

# EVSE BPA Decision Tree

\* denotes CLINs which are "gateway" stations. At least 1 per 9 networked stations must be a gateway station, in order to obtain data from the non-gateway stations.

## Using the EVSE BPA Decision Tree:

The decision tree above is intended to help agencies determine which Contracting Line Item Number (CLIN) they should be ordering from when placing orders through GSA's EVSE BPA. By answering yes or no questions the user is led to a box containing one or more CLINs that will meet the user's needs. Users can review exactly what type of stations each CLIN contains in the appendix below to confirm this. Users can then compare prices in and amongst the CLINs by reviewing the "All Configurations Awarded" document at [www.gsa.gov/evse](http://www.gsa.gov/evse), and make an acquisition decision.
