Re: San Ysidro Port of Entry Expansion Project, Section 106 Consultation

Attn: Mr. Richard M. Began, Tribal Historic Preservation Officer

Dear Chairman Milanovich,

The U.S. General Services Administration (GSA) is planning to expand and reconfigure the existing facilities at the San Ysidro U.S. Port of Entry (POE). This project is considered an undertaking subject to review under Section 106 (36 CFR Part 800) of the National Historic Preservation Act (NHPA).

The San Ysidro Port of Entry, located between San Diego, CA and Tijuana, Mexico, is the busiest port of entry in the United States (Fig 1). The San Ysidro Port of Entry functions as the inspection point for privately owned vehicles and pedestrians entering and leaving the U.S. As currently configured, the existing POE is insufficient in both space and design to handle the increasing pedestrian and vehicular traffic moving through the facility. Moreover, the Department of Homeland Security (DHS) is implementing programs both to increase security and to improve the flow of traffic at the U.S. borders. These programs require an increase in staff, space, and systems that cannot be accommodated in the current border station configuration (Fig 2).

In order to meet the increased traffic demands and new security programs, GSA is proposing to expand and reconfigure the existing border station. This project will include the demolition and new construction of most of the POE, including the main buildings and other support structures. In addition, a new southbound roadway with inspection facilities will be constructed to connect with Mexico’s El Chaparral facility. The expanded facility will consist of 225,000 square feet of building space, 29 inbound vehicle lanes, two bus lanes, and six outbound vehicle lanes. The project is currently scheduled to be constructed in three phases, possibly commencing in 2010. GSA has carried out master planning studies of the site and has chosen a preferred master plan for the site (Fig 3).

We have determined that the Area of Potential Effect (APE) for this project encompasses the approximately 30 acres bordered by the U.S./Mexico international
border to the south, Virginia Avenue to the west, and Camino de la Plaza to the north. On the east side, the APE is bordered by East San Ysidro Blvd and the railroad tracks (Figs 4-5)

Through consultation with the California Native American Heritage Commission, your tribe has been identified as potentially having a historical connection with the area. We request that you review the enclosed materials and inform us if you believe this project has potential to adversely impact resources significant to your tribe. A Section 106 consultation meeting regarding this project is currently scheduled for February 4, 2009 onsite at the San Ysidro POE. If you would like to participate in this consultation meeting, or if you have any questions, please contact me at jane.lehman@gsa.gov or (415) 522-3098.

Sincerely,

Jane Lehman

Re: San Ysidro Port of Entry Expansion Project, Section 106 Consultation

Dear Chairman Lawson,

The U.S. General Services Administration (GSA) is planning to expand and reconfigure the existing facilities at the San Ysidro U.S. Port of Entry (POE). This project is considered an undertaking subject to review under Section 106 (36 CFR Part 800) of the National Historic Preservation Act (NHPA).

The San Ysidro Port of Entry, located between San Diego, CA and Tijuana, Mexico, is the busiest port of entry in the United States (Fig 1). The San Ysidro Port of Entry functions as the inspection point for privately owned vehicles and pedestrians entering and leaving the U.S. As currently configured, the existing POE is insufficient in both space and design to handle the increasing pedestrian and vehicular traffic moving through the facility. Moreover, DHS is implementing programs both to increase security and to improve the flow of traffic at the U.S. borders. These programs require an increase in staff, space, and systems that cannot be accommodated in the current border station configuration (Fig 2).

In order to meet the increased traffic demands and new security programs, GSA is proposing to expand and reconfigure the existing border station. This project will include the demolition and new construction of most of the POE, including the main buildings and other support structures. In addition, a new southbound roadway with inspection facilities will be constructed to connect with Mexico’s El Chaparral facility. The expanded facility will consist of 225,000 square feet of building space, 29 inbound vehicle lanes, two bus lanes, and six outbound vehicle lanes. The project is currently scheduled to be constructed in three phases, possibly commencing in 2010. GSA has carried out master planning studies of the site and has chosen a preferred master plan for the site (Fig 3).

We have determined that the Area of Potential Effect (APE) for this project encompasses the approximately 30 acres bordered by the U.S./Mexico international border to the south, Virginia Avenue to the west, and Camino de la Plaza to the north.
On the east side, the APE is bordered by East San Ysidro Blvd and the railroad tracks (Figs 4-5)

Through consultation with the California Native American Heritage Commission, your tribe has been identified as potentially having a historical connection with the area. We request that you review the enclosed materials and inform us if you believe this project has potential to adversely impact resources significant to your tribe. A consultation meeting regarding this project is currently scheduled for February 4, 2009 onsite at the San Ysidro POE. If you would like to participate in this consultation meeting, or if you have any questions, please contact me at jane.lehman@gsa.gov or (415) 522-3098.

Sincerely,

Jane Lehman
