

GSA Telematics: Fleet Management Made Easy

Fully Integrated
FedRAMP Authorized
Shared Service Solution
Cradle-to-Grave Management

Make data driven decisions with
GSA Telematics today!

GSA Telematics Program Overview

GSA makes it easy for agencies to adopt telematics as recommended by [EO 13834](#), [Efficient Federal Operations](#). By leveraging its purchasing power, GSA is able to provide the best value to customers that maximize the cost savings from having a shared service telematics program.

Included in the GSA Fleet monthly lease rate, agencies receive a burden-free telematics solution installed on leased vehicles. The solutions allows for the collection of comprehensive vehicle data such as engine diagnostics, maintenance alerts, and true odometer readings to automate monthly mileage reporting and improve maintenance management. Agencies may access additional data and geolocation (GPS) services by purchasing an add-on service subscription with streamlined billing through the monthly GSA Fleet leasing invoice.

Why Telematics?

Telematics is a field of information technology that combines telecommunications and informatics to send, receive, and store data connected with fleet vehicles. The data generated from telematics can better inform fleet managers on how to best manage their fleets. This, in turn, can provide cost savings in areas such as maintenance, driver behavior, reporting, fuel use and idling, as well as inventory optimization.

Why GSA Telematics?

- No agency contracting
- Hardware & installations handled by GSA Fleet
- Monthly mileage reporting automated
- Telematics data summarized & provided quarterly on agency-specific reports
- Additional data & GPS services, if elected, billed to agency via monthly GSA Fleet leasing invoice
- Dedicated training & support for add-on services
