29 U.S.C. 794d), and the Architectural and Transportation Barriers Compliance Board Electronic and IT (EIT) Accessibility Standards (36 CFR part 1194).

7.5 TRANSFER OF HARDWARE/SOFTWARE MAINTENANCE AGREEMENTS TO FOLLOW-ON CONTRACTORS.

The contractor shall ensure that all hardware/software agreements entered into under this task order are transferable to the Government and/or to other contractors at the discretion of the Government.

NOTE: Paragraphs I.1 through I.14 of the contractor’s awarded Alliant GWAC contract are applicable to this Task Order and are hereby incorporated by reference. In addition, the following applies.
